Does anyone out there know anything about this reveiver?
I understand that it is an HF ComMunications Receiver - solid state
and was probably manufactured in the late 1960's, possibly for the
Australian Defense Forces.
Thanks Mark

Keeping in mind that I've never used a q-multiplier, I'll mention that
the q-multipliers that I have seen were between the receiver and the
speaker, or mounted in the speaker cabinet.

Yeah.. Herb Johnson built the SW180 and SW140 Swan monobander transceivers in his garage in -- I think -- Benson, Arizona, around 1958 or 59. Then came the SW240 and around that time he moved to Oceanside, down on Mission Blvd. The business sold out to Cubic Corp., then Siltronix, and then..? We used to go to the old Swan parking lot swapmeets all the time.

Herb started Atlas after he sold Swan, producing the Atlas 180 and 210 series. Then everything seemed to wind down for him.

Herb was (still is?) a member of the San Diego Yacht Club. I used to run into him around the docks and during A.R.R.L. conventions. I've sorta lost track of him in the last ten years.. but I heard he tried to resurrect Atlas and had a bit of bad luck.

Couldn't have been a q-multiplier then, because that device operates
within the IF stage of the receiver. Circuit "Q" is a measure of
its bandwith (loosely) and the q-multiplier is really a regenerative
stage that is attached to the IF circuitry to affect the IF response
of the receiver. It can be used to peak or null a signal within
the IF bandpass.

It was never attached to an audio stage, though there may have
been accessories such as a q-multiplier built into a speaker cabinet.
However, I would think that acoustic coupling and feedback would prevent
optimum performance from a q-multiplier if it were mounted near or
inside a
speaker cabinet.

This note was *only* for the handful of folks sub'd to the old
Glowbugs list (whose host site was asking a yearly fee from each
reader); Conard will subscribe them by hand. This note wasn't meant
to be a public invitation to email him and have him do all the subs
manually.

Hello:

I have the following 4-"AUDIO" Engineering magazines for sale.
These are all from 1956...and are in Nice Condition...and very clean.
These are large sized magazines full of Vintage 1950's HIFI Articles
and Great Ads from the early days of Audio/HIFI. They are very hard to
find. I am only selling these because they are duplicates.

PRICE is $10.00 USA each per magazine...plus Shipping of $2.00 USA
Each. ($12.00 USA Total)each.

Please email me direct at .... radiorob@serix.com to reserve any
of these magazines.

Jan 1956

March 1956

Sept. 1956

Oct. 1956

Thanks...ROB.

2495. Two kinds of 6BJ6 tubes? pentode or triode/diode?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-28 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseE7qp8r.InG@netcom.com>
Source record: 121680
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono,rec.audio.tubes

Acquired a bunch of radio tubes, and noticed that I have a 6BJ6 from Sylvania that looks like a 12AV6 triode/diode, and other 6BJ6's from GE that are like 12BA6's (pentodes). How did this happen that the same designation of tube turns out to be different for different makers? Sounds like someone screwed up at wherever they assigned the "names" of tubes (I presume the EIA or other clearinghouse assigned the tube designations). Or maybe Sylvania mislabeled a 'AV6 tube?

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.antiques.radio+phono

This is a super item - - -

US Navy Bureau of Ships Radio Receiver Analyzing Equipment Model OE-3

Built by Weston Electric, Newark NJ, probably pre WW-II.

It is housed in a nice oak box, 18 1/2" x 9" x 5"
and consists of the following:

Selective Analyzer Type 3 (which appears to be a Volt-Ohm-meter)

Capacitor Meter 664

seven tube socket adapters for various tube bases that allow measurements
to be made from the top of the chassis with the tubes in place. Simply
remove the tube, plug in the test adapter and plug in the tube.

test leads and line cord for the Capacitor Meter

Instruction cards for the Selective Analyzer and Capacitor Meter.

This test set is a beautiful piece of vintage Navy test equipment that
is stull useful today when working on receivers such as RAK, RAL, etc
that use octal and earlier tubes. It does not contain any test adapters
for 7 and 9 pin miniature tubes which had not been developed when this
set was used. The case and handle are in excellent condition as are the
pieces inside. The wires on the test leads could use replacement but
that's alll the restorative work that would be required.

This item has been in my collection for several years but I have come
to the conclusion that I won't use it as I have none of the equipment
it was designed to analyze. Therefore I have decided to sell it.

Since I expect a large response I will accept bids over $100.00 until
11:59PM Monday March 31st 1997. UPS or other carrier shipping will be
extra for the actual costs.

73,

Michael Crestohl, W1RC

Walt,
I believe they were mostly connectors made by Amphenol. They usually
had 1, 2 or 3, pins, or just 1 central, solder point. I may have a
couple, if you describe the one you need.

My references all say that it's a pentode. Perhaps you have a 6BJ8 with
the corner of the 8 chipped off?

I have a very clean Drake TR-7 station consisting of the following:
TR-7
DR-7
MS-7
300 Hz filter
500 Hz filter
1.5Khz filter
NB (I think)
PS-75
I have owned all of this equipment for some time. The majority of time this radio has been on 40 and 30 meters cw. Never had any problems.

I am looking for a Alinco DX-70 or similar radio.

For Sale: Dow-Key p/n 71-260402 antenna switch. This is a 6 position, SO239 arrangement with independent coils for each position (117 VAC), enabling phasing arrangements, if desired. Housed in a stainless steel enclosure, has some discoloration.

Gold contacts, heavy duty, no doubt cost several $100 new.

$100 shipped.

Alan, N3BJ

2504. KLEE-TV Houston TX & The Beeb

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-28 00:00:00 UTC
From: "G.T. TYSON IV" <Tarkus@skantech.com>
Message-ID: <333C10EE.561B@skantech.com>
Source record: 121689

Okay, many of you have probably heard this before, but here goes: In the early 1960s, there was an incident in England regarding interference to a BBC signal. The local BBC signal faded out and was replaced by a test pattern from KLEE-TV in Houston TX. This test pattern stayed on long enough for several viewers to photograph it off the screen a la kinescope in those pre-VCR days. But when someone in England attempted to contact KLEE-TV to inform them of this, they learned the station had been off the air for three years.

(cue "Twilight Zone" theme music here)

Can anybody verify this? I once read it in one of those Reader's Digest "Strange But True" stories where it was presented as fact. Wish I could find that particular issue right now. If it is true, is there a website or other source somewhere with more information about it? Any information would be greatly appreciated.

Hi,
I'm restoring a Hammarlund HQ-170 and have a problem with the audio output stage. With a speaker attached I get an oscillation at low volume settings. With the gain set at minimum I get a constant tone, somewhere around 8-10 kHz. As I turn the volume control up the oscillation stops. Has anyone seen this before, and can you tell me what might cause it?

Jerry-
Very interesting historical notes. Thank you.
They were available in the late 40's brand new in droves for a
pittance ...about $5 I think. Some folks made an effort to convert
for the then _no-license_ public service band (little known).
I don't recall any that were successful. The big problem was that
the I.F. was broad as a barn, like many radar/pulse receivers of the

times. The AM modulated oscillator did work OK.
Sorry, I never saw one with "igniting" flares, though. :-)

Hi Brian,

Since this list comes from _tempe.gov_ does it mean that the
"free" is subsidized by the government? Just curious. ;-)

The whole damn internet is subsidised by the government. I work
at a government facility if I sign up with a local provider I go
through the same machines and T3 lines I would go through from
work. I use a national provider because I travel so much. I don't
post from work for exactly the reason cited above.

If you got the tube at a surplus place, its possible it ended up
there because it was mislabeled at the factory.

Or there were some shady tube-remarketing places that took good old
tubes, washed and relabed them (not always correctly).

If you look in late '50s radio magazines you'll see full page ads
that sell tubes for 30 cents each. These were probably old washed
and relabeled tubes.

Nothing terribly wrong with this practice as long as they told
you these were used tubes (not always totally clear from the ads).

Just like the current practice of selling "factory refurbished"
laptop computers.

Sounds extremely unlikely. The several british TV standards are quite
different
in every respect of frequency, V and H scan rates, and sound. "Signals
from
the past" sound very romantic, but a lot of the chills rub off once
you think about all the signal conversion, storage, and amplification
that would have to magically "happen". It's not just a case of the signal
going out into space and magically bouncing back. You'd need more
of a digital converter box. (I know, the aliens out there have nothing
better to do than convert and rebroadcast test patterns).

More likely some wiseguy at the BBC put up a fake test pattern. It
happens,
especially on the late shift on Sundays. You don't get the most sober
and responsible people to work that shift!

Hello!

As title says, I'm looking for a GenRad 1650A or B Impedance Bridge.
Please, e-mail directly with asking price and condition. Tell me also if
there is a manual included.

Thanks!

Best regards.

2531. "Standard Brand" radio tubes??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-29 00:00:00 UTC
From: commquart@aol.com
Message-ID: <19970329183600.NAA22537@ladder01.news.aol.com>
Source record: 121625

Hello all!

I recently bought several lots of new/used radio tubes, for various sources.

Included were several boxes with the brand name "Standard Brand" on the box, and the tube number either hand-stamped or written on the box ends. These tubes are a mix of Philco, RCA, etc. -- common brands. Some of the tubes are new looking, but others have tell-tale signs being used -- dust, dirt, etc.

Is "Standard Brands" tubes one of the companies George Gonzalez spoke of that tested, "cleaned", and reboxed tubes for resale during the 1950s for bargain prices?

Just Curious...

Message-ID: <5hjv5k$9jp$1@news1.exit109.com>
Source record: 121628

I have an older Simpson digital multimeter (model 460) that does not work - the LEDs for the numerals do not light up (though the LEDs for the decimal points do light). Simpson does not repair older units. Any suggestions as to where I could send this for repair? Please reply by E-mail.

>> diameter or close to that.
>>

Why not make your own with 35mm photo film containers and 8 pin octal valve bases (from non-working valves)? Simply drill a hole through the bottom of the film container and remove the spigot from the valve base. Removing the spigot should reveal a hole through which you can pass a metla scre to hold the base to the film container. You'll need about 20-25 turns of thin plastic covered insualted wire for an 80m pi network, and about half that for 40 metres.

Joe, You don't subscribe to usenet news groups, you just
select them with your news reader. Mailing lists are
what you subscribe to. To subscribe to the boatanchors
mailing list send a message to:
listproc@theporch.com with no subject and in the body put
subscribe boatanchors yourname@whatever.com

You send postings to boatanchors@theporch.com

I should mention that boatanchors mailing list is no longer
free. It costs $12.00 soon to be $20.00 per year.
It's well worth it. Best 12 bucks I ever invested.

So sign up and have a ball.

As a kid I worked in a radio shop owned by a guy who was a maintenance tech on those (and other) Army Air Force equipment during WWII. He said that, as used in combat areas, the units had a an "emergency handle" on the front that activated an explosive charge that blew the unit out the side of the aircraft -- right through the wall.

Production units were wired with all red wire to make reconstruction of the units for intellegence purposes more difficult. A small, removable code disk rotated on a microswitch to generate the coded response to a query pulse from the radar unit. The code disk was supposed to be changed daily.

SNIP

The surplus houses had them into the mid to late 50's. With the fungus proof varnish applied to all the wiring removing any of the components for re-use was a major project.

2557. Collins 70E-1 PTO

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-30 00:00:00 UTC
From: James McLaughlin <jmclaugh@jps.net>
Message-ID: <01bc3d37$4fe16b40$c53dd9cd@jmclaugh.jps.net>
Source record: 121558

Hello to everyone on the newsgroup,

I recently got a Collins 70E-1 PTO homebrewed into a VFO with output in the 80 meter band. There is an oscillator at 2.5 MHz in there, and several mixer tubes. Can anyone tell me the power requirements for te 70E-1? I would like to find out so I can use this great piece of homebrewing in my present shack.

Any other info for the 70E-1 that you might know would also be appreciated.

Thanks,
Adam

TWO (2) 2-METER 10-MEMORY SYNTHESIZED HANDHELDS FOR SALE

KENWOOD TR-2600 w/lots of accessories for *Very* extended handheld use.

Ideal for camping, or long-term use when no power is available.

Package includes the following:

2 Kenwood TR-2600 2-m Handhelds
10 memories, scan, odd splits
Touch-tone keypad, direct frequency entry

2 Custom deluxe leather carrying cases w/metal belt clips

6 PB-26 nicad battery packs, varying ages

2 EB-3 6-C cell alkaline battery packs (equivalent to 5000 MAh each)

1 6-AA cell alkaline battery pack (looks like PB-26)

1 SMC-30 Speaker Mike

1 Quick-Charge Base Stand ST-2

2 Standard Kenwood wall chargers for PB-26

2 Rubber duck antennas

1 Original factory manual

The first $325 will take the entire package, and I'll pay for shipping.

Please note that the two handhelds are in perfect operating condition
except that one handheld transmits in simplex only.

In addition, the matching Kenwood Vox Headset HMC-1 is also available.

Feel free to contact me at bashin@calweb.com, or telephone at
916-441-4096.

Thanks,

Bryan Bashin

CES Smart Patch 510SA SIMPLEX AUTOPATCH FOR SALE

This autopatch will enable anyone to convert a radio transciever into a personal telephone autopatch. The Smart Patch connects to your radio's audio, microphone and squelch circuits and listens for you to turn it on remotely via broadcast DTMF (Touch-Tone) tones.

The Smart Patch runs off 12 VDC and is only about 9" x 9" x 1" high. It features powerful programmable options for setting the following:

-- sample window
-- sample rate
-- toll call restrict
-- enabling a personalized ID
-- pulse/tone dialing
-- activity timer
-- timeout length
-- personal access code settings

The simplex autopatch will also operate in
reverse autopatch mode, sending an alarm tone over the air to alert you that someone is calling your telephone line.

Front panel LED displays show connect status, RX, TX and squelch conditions. Also, four front-panel switches allow direct connect, disconntect, power on/off, and toll-restrict enable/disable.

Also included is the original instruction manual.

This unit has served me flawlessly and is in good working condition. Like other CES products, it is beautifully and solidly built. It originally sold in the AES Catalog for $450.00.

Asking $175.

Will also consider trading for ??.

Please contact me either by e-mail at bashin@calweb.com, or telephone after 8 am Pacific Time to: (916) 441-4096.

Thank you!

2567. WTB: SX110 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-30 00:00:00 UTC
From: Larry Tucker <sts@ac.net>
Message-ID: <333F21F6.3C2B@ac.net>
Source record: 121568

Hello,

As a teenager in the 60's I fell for the SX110 Hallicrafters receiver and drooled each time I saw one. With those big dual tuning knobs and half the front freq dial I just knew then I could hear it all with one of these radios! Back then $169.95 was astronomical(still a goodly sum) Now, some 30 years later, I am on a quest to find this receiver. The 110 may not have been the best of the time compared to Hammarlund and others but it's the one I said I'll have some day.

I'd like to find a 110 that is restorable, working or not. As long as the cabinet is nice with all knobs etc I'm interested. I figure I can take care of the electronics. Of course a manual to go with it would be nice too. I think a non-working set would be more fun to fix up and restore.

If you have one that is operable or not I'd appreciate your contacting me if you wish to part with it. I think a non-working set would be more fun to fix up and restore.

Thanks much,

Larry, N4KVP

I have a clean Siltronix 10/11C driving a clean Heath SB200 amp.
This is a basic 500watt output 10m SSB station. The Siltronix
has the look and feel of Swan gear including the smooth dual speed
main tuning knob. It is tube based gear but fairly late model.
For what it's worth, the Siltronix has 11m receive capability.

Will sell for $500 or swap.

Interests include early US manufactured solid state gear ICIR, CIR,
Cubic, Swan, Alda, Astro, Hammarlund, National, Drake, etc. and
in tube gear, Geloso (American Geloso). Looking for a Johnson Navigator.

This is a good deal. Some of the best equipment I've
ever heard was made by Swan. This is MIL-SPEC stuff.
Loud AND clean; that's what the military demanded; and
that's what Swan provided. Anybody that lives near this
guy should check it out. The SB-200 is a known quantity
as well. For $500, this is an admirable set-up. Using
this equipment, you WILL get out; no doubt about it. If
you can afford it... Go get it baby.

Grant, Grant, Grant,

You, whose opinions I have grown to respect so highly--are you now falling prey to that unique American marketing phenomenon--"charge a lot and your customers will become evangelists"? I can't tell you how many times I've seen this almost subconcious reaction to paying more money for something--it's a knee-jerk response that results in the ongoing self-justification and attempt to convince others of the wisdom of your actions.

Think of the number of Boatanchor enthusiasts outside of the small coterie of 700 that cannot offer their experiences to readers of Jack's For-Pay list. Might there not be many more than 700? Think of the often deep ruts that the party of 700 fall into--interesting to a few, I suspect, but perhaps not to the many.

I value the archived digests of the For-Pay list up on sunsite and am truly glad they are made available, but I hardly view an attempt to provide a (traditionally normal) free equivalent as an attempt to undermine it. I am not alone in my distaste for the tone of the operator of the For-Pay list, and feel that more bandwidth is wasted scolding the elder ops that are probably not as computer literate as we younger types. And I would like to know why it is the only list I'm aware of that DOES cost money, and in fact has posted a 75% increase in only its second year of For-Pay operation. What will it cost next year? $30?

To me, it's hardly the money--it's the attitude. But worse than the attitude of its "owner-operator" are the attitudes of its members when presented with an alternative--what's the name of the psychological state of mind where kidnapped people start to identify with and even like their captors--aside from the Patty Hearst effect--is it the Stockholm Syndrome? Reminds me of that. Yikes, can't we all just get along?

Change--the only thing that is constant.

Your BA friend,

Roger WA3FLE
Norristown, PA

Message-ID: <333EA103.5F73@Bledsoe.net>
Source record: 121576

I have a Swan 500C with the original power supply and original operation and maintenance manual. If interested, I also have a new wire antenna with balun from AES. As far as smoker or non-smoker, I do not smoke, but do not know about previous owner(s). Condition is fair to above, with excellent electrical. The only thing that seems to be modified is the power supply cover, although I am not familiar enough with the 500C to be a good judge.
I am looking to trade it for a repeater, or components, test equipment, such as signal generator, frequency counter, etc. All reasonable offers will be considered.

As far as I know, "Standard Brands" was only a name on a
widely-available box. I believe you will observe nothing
on the box in either the red or black ink to indicate a
company name or address. A LOT of those boxes were around,
however.

This is not an ad, just a notice that people like me who are interested in telecom history should be aware of. I just got the new Lindsay's catalog, and it has a reprint of "American Telegraphy and Encyclopedia of the Telegraph" circa 1912. 700+ pages; and indeed just the catalog description is fascinating. Lindsay reprints all kinds of neat old stuff, like "The Boy Electrician". I have no connection with the company except as delighted customer.

I still have a few tubes I bought from one of the used-tube sellers ("Cornell -- TUBES 33 CENTS!") when I was a kid. They are in the red and black "Standard Brand" boxes, so at least one of the used-tube outfits used them. Cornell sold the boxes too.

Their flyer also had an ad for a TV-repair how-to book, featuring an illustration of a natty, uniformed technician talking with the customer in her living room. The customer looked like Lauren Bacall. Made me want to be a TV man... :-)

Hello everyone!!

Please take the time to have a look at my new Web Site. It's only a first attempt so don't be too critical. At present it only has a few bits active but each week I intend to extend it so BOOKMARK it and call back each week.

It will hold a list of links I have found of interest both amateur and commercial, plus the EDDYSTONE USER GROUP. In addition there will be items for sale including BoatAnchors, previously enjoyed classic books on radio, old magazines and much more.

The address is http://www.plasma.co.uk/simon/ so do have a look and I hope you find it useful. Any constructive comments would be most welcome.

Regards

Simon

2585. Info request: Navy RAO-7

Anyone remember the Navyships RAO-7 receiver? General coverage HF receiver. Basically built like a brick sh**house. I used to show off by hitting the side of mine with a hammer. Nary a tweet. (Of course, it would drift around on it's own...)

I think it was based on a National NCX-100, but I'm not sure.

Any ideas?
Clean pictures?
Gear for sale?

If you have a nonrepairable small receiver you'd like to unload, please let me know. I'm looking for something that still has housing, RF coils, tuning cap, and bandswitch prettty much intact so I can strip most of the thing and resurrect it as a different receiver. Will pay a few bucks for the carcass plus shipping. Pls email if you have one.

I have a few mil surplus modulator units from APS-104 search radar (from B-52 bomber). These were used to fire a large pulse magnetron (in another unit). Contains a thyratron, several HV rect tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual. Unused, still in original box, $80 plus shipping (110 lbs.) from southeast Alabama. (or pick up). 36330 zip. Email or call 334-347-5281.

I would be very careful where I dumped that oil. If the oil IS
contaminated with PCB's or any of the Halogens and is inadvertently (sp?)
mixed with _waste oil_ (a legal name) that is being sent for recycling the
entire lot of waste oil will become hazardous waste. If you suspect you
hace PCB contmainated oil you must take it to a licensed disposal firm.
Many such firms are listed in the yellow pages. Such firms will burn the
PCB contaminated oil under conditions of temperature and time to ensure
the safe destruction of this material. As has been written previously
these chemicals do not break down naturally and only concentrate in the
food chain much as DDT does. I used to use DDT on my potatoes and thought
it was great. I screamed a bit when it was banned but I can assure you
that I wouldn't use it now. PCB oils are in the same boat. They did a
great job but aren't worth the risk to our future.

From: jkh@meaddata.com
Message-ID: <5hog5o$188@mailgate.lexis-nexis.com>
Source record: 121581

Folks,
For those of you who have an R-390A without meters read on. I have several pairs of meters which will fill in those ugly holes and may even be made to work properly. These meters are Weston Model 1011's. They fit a 1 1/2" hole and have a square face 1 3/4" x 1 3/4". They are flat black and in very good condition. The dial faces are black with white lettering and have a "D" shaped glass window. The indicator needle is kind of wide and "spear" or "bayonet" shaped and painted white. They do *not* have radium dials. The dial is labeled "OUTPUT" and the curved scale is numbered 0 to 100 by 20's and has tick marks every 10. The connectors on the back have aircraft type nuts and solder lugs. They are used meters. There is a stickon paper tag on many of the meters with the number 765365 stenciled on it. The square face of the meter is approximatly 5/16" thick, that is, proud 5/16" from the front panel when installed. They don't come with mounting screws.

I don't know if they all work or not, but the meter movements are all free. If they are good meters, which I suspect they are, they might be made to actually work on the receiver, otherwise they sure as heck made my R390-A look better!

I will sell a pair of these meters for $20 plus postage. Please respond via private email to my address in the sig below. Thanks.

Source record: 121582

This is a 2M Nuvistor preamp made by VHF-UHF Associates of Fairfield, CT, model G-144. Uses a single 6CW4 Nuvistor tube with a metal box 3.5" x 1.75" x 1.75. User-supplied power required of 6.3v and 110 or so DC. Has SO-239 type connectors for input and output.

A good deal of the original gray paint isn't there anymore, but otherwise it appears in good shape, although I haven't ever used or tested it.

Be the first on your block to own this handy item (or in your state, probably!) for $20 which includes an extra, spare, and similarly untested Nuvistor.

Add shipping if needed from Nashua, NH 03060

You might want to try one in a real R-390A if you havent. As I recall, the circuit requires a very low-resistance meter coil, as its part of a very low resistance cathode bridge circuit.

You can put in a higher-resitance meter, but to get the meter to act properly you have to change a resistor in the IF module. This is not too keen as then that main chassis will only work well with that particular IF module.

A nice bit of semantic muddling. Notice they DONT say "These are
""Standard(R)"" brand tubes, just that they are "standard brands", which
is probably a true but trivial statement.

Just like the CD of hits from the 60's by "The Original Artists".
But "The Original Artists" is the name of a group of
not very talented musicians, not the Original Artists that originally
recorded the songs.

Then there's the scam where it is the
original artist, but recorded recently, when their voice
and enthusiasm has waned. I guess you could make up
tube boxes saying "Original Tubes", meaning used o'course.

2594. FS: Nems-Clarke, HP Receivers- Last Chance

2596. FS: 1930's Test Equipment

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-03-31 00:00:00 UTC
From: doragsda@oboe.calpoly.edu
Message-ID: <5homlf$alt@isnews.csc.calpoly.edu>
Source record: 121588
Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.radio.amateur.boatanchors

Have the following test equipment from the 30's or early 40's:

RCA Model 151 "Cathode Ray Oscillograph" - 1 inch o'scope. Uses the following tubes: 80, 6C6 (x2), 885, 913 CRT. Condition good to very good -
line cord has been replaced, needs a good exterior cleaning, all knobs original and nice, handle intact, chassis clean. Not tested electrically.

Weston Capacity Meter model 664 (capacitor tester) with power cord and leads. Pictured on page 136 of the 1935 edition of Ghirardi's "Modern Radio
Servicing". Condition very good - excellent.

Weston Selective Analyzer Model 665 Type 3. VOM. Pictured on page 324 of
the above book. No leads. Condition V.G

(Both of the above Weston meters have a tag on them referring to their being
part of Navy OE-12 radio equipment and their serial numbers match.)

Simpson 220 Roto Ranger Tube Tester / voltmeter / ohmmeter. Electronics and
front panel are very nice. Meter dial changes mechanically as you rotate
setting knob. Meter glass is cracked but it's just a simple square piece
and easy to replace. The cloth covered case for this is in poor shape. Plywood is falling apart. You could glue it all back together, I
think, if you're real ambitious, but it would probably be better to just
make a new wooden case. This tester came with a globe shaped 01A inside it
(tube was a dud, it doesn't have a tube in it now)- I have no paperwork on
setting this up, so I don't know if it works. I stuck a '30 tube in it and
the pilot light came on and nothing smoked!

I'd like to try to sell all of the above as one lot for $150.00 or offer plus
shipping from zip 93401. I don't want to break it up at this time.

David Ragsdale
doragsda@oboe.calpoly.edu

Where can I get tubes & parts ?
What kind of Boatanchor should I get ?
Where can I get a Boatanchor ?
Epilog

Credit - Rick Stealey K2XT got rec.radio.amateur.boatanchors created
as an official newsgroup. The original boatanchors e-mail list was
created by Jim Lockwood KM6NK, and is currently managed by
Jack Hill W4KH -- its high signal-to-noise ratio should be
an inspiration.

Much of this FAQ was put together by John Brewer WB5OAU/4 for
the original boatanchors e-mail list. Other info has been gathered from
various sources by Michael Crestohl W1RC and Nick England KD4CPL.
A big Thank You to all who have contributed !

Disclaimer - While we believe this info is reasonably correct, all
responsibility for use of this info is yours, not ours.
BE CAREFUL - Boatanchors are heavy and contain lethal voltages !!

Why Boatanchors ?

Some may question the desire for 80 pound receivers and
100 pound transmitters, both with filaments sitting there
getting hot and wasting power in this day of microprocessor
based, mega-memoried miniaturized transceivers! Although
modern radios are extremely good at what they are designed
to do, they are about as interesting to operate as a
toaster oven. They have no soul.

Additionally, many find a zen-like feeling in taking an
old, misused ratty old radio and carefully restoring it
back to health. Like cars of the era, boatanchor radios
were made to be worked on, modified, and tinkered with.
Many think of it as Real Radio in this era where fixing
a transceiver is accomplished by boxing it up to send to
the manufacturer for a custom VLSI chip replacement.
Indeed, a warm soldering iron is almost a requirement
for operating a vintage station.

Others claim that boatanchors SOUND better than their
silicon descendents, and this is generally true. The
audio from a Hammarlund or National receiver, or a
Johnson transmitter can sound much better than the
300mW audio coming out of the 2" speaker in the
typical transceiver.

Watching the flicker of 807 modulators in a Viking I
as you speak into a D104 mic, is certainly more stirring
on a winter night than considering hole and electron
flow.

If truth be known, much, if not all of the above, although
true, are merely justification for the insatiable hunt
for more and more of these old boxes, simply because they
are just too NEAT to have and operate!

What are Boatanchors?

Big. Heavy. Old. Fun.
"Boatanchor" is a fond term for vintage tube-type ham radio and
communications gear. Manufacturers like Hallicrafters,
Hammarlund, National, Johnson, RME, Heath, Collins, etc.
made this gear roughly through the mid 1960's. Also included is
tube-type military radio gear, homebrew gear, station accessories
like microphones and keys, and test equipment of that period.

What is this newsgroup for?

The polite discussion of boatanchor related topics:
Restoration, Repair, Operation, Collecting, Historical info,
Parts sources, Legends and Lore, Vintage operations,

Vintage station accessories (keys, mikes, etc.)
Boatanchor ONLY buy/sell/swap

Who is welcome here ?

ANYONE interested in Boatanchors.
Hams, Non-hams, SWLs, military surplus fans, etc.
Newcomers, old-timers, thrill-seekers.
Men, Women, Boys, and Girls of all ages.
Commercial posters sticking to boatanchor topics

What is this newsgroup NOT for?

Newer equipment (use rec.radio.amateur.equipment)
Vintage broadcast and phono gear (use rec.antiques.radio+phono)
Vintage audio gear (use rec.audio.tubes)
Vintage solid-state gear (try the VSS list -
Send e-mail to listserv@fablotz.min.net.
Put "subscribe vss" in the message body)
Homebrewing with modern technology (use rec.radio.homebrew)
Non-boatanchor buy/sell/swap posts (use rec.radio.swap)
Antennas (use rec.radio.amateur.antennas)
General ham info (use rec.radio.amateur.misc)
Code vs No-Code (use rec.radio.amateur.policy)
Flames (use alt.flame)

Where can I find out more about Boatanchors?

Book Summary - courtesy of Michael Crestohl, W1RC w1rc@amsat.org
---
1. RCA Receiving Tube Manuals. I have several editions in my library
because older tubes were deleted and newer ones added between editions.
I won't list all the tube manuals in my library but they are spaced out
over three-four year intervals. The latest one I have is RC-25 which
is dated 1966 and has 607 pages. Availability: Hamfests & shows $5.00
to $15.00

2. RCA Transmitting Tube Manual - 1962, 320 pages includes the lineup
of transmitting tubes including the venerable 807, 6146, 811A, etc.
Availability: scarcer than the Receiving Tube manuals but I've seen
them around - $5 - 15.00

I believe both these manuals have been reprinted and are sold by AES in
Tempe AZ.

While on the subject of tubes....

3. Tube Lore, Ludwell Sibley 1996 ISBN: 0-9654683-0-5 $19.95 available
from author (Flemington NJ 08822). 186 pages. Excellent reference
source on the subject written for collectors and vintage radio buffs.
Features cross-reference on tube types and general essays on tubes.

4. Elements of Radio, (William) Marcus & (Abraham) Marcus. 3rd Ed. 1953
771 pages. Prentice-Hall Library of Congress Catalog No. 53-8544
A classic text that focuses on radio receiving theory. Very well
written and presented. Good first text on BA technology.
Availability: Should be easy to find at any vintage/antique radio
show - $5 - $20.00

5. Radio Servicing - Theory and Practise, (Abraham) Marcus, 1954, 794
pages, Prentice-Hall. Library of Congress catalog number 53-9729.
A good second text that follows on Elements of Radio. Quite thorough
in its coverage. Availability: same as Elements of Radio.

6. Elements of Radio Servicing 2nd Ed. (William) Marcus and Levy, 1964,
566 pages. McGraw-Hill Library of Congress catalog number 54-9698.
Its very interesting that the "other" Marcus collaborated with another
author to write a similar book. As with Radio Servicing - Theory and
Practise it is focused on radio receivers with emphasis on broadcast
radio repair and troubleshooting. Availability: same as Elements of
Radio.

Here are four US Army TMs that I think are really good for learning about
Boatanchor technology: I found these to be of particular help when learning
about this stuff back in the 1960s.

TM11-4000 - Troubleshooting and Repair of Radio Equipment. April 1958,
177 pages. R-390 enthusiasts will especially want to get this book if
they can as it uses that receiver as the "sample", although not actually
identified as such. As it was written for soldiers it is clearly presented
and covers receivers and transmitters. One of my favorite texts.

TM11-662 - Basic Theory and Application of Electron Tubes. February 1952.
215 pages.

TM11-664 - Theory and Use of Electronic Test Equipment. February 1952.
158 pages. Covers meters, tube testers, signal generators, etc. One
of the neat things I like about this book is it details the venerable
mil surplus test gear like the URM-25D, TV-7(*) and other equipment
of the era. Very important book for any BA fan.

TM11-665 - CW and AM Transmitters and Receivers, Spetember 1952, 274 pages.
Another essential book to have. Title is self-explanatory. Another
personal favorite.

On availability: These may be found for a few dollars at flea markets
and vintage shows if you're very lucky. They are otherwise hard to find.
I don't know if they are available through NTIS. I've seen them go for
$15.00 to $20.00 a copy. They're well worth it.

There are other military TMs that teach DC, AC theory, antenna/propagation,
power supplies, etc in this series but I have omitted them because they
are really generic and not Boatanchor-specific. However, if the editor
feels they should be included I will be glad to provide a description of
them. The Navy also has an excellent set of manuals that accomplish the same
purpose and are quite excellent as are all Navy technical manuals.

Finally, there's Fundamentals of Single Sideband published in 1959 by
Collins Radio Company. This book is quite technical and detailed on
the subject written by the engineers who designed and developed SSB.
There is not a picture of any of their amateur line in the book although
the theory certainly applies to any filter-generated SSB transmitter.
Its about 200 pages with lots of charts and diagrams. Availability is
very scarce and I've seen them priced from $50.00 and up. I believe there
was a reprint in the 1970s and these may be found at a much lower price.
The original is a large paperbound book with bright yellow covers.

The titles above only represent a portion of my radio library and I have
selected them as my favorite books of interest to Boatanchor enthusiasts.
I have several other titles from the 1940s and earlier but did not list these
as I do not feel they meet the criteria for this purpose, ie: the
technology is pre-BA and falls more into the realm of antique equioment.

Copyrighted 1997 by Michael Crestohl. Permission to reprint granted
provided credit is given.

Where do I find Boatanchors on the air ?

HF AM hangouts - 1885, 1995, 3885, 7295 KHz (East Coast of US)
1925, 3870, 7295 KHz (West Coast of US)
14.286, 21.40-21.45, 29.0-29.2 MHz

HF CW hangouts - lots of places, particulary 3579.545 KHz

VHF AM info
http://rob.acol.com/wwwboard/radio/ham/vhf-am/

6m AM - 50.4 MHz

2m AM - it varies, 144.4 MHz is common

How can I practice Safe Boatanchoring ?

This is a genuine concern! Boatanchors have Real Voltage
present in them! Lethal voltages. You will find that
capacitors really DO store charge! None of this wimpy
12 volt stuff!

Get back in the habit of discharging any capacitors that
are lurking under the hood. Keep one hand in your pocket
when working on a hot radio. Be REAL careful and THINK THINK
THINK before twiddling with a boatanchor that must be
powered up and worked on.

It is SO easy to get used to working on solid state equipment
and not worrying about Real Voltages... don't do this!

Also, many older radios are not fused... receivers are good
examples of these. I generally replace the line cord
(they usually need it anyway) and either put an in-line
fuseholder, or some of the Heath-type fused plugs in the
radio. Better still, replace the 2-wire plugs with a more
modern 3 wire plug. Barring that, ensure that you strap
every cabinet with healthy sized cable, to a common
station ground. This will prevent _you_ from becoming the
cable between two pieces of gear at different cabinet potentials.

Fires are nice to have burning on winter evenings
but not when they are on top of your operating desk.

Speaking of operating desks, you will become good at carpentry
if you spend much time as a boatanchor operator. You will
quickly discover that the table you used to operate your
tranceiver is way too small, and waaayyyy too wimpy to support
a growing boatanchor station!

How do I restore a Boatanchor ?

This subject could easily fill many pages.
There is a lot of really good info from Hank Van Cleef in the
rec.antique.radio+phono FAQ:

http://www.cis.ohio-state.edu/hypertext/
faq/usenet/antiques/radio+phono/faq/top.html
ftp://rtfm.mit.edu/pub/usenet/
rec.antiques.radio+phono/

Below are just some common topics.
The newsgroup is a good place to ask about other issues.
Remember the radio that stares at you from
your bench is old. There are not many around. Take that into
consideration as you proceed through the process. If you
erase the dial marking on your receiver by cleaning it
with Windex, you likely will not find another at Radio Shack.
Take your time and enjoy. The journey to a working boatanchor,
like life, is the _point_ not a process. You will say less
nasty words if you take your time.

Some general restoration tips:

* Check fuses before powerup. Many 'anchors will have the
wrong value fuse in it. Checking the fuse before purchase
is a good thing to do too. If it's open, you at least know
what you are getting into.

* Check the resistance from power line to chassis before
powerup. Most boatanchors have bypass capacitors from the AC lines to
chassis and these sometime have deteriorated. Replace with caps made
for AC line bypass applications (available from Digi-Key, etc.)

* Power up old radios gently. Plugging it into the wall and
turning it on is not gentle! Bringing it up slowly to operating
voltage with a Variac so that electrolytics can "form"
is gentle.

* Don't trust that the tubes that are in the sockets are the
correct tubes. Check them against the schematic. If you
don't have a manual (and even if you do) note which socket
the tube came from so that you can replace them correctly.

* Don't clean tubes with water. The marking on the glass
will likely come off with one good swipe of a water dampened
cloth.

* Assume many electrolytic and paper caps are bad. Check them.
Paper caps should read "infinite" ohms on your ohmmeter.
Electrolytics should read a very high value after settling.
Paralleling a known good electrolytic is often a good way to
check an electrolytic.

* Check high resistance, and high wattage resistors for
correct value.

* Nifty tools to have are flux brushes, for cleaning nooks
and crannys. Windex is nice for cleaning chassis.
Qtips are good to have too.

* NEVER clean dial markers or drums. If you do, assume that
they will wipe away never to be seen again. You WILL say
bad words if this happens!

* WD40 or Scotts Liquid Gold (my favorite) applied to a clean
wrinkle finish will do a great job of restoring the lustre.
Works well for knobs too!

* Never use WD40 or Scotts Liquid Gold on anything until you
have tried it on a non-visible part of the cabinet to make
sure it won't dissolve anything.

* It is a poor job that doesn't require at least one new tool !
From Ed Zeanski-
- adjustable knurl wrench for removing knurled toggle switch
nuts -
Techni-Tool Phone 215-825-4990
5 Apollo Rd, Box368 sales 941-2400
Plymouth Meeting, PA fax 828-5623
19462

These folks listed 2 adjustable knurl wrenches, 1/2" and 5/8",
for $13.20 ea. My catalog is a year old so the price might

have changed. The collet in each allows 1/16 adj to allow for
finish thickness. Brand is listed as "Knurl-Tite",
stock# 388WR014 for the 1/2" and #388WR016 for the 5/8".

Aren't tubes and parts impossible to find ?

Nope - there are lots of tube dealers attending hamfests and
antique radio swap meets, and selling via mail order. Besides,
there are lots of 50 year old tubes out there working just
fine.

Fortunately, hams are notorious packrats and parts suprisingly
abound, for old gear, particularly at hamfests (and in the
boxes under the table as mentioned earlier). Word of mouth
once again will work wonders at getting tubes, high voltage
caps, and the like shoved in your direction. Beware that this
is an addiction, and boatanchor radios, parts, and periodicals
will soon overrun all available space. Trust me.

Where can I get tubes and other parts?

What type of Boatanchor should I get?

This is a question that has as many answers as there are individuals. Generally, as a "starter" boatanchor, 50's vintage gear is probably the best way to go. Radios in this era are quite desirable, but often times won't require extensive surgery to get repaired and on the air.
A radio from a well-known manufacturer is also a good choice... for receivers, look for Collins, Hammarlund, Hallicrafters, and National are all good radios. In the transmitter space, Collins, E.F. Johnson, and Heathkit (with certain reservations) will do well.

Transmitters with plate modulated AM are the more desirable units. Prices will generally reflect this.

Good "starter" transmitters include, but are not limited to:

Johnson: Ranger I or II/Viking I or II/ Valiant/500
Collins: Any 32V series.

Heath: Apache, DX100A or B
(my AM bias is showing!)

"starter" receivers include:

National 183/183D, HRO60 and MANY others
Hallicrafters: Many SX series.
Hammarlund: HQ129, HQ150/160/170/180, Super Pro series, many
others.
Collins: any 75A series.

By "starter" radio, I do not mean to indicate the cheapest! Most
of these radios would also be on the "best" list. I selected
these as they _are_ some of the best, and when one is starting
anything, it is good to get the BEST stuff available, rather
than getting junk and getting discouraged with it. There will
be enough to learn (or remember!) without having to compensate
for marginal equipment (was that 'Peak the plate and dip the
grid, or the other way around??')! Any radio from this list
will do the job for some time, and make operating a pleasure.

Where can I find Boatanchors for sale?

The best way to find a boatanchor is to let other hams in
your area know you are interested in them. Often times
I have been given a boatanchor, because the former owner
has relegated it to the garage or basement. This is also
the cheapest method. When attending a hamfest, ask some
of the sellers if they have any for sale. Often times
sellers won't bring such stuff, as it is HEAVY and is
perceived as not being sellable. Look under the tables,
and in the back of the sellers displays for them! While
you are under the tables rummage thru the boxes of parts
found under there for parts that will come in handy restoring
your new-old treasure. Tubes, high voltage caps, vintage
microphones and connectors may be found lurking here!

If you are in a hurry (and have money) ads in Electric
Radio magazine, the Ham Trader Yellow Sheets,
or your local packet BBS are good places to look. Expect to
pay more through these outlets. Also expect to become an
expert in UPS shipping rules. Boatanchors are heavy, and
often the cost of shipping one can exceed the cost of the
entire unit.

EPILOG

Don't look as boatanchors as an investment. Get a really grimy
specimen and clean and fix it, and coax it back to life. Turn
it on with the rest of the room lights turned off. As it warms
up look into the insides and see the orange glow from the filaments
and the purple fire from the 866's. Watch the giant S-meter
come to life, and the dials emit that soft light, framed
by your carefully cleaned and waxed cabinet. Rotate the
knobs that are of sufficient size and layout to permit
easy, flywheel smooth adjustment.

Maybe tune to the BBC on your NC-183.... watch the S-meter
climb as the full audio comes out from the 6 watt output stage
as you crank back the RF gain. Fiddle with a few more knobs
(boatanchor operation does not need to be a passive experience)
to get it set just the way you want it.

Then you'll know why boatanchors are such pleasent
things to own. Like mine, your transceiver may become a
very expensive frequency counter and RF generator used
to align the 'Real Radios'.

Well, having worked on, supported a family with, and played with tube equipment for 34+ years I have to say that I really like the BA list, this one too, and several other radio groups on usenet. I've never had a bad exchange with "Jack" , have enjoyed many useful exchanges with the folks on BoatAnchors of both info and hardware. I just figure the guy started something and provided a service when there was no other BA stuff around , it grew, and he has to cover expenses. Geeze! How much bull did it take to even get this group off the ground? How long to even decide on the name? This post and your's I'm replying too have how much tech info? About which sets? Thats why I subscribe as well as read. S/N on BA exceeds spec!

2608. Regency DR-200 in a nice Teal - FS

Hi Gang --

Want to get the XYL or YL involved in your hobby??

Nothing like a little splash of color in the shack to brighten things up! Guarrantied to get them to ask... Hey hon, what's that GREEN one?

It's a Regency DR-200 Monitoradio VHF dual-band receiver with separate matching speaker. Nicely finished in a genuine teal (that's a sort of bluish green, guys) leatherette texture. It's fairly unusual -- at least I've never seen anything like it.

And the amazing part is how beautifully it works. Covers 30-50 MHz and 152-174 in two separate bands on a backlit sliderule dial (glows nicely in the dark). NBFM sophisticated VFO 15-tube circuit. Can also be used for fixed frequency operation with one xtal slot for each band.

It's in excellent shape cosmetically and electrically and comes with original manual AND unused warranty cards (ha!).

$75 (for both pieces) + shipping

Great DX Conditions
or
"don't look now but you S-units are showing"

Did anyone else catch the fantastic band opening last night? I could
not sleep so I was up late and was tuning around 20 meters when I heard
the clock strike midnight. Suddenly the band really came to life with
some great DX stuff. First I heard Romeo Germany 8 Uniform really bang-
ing in from somewhere in the south Atlantic with a big pile-up on the
frequency. I picked a spot and dropped in my call. "Mike India Lima go
ahead". "Germany 8 Uniform, you are 70 over 9, QSL info please." "Not to
worry India Lima, my card 63% to you via burro." "Aw-Right, got him!"
Then Charlie 0 Dog Echo gave me a call on CW running a modified
HW-8 at a KW output with a re-worked cash register as a keyboard keyer.
Maybe try a little more CW action. Called CQ on CW and answered by BIG
CARRIER, weak audio from Victor 0 India Charlie Echo. "Your audio is weak,
OM, try turning up the gain." Found out the audio section of his
transmitter was not working and he was modulating by screaming at the
final tubes.
Swung the beam further south and there was Charlie 0 Alpha X-ray in the
Feedline Islands. Gave him a call. "Kilo 5 Mike India Lima you broke
my S meter, do not transmit again I am afraid you may blow my rig."
"Roger roger Alpha X-Ray, what is QSL info please?" He didn't reply.
OK, lets see what's going on in the Pacific. Swing the beam on
around. Wow! there is Fox Ocean 0 Lima running 80 over 9! "Fox Ocean
0 Lima this is Kilo 5 Mike India Lima you are 80 over 9, what are you
running?" "Ok Mike India Lima, rig here is a converted cordless phone
running 1.63 watts using lamp cord feedline to a chicken wire fence."
Now this is great! Lets see what is going down on the European front.
Swing the ole beam on around past north. Man listen to those signals!
Better catch this one. Dropped in my call. "Mike India Lima go ahead."
"Roger roger, Germany 0 Tango Charlie Hotel Alpha, you are 62.3 db over
S9, Q5 copy. What is my report?" "Mike India Lima, you are minus S8,
can only copy on negative voice peaks, try again." "MINUS S8!!,
WHADDYAMEAN MINUSE S8? Im running 14 bazillion watts to a 42 1/2

element Thunder Stick at 163.42 feet!! Minus S8 my Aunt Fanny!" Wait a minute, what's that call again? G0TCHA? What's today? Let's see that calendar. Aw rats!

I've seen a couple mentions here recently of a "for profit" BA list.

Apparently, there's a few people with either a mistaken understanding of, or a mistaken assumption about, the BA list.

I don't even own a BA radio, but I like old test equipment, so I subscribed. I'm on several professional mail-reflectors, for cad/cam software, cnc machine tools etc., and I have to say that the BA list is the smoothest running mail reflector I've ever seen. And I love the strong moderation. That's the best part. It's always peaceful and courteous and productive on BA. Any baloney gets squelched fast.

I've done some research into website setup for work, so I know what telcom costs are like. I've also paid attention to the development of BA. The listowners there have lost over $10,000 in the past few years. That is to say, they dug into their own pockets to keep it going and going well. This is a fact.

The subscription fee, a whopping $1.50/month, isn't nearly enough to cover the costs of running an active mail-reflector with close to 1,000 serious members. Think "T1 line costs", think "$1,000+ software packages and updates", think "Unix servers" etc., etc.. It costs real money to process 50,000 mail transactions a month -smoothly and without errors-.

And those who've never managed a busy mail-reflector can't even imagine the hours of admin work involved, not to mention the incredible abuse that rude people pile upon you. It is truly shocking how childishly grown men can act. Of course, anybody who reads rec.radio.swamp experiences this on a daily basis. Remember, the BA listowners aren't getting paid dime one. They do it because they truly love BA's.

Anyway, a discussion of cost vs. no-cost might make some sense, but let's drop the 'for-profit' terminology regarding the BA list, 'cause that just doesn't make any sense at all.

Thank you, Richard! It's really tragic that some have not looked
into how well the ORIGINAL BA List works. It's free to all comers
for a mimimum of 4-weeks inspection.

What's more tragic is that the list owner at tempe.gov chose to
plagerize the name of BoatAnchors thereby impugning the BA Newsgroup as
well. We know this latter was a much careful and laborious construct
to offer a free avenue for those who preferred not to pay a trivial
membership fee.

No one even in the commercial would attempt such a back-stabbing
maneuver. Ethics are important to MOST folks.

What's even sadder than the name rip-off is that the server is run by public funds!

I subscribed to see what was going on and so far have read nothing different than much of the stuff on rec.radio.amateur.boatanchors. There is a similar list called otrig-l that is free for anyone to use. I fail to understand any logical reason to set up another list. The digests are freely available to anyone who knows how to get them so you don't have to miss any of the action on the real list. That wisdom and information costs you zip! However if you wish to participate you gotta join the club!

Those whining about the annual fee which is now $20.00 (but some of us paid early and saved $8.00) should consider themselves fortunate to have access to the digests which, somewhat like a repeater, is NOT a God-given right.

I guess there will always be whiners and complainers so maybe it might be a good thing to have a freebie list just for them. They can play around in the sandbox kindergarten level while the rest of us attend Real Radio University.

Interesting to note: There has not been a WORD of this on The List!

I've had great times with the old Drake gear. It's good stuff and reasonable priced. I even run the ole T4/X on the new WARC bands. The 4 position crystal selector swich is good enough to have the low end of 10 mtrs and the other three bands. For 160 mtrs, I use the transceive feature of the pair. Not bad flexibility for the old work horse. I get 100 watts out on all bands.

Michael-

The elitism espoused, justified by the technical competency found on the list and condemned by ad-nauseum discussions of 'radio wax' and 'enviro-political testimonials', can only server to intimidate potential participants of the one-true-list without whom there would be no list.

The implied threat, "no god given right...." (to the digests) fosters no good feelings toward contributing, on my part, and can only serve as additional discouragement to potential participants.

Analysis of your post and consideration of the above leads me to only one conclusion. You must be one of the renegades. This disinformative diatribe has to be a well disguised from me, perhaps clear to my intellectual superiors, attempt to sabotage the one-true-list.

Thermionics forever!

They are emergency communication transceivers for downed aircrew. They operate, transmit crystal controlled on 121.5 and 243.0 MHz. The receiver is a superregenative detector. They use minature and subminature (wire leads) vacuum tubes. They have a depolable dipole antenna (extends fully for 121.5 MHz and collapses for 243 MHz. The rig is about the size of a rectangular pint can and the battery pack (sealed) is about the same size.

Here, here. Guilty as charged--I get sucked in to a good argument as easy as the next opinionated guy, I guess, but I thought I'd pull Grant's chain a little bit, just for fun. Now I've got some nimrod privately emailing me accusing me of having no ethics, having a problem with paying the subscription fee, and other personal attacks. It doesn't take much to start a fight in these tough, down-tech-stock times, I guess. Must be the Comet.

Specs--you want specs? Well, maybe a tip--Use 6146B's as modulators in your Valiant and triode-connect them by connecting the screen to the plate in each through a 100-ohm, 2-watt non-wirewound resistor, and with a little negative feedback, enjoy the smooth sound you'll get. Tim, WA1HLR swears they won't fully modulate the rig, but it looks like they do on my oscilloscope. Stay with 6146A's in the final, and all will be well.

Had to balance my message with some home-grown technology. With a tip of the hat to Pete, W1VZR, from whom I stole the feedback circuit from an early issue of AM Exchange--anybody remember that little publication?

I have one with a built-in T/R switch and keyer. It also has a mod in the
VFO which has a relay switch in a cap during receive so that you don't hear
the carrier leakage back into your receiver. That way you never turn off
the VFO so that it always stays stable.

Rob.

The URC-4 is an Emergency Radio usually used by downed aviators.
They work on 121.5 and 243 MHz with a simple AM XMTR and Regen
(I think) receiver. They are connected via cable to a separate
battery (hard to find). The radios are about 4x8x2 inches and
are Olive Drab or Yellow. They primarily use "peanut" tubes.

Some years back you could find articles re conversion to 2 M AM.

(As you might guess, I have a box full of them, as well! :-})

> I have a "Swan SWR-3" swr meter and would appreiciate it very much if
> someone could email me the specs for this unit such as Max power rating;
> freq. response; where i might find some more info?, etc.

Hi Bob, the SWR-3 specs are as follows:

SWR 1:1 to 1:3
ACCURACY: 5%
IMPEDANCE: 52 ohms
INDICATOR: 100 DC micrometer
ANTENNA: 5 position collapsible
WEIGHT: 14 oz.
SIZE: 6" x 2" x 2"

The SWR-3 can monitor transmitter output to 1KW, (good luck) and is good
from 1.7 to 55 MHz.

Check out my Swan page under "accessories"

Message-ID: <3341EEC6.50AB@worldnet.att.net>
Source record: 121526

To all fellow "BA" lovers:

I must thin out my "collection". I have military comm-nav equipment from WW-II through Korean War era, and test equipment from late 40s through early 80s. I'm not a dealer, just a hobbyist who overdoes it!

If interested, E-mail me and I will E-mail my list back to you. It will be a 32K, plain ASCII file, no pix, just text. If you would like a hard-copy of the list, pls. send a #10 SASE with one stamp to me at the address below.

Thanks for your interest.

The Antique Radio Collectors & Historians (A.R.C.H.) of Greater St. Louis will hold their annual picnic and mini-swapmeet on Sunday, May 18th, 1997. We will start at 9:00 a.m. and a picnic pot-luck lunch (with barbecue) will be served at 11:30 a.m. There is no charge for a swap table but a $3.00 donation is encouraged to help pay for the picnic lunch.

The Picnic is at Tiemeyer Park in St. Ann, MO. The address of the park is 3311 Ashby Rd (between St. Charles Rock Road and Midland Blvd).

This is a family event and you are encouraged to bring friends and family with you. So load up a few radios into your car, put the family and the dog inside and come meet a great group of antique radio collectors and enjoy our club's hospitality!

For more details, please e-mail me at keymaster@stlnet.com

Hope to see you there!

> Thank you, Richard! It's really tragic that some have not looked
>into how well the ORIGINAL BA List works. It's free to all comers
>for a mimimum of 4-weeks inspection.

Actually, the one you speak of is the third BA list. The "original" one was at gnu.mit.edu.

> What's more tragic is that the list owner at tempe.gov chose to
>plagerize the name of BoatAnchors thereby impugning the BA Newsgroup as
>well.

"Boatanchors" is a generic term that dates back to at least the 50s. Hams and ham magazines have used it now for decades. That was the basis of our arguments for the creation of the BA *newsgroup* name, when those who fought against such a name said it's not widely recognized.

>We know this latter was a much careful and laborious contruct to offer
>a free avenue for those who preferred not to pay a trivial membership
>fee.

Think of it this way: With two BA lists and a NG (and now Collins and Heath lists, too) a greater number of hams who are interested in equip-ment of past decades can be reached.

> No one even in the commercial would attempt such a back-stabbing
>maneuver. Ethics are important to MOST folks.

What do you feel was done that is unethical? Choice of name? The name is generic. Free venue? It gives those who've left over the past 12 months another forum to participate in, and brought in new folks who had never sub'd to the paid list (the latter equates to more of the older equipment (and tubes) being saved rather than being dumped into landfills!).

The real Boatanchors-List is at theporch.com. I believe its actual address is listproc@theporch.com or listserv@theporch.com. No subject required, type:

subscribe boatanchors (your name).

You will get a welcome message explaining the list criteria along with a free trial period. After that you gotta pay.

If you want the free list - its at listserv@listserv.tempe.gov. Its new and I have not seen any significant traffic.

Message-ID: <33427927.2948@texas.dseg.ti.com>
Source record: 121540

Due to some recent requests I am repsoting this older article.

If you are the proud owner of older SWL gear like the infamous Drake R7A and
others...there's good news. The original manufacturer of bandwidth filters
known as Network Sciences is thinking of producing various models again. I
recently spoke with the owner, Darryl Kemper, and he said the demand for these
filters is very high...especially the Drake and Collins gear. Soon there will
be ads in QST, Monitoring Times, and Pop Comm asking readers to send in a reply
coupon as to what your needs would be. Network Sciences needs feedback from
everybody so they know what amount of each series of filter to produce. Just
to let you know... these guys built ALL the American made filters for Drake,
Sherwood Engineering (the highly prized 3Khz one!) and Gilfer. Imagine being
able to buy the 6, 4, 3, 2.3, 1.8, etc. filters from the original mfg directly!
Darryl said that crystal technology has come a log ways since the early 80's.
Please contact them by FAX or mail ONLY. Please dont call their regular number
because they dont want to tally using this method.

Contact: Network Sciences
3382 West Osborn Road
Phoenix AZ 85017
or by Fax @ 602-278-7033

Dont let an opportunity like this slip away ...start sending your letters and
faxes ASAP. Remember, they still have ALL the schematics and blueprints for
every filter they used to make and they told me with enough demand they would
be ready for delivery in 90 days! The more demand the less expensive they will
be. All this was written with the express permission of Network Sciences.

Sincerely,

John Berenyi

2659. Eico 360 Wobbulator lore

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-02 00:00:00 UTC
From: "A. B. Bonds" <ab@vuse.vanderbilt.edu>
Message-ID: <3342BF1B.6BC4@vuse.vanderbilt.edu>
Source record: 121543
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

So I've been looking at an Eico 360 sweep generator. What an amazing piece of stuff. Apparently the sweep is generated by feeding a modulating voltage to a loudspeaker, which carries one side of a capacitor. Was this strategy common in old sweep generators?

Anyway, (1) it has no bandswitch. Did it simply make an incredibly trashy signal, with the hopes that the receiver sorted it out? What I find puzzling is that the scales are not particularly harmonically organized, and some of them are even backward. How does this work?

(2) It has a crystal socket, presumably for the marker crystal. I presume it needs a 100 kHz crystal, but is there any special type? Where might I get one?

Thanks!
73 A. B. Bonds

From: w5jv@juno.COM
Message-ID: <19970402.195435.5167.10.w5jv@juno.com>
Source record: 121457

Hello All,

Herewith my annual plea for help finding parts for my old Heath amp. Looking for the power supply KS1 which mates to the KL1 as an outboard, on the floor, out of the way, heavy as iron, accessory. Ditto the smaller P26 which supplied all life as we know it to the HA2 or HA6.

Also seeking three 4-400's (have one; want to put two in place and keep a pair for later) or four newer equivalences.

Thanks for your read; apply within < W5JV @ juno.com >.

73, Doug W5JV

That's a new one to me! Leave it to Eico to come up with a
very low budget way of doing it.

The "right" way before varicaps came out was to use a "reactance tube".
This is basically a tube amplifier with capacitor feedback.
Vary the gain of the tube by changing
the DC grid bias and you vary the effective capacitance.
No moving parts but not terribly predictable as tube gain
and bias points could wander.

The better sweep generators used this method.

The cheaper ones used mechanical means like Eico. Heathkit
used a saturable reactor. The RF coil had an iron core and another
coil was fed a strong sweep current. At high currents the iron
core would saturate, lowering the inductance of the RF coil.
Not a terribly linear method but it did work.

>

> trashy signal, with the hopes that the receiver sorted it out? What I
> find puzzling is that the scales are not particularly harmonically
> organized, and some of them are even backward. How does this work?

It probably had a overdriven oscillator with lots of harmonics.
TV's do not need much signal soeven a high harmonic would
still put out plenty of usable signal.

I don't know about the funny dial scales. Perhaps they added in
a tunable base frequency from another oscillator so the sweep
oscillator could run at a constant frequency.

Never put it past Eico to do funny stuff.

I recall their "5 MC" scopes did pass 5MC, but only because
they had a peaking coil tuned to 5 MC. Anything between
3 and 4.8 was pretty dead.

Also they got cheap and used audio-taper pots for brightness
and focus, so almost all of the adjustment action happened
in the last quarter turn. Definitely not Tek quality!

2665. R-389 info needed

Hi all

Having just bought, but not yet received a Collins R389, I wondered if anyone knows of a site where I can get some info on the set. I found one site with a small picture and a very basic description but am looking for a bit more (tech info, personal views, faults encountered etc..) Not many of these sets find their way to South Africa so info on them here is rather scarce. Feel free to email me with comments on this rig.

Thanks
Vince Stevens

G'day

I am thinking of selling my Alinco DR-590 dual-band mobile, it has both
the DTMF&#65533;Decoder and CTCSS Enc/Dec modules.
RF power output is 5/10/45W on 2m and 5/10/35 on 70cm.

The internal lithium backup battery has just been replaced, and one of
the LCD
globes. It works a treat..any offers.

Also in the offering is a Standard C528 dualband HT with 2x7.2V and
1x13.8 battery packs.This is a well-known rig although the Yaesu FT-50
is kicking butt
compared to most HT's now.

Sundries: Brainer ST-7800 Dualband mobile antenna, 2x10GHz link
transceivers,
Amiga 3000 6Meg RAM/7 serial ports/framegrabber w/ WB2.1 and CDROM
drive plus 1960 Monitor (SVGA).

Any offers for the above preloved equipment, reason for sales ..broke
student :-)
thankyou for your time.

>

I'm not sure when the "wobbulator" was invented, but it was part of _maybe_
the first Identification-Friend-or-Foe (IFF) units used on aircraft during
WWII.

I bought one of these units surplus, and it was a kick to see how it
worked. The wobbulator was used to modulate a VHF transmitter, and the wob
was driven with "audio" that was altered by a number of cam-operated
switches, pots, and I forget what else. The cams were motor-driven, and all
the timings were adjustable.

I suppose the signal was a chirping, pulsing series of tones that could be
changed on a day-to-day basis.

The wobbulator was a cylinder about 2" across and 1-1/2" tall. The thing
was mostly iron (and magnet) and was heavy. Two posts on top connected to
two capacitor plates inside, located just above the "speaker diaphragm"
which was thin aluminum; it was grounded. On the other end were the "voice
coil" terminals. Frequency response was pretty bad.

Can't remember the Mil designation for the IFF unit, but one letter was "X".

Isaac

2680. Re: Eico 360 Wobbulator lore

The wobbulator was used in the APN-1 radar altimeter. The wobbulator was across the tank circuit of the push pull acorn tube oscillator/transmitter. The result was a Frequency swept source. The return signal was beat against the source and the frequency difference was directly proportional to aircraft altitude above ground level (the greater the delay, the greater the frequency difference between the echo and what was currently being generated). The receiver had no preamplifier. The IF was basically audio and the mixer was two diode acorn tubes in a balanced mixer. The antenna "array" consisted of two dipoles, one under each wing or mounted fore and aft along the aircraft belly. One was for the transmitter and one was for the receiver. Altitude readout was on a two scale analog meter. The system even had an altitude hold circuit to provide a sort of altitude clearance autopilot. The APN-1 was perhaps the most successful early FM/CW radar.

Duh. "50,000 mail transactions a month" at, say 2K a mail message is a whopping 100MB, which would occupy a T1 line for about ten minutes out of the month. I always wondered how the old BA admins could possibly spend so much money just running a mailing list, but I believe I'm beginning to figure it out.

> Think "T1 line costs",

We're not moving live audio or video here. Think "28.8 modems" or "ISDN", or think "colocate and piggy back on somebody's line" (either scrounge it for free, or pay a ISP a few bucks a month to host the list.)

>think "$1,000+ software packages and updates",

Think "Linux" or "NetBSD" for free. Think "use an older machine that comes with a license for a stable OS already, and latest sendmail is free from Berkeley."

> think "Unix servers"

Think that Unix runs on 486s just fine. If you think cheap PC-class hardware is too flakey, think that something a few years old, like a SPARCstation 1+, could handle the load nicely and is cheap as all get out without a monitor.

Now, if the BA admins want to charge something to compensate themselves for their labor, and the BA subscribers find the service enough better than the alternatives to be worth the charge, I have no problem with that. And if the BA admins want to take the fees they collect and spend them on overkill hardware and comm costs so they have nice toys and avoid generating taxable income, that's their own business. But don't try to sell it as "just partially covering unavoidable costs."

[Totally bogus crossposting to r.r.a.homebrew, r.r.shortwave, and r.r.swap simply eliminated. Followups set to r.r.a.misc.]

>was at gnu.mit.edu.

A minor correction here....

The original "boatanchors" mailing list was at:

boatanchors@acidqueen.eng.sun.com.

It was maintained on this machine from August 1992 until May 1993.

The successor to this list was at gnu.mit.edu and is now at theporch.com

Minor points, to be sure, but I couldn't let it pass.....

73,

Jim - km6nk

You will note that I mentioned BOTH lists in my reply to the question.
However, in my opinion there is only one Boatanchors-List and it is on
theporch.com.

As Jim Lockwood pointed out there were three different reflector sites
used since he created the reflector with four other fellows in August 1992
to discuss the Heath DX-100 transmitter.

And who is the listowner? Is it you, Bry?

Surely another name can be found for the new list. I do not demean or
denigrate this list - - - but can't help wondering WHY the listowner calls
it Boatanchors.....when that name is already in use in a similar
application.

Gang
i just acquired the TCS-14 tx/rx pair. They look pretty good. would like to put them on the air. The crystal decks are missing in both. Minor wiring mods that can be put back to original if I can find docs. The power connectors were with each unit along with a length of cable attached. No connectors on the other end of the cables. Need docs to wire to power supply with any confidence. They cleaned up well (had to knock the mud wasp neses out of the tx Pa section and blow a lot of dust/dirt out. They are all clean,look pretty good and await tech docs to go further. Can anyone help?? I'll put them on the air and talk to you!!

thanks

If they are mint, expect to pay about what they cost when they were new. $1200 to $1500 or so. Watch out for bad PTOs. They can really cause problems. I suggest try b4 buy.

>
> Thanks in advance for any help.
> 73's WB3GWG Dick Merriman merriman@fast.net

The SX101 was a excelent 10-80 amateur band meter receiver.
The SX101A was idenical with the following exception-

On 10 meter, the 101 covered 11 thur 10 meters (26.9 through 29.7 MHz),
the 101A only covered 10 meters (28 to 30 Mhz).
The 101A had a "converter" input at around 30-34 MHz for Ameco
converter for 6 and 2 meters.

Good luck

D. Pat Breeden WB3KUM/9

I'm trying to get rid of a setup for pirate radio that I bought but was unable to use because I totaled my car. The transmitter is a Heathkit Cheyenne MT-1 shortwave transmitter. It comes with the Heathkit HP-13 power supply, and I'll even throw in the microphone and jacks I was going to replace the old four prong jack with. I'm willing to sell all items (transmitter, power supply, microphone, and jacks) for $100, which I think is a pretty fair price. I'm willing to negotiate if you think it's too high. Also available is a Radio Shack 40 meter antenna and the matching trunk mount for $60, and a 12 volt battery, battery charger, and pair of battery clamp connectors for $40.

Hello all: Recently acquired Collins gear has need for several sizes of "Bristo Wrenches", including sizes #4, #6, and #8.

Are these the same as the tools displayed in the latest Allied Electronics, Inc. catalogue on page 355, referred to as: 99PS-60 Bristol Multiple-Spline Socket Type Screwdriver Set - Inch Size, with an 11-piece set for $46.96?

Where else might these Bristo wrenches be found if the above is not the same or the price is not competitive? Also, which sizes are typically used in Collins gear?

Thanks es 73, Gary, W0AB

Well, greetings from "the horses mouth".

I got such a kick out of reading all of the comments I thought I'd stop by and say HI to my fellow BAers.

Since some are interested in "why" there is another list for the BAs it's simple. I believe (and I'm allowed that pleasure) that on the Internet the mail lists should be free. If it cost to much to run it for free, find another way to run it or simply don't. I'd hate to see a trend started...although I'm sure it will happen. Now, do I think you need to "believe" I'm right? Nope....but I expect the flames anyhow.

Is it run by the City with the strange looking City Hall...that same City that brought you the Super Bowl 1996 and brings you the Fiesta Bowl each year? Yep. Do you think that football stuff cost any tax money? Hmmmm...I think SB XXX cost us about $200,000.

The reason the "Radio" groups are on our server (we also host the Collins and Heath lists) is mainly for testing. We bought a list server software package for $2,000 that we needed to learn how to manage - and test. You can't test a package without running some live data though it...hence the "ham" lists. It worked...we found some bugs (just ask the Collins guys), and at this point we think we have them all crushed. We are already starting to populate the server with some "city" lists now and we feel good about its operation.

Tempe is a big supporter of ham radio - giving us meeting rooms for our club, places for VE testing, and recently a classroom for ham classes. We are installing a station in the adult center and they donated a 2 meter repeater that we maintain on one of the City sites. Don't you wish YOUR City was as "ham friendly"? Enough about the host for the list server. As far as tax money...I see any tax money that "we actually get to make use of" as a good thing!! And who wouldn't?

You'll notice that I have not been pushing the subscription to the Tempe BA list...heck, I work for a City, and as a civil servant I'm sworn to not care if you live or die. Just kidding....but my attitude is...if enough people want it it will fly...if not, it won't. Time will tell. Meanwhile it's an option...not a stab at the other list (that I'm a member of by the way - and enjoy)...not an ego boost...but maybe it is the thing that I can offer to my fellow hams.

Let's get back to talking about radios that warm the shack and the heart!

: So I've been looking at an Eico 360 sweep generator. What an amazing
: piece of stuff. Apparently the sweep is generated by feeding a
: modulating voltage to a loudspeaker, which carries one side of a
: capacitor. Was this strategy common in old sweep generators?

When I was a kid, I had a Heathkit TV alignment gererator that had
a similar sweep arrangement. It was probably a model TV-1. There was
what looked like a modified 4" speaker with a metal disk attatched
to the voice coil. Just above this was 1/2 loop of heavy copper wire
connected to one of the variable caps. Thus, the inductance of the coil
was, I suppose, wobbulated by the motion of the speaker. I think
it was just connected to 60 Hz, but the amplitude was variable.

Thanks for the memory.

Boy I wish I still had my RAO-7 from my Novice days! That sure is a nice radio. I remember that mine was still in a sealed wooden box from the Navy so I was the first to power it up. I don't remember any real drift but then again, as a teenager who was on the air 20 hours a day it was never off.

I checked all of my old shack photos and I have one of my SP-600 (came later than the RAO-7) and BW-5100. Now THAT was when you WORKED people.

I'm currently trying to trade my PRO-2006 25-1.3GHz
scanner for a R390 in Immaculate condition.

Mods? What mods? I couldn't part with my full-featured
PRO-2006 for anything less!

Empirical. =:o Just looking at the callsigns of those now posting to
the tempe BA list shows old hands I hadn't seen in over a year,
and also calls I haven't seen before.

> Please review the just immediate paragraphs. Your statement
>seems to me to be more of personal philosphy than
>_reality_of_purpose_.

Sure sounded good though, didn't it?

>>(the latter equates to more of the

>>dumped into landfills!).

> Mixed metaphor/s? "the latter" (as phrased) is not clear
>to me. Nevertheless, I agree totally with the basic thoughts.

"The latter" was supposed to refer to the new folks who had never
sub'd to the paid list. They might not have been interested enough
in BA gear to have paid to sub, but now with a free list (and all
its exposure!) hopefully their interests will have been sparked
into salvaging gear found in the garage, basement, attic, neigh-
bor's garage, et cetera. Our worst nightmare is hearing of old
gear and crates of tubes being tossed into a dumpster. If it takes
a second list to help save some of the older equipment from extinction,
then so be it.

Don't forget that in the past years, everytime someone on the BA list
brought up the idea of going to a newsgroup format (such as we now
have here), almost everyone else would shout "NO! It will dilute
the group!" It took going to a paid subscription to bring about
the creation of this rec.radio.amateur.boatanchors forum. And
mention of a future $20/yr fee (one week of meals for me),
tempe.gov simultaneously created the free BA, Heath, and
Collins lists. I believe we're better off now having all
these wonderful nets.

Doug,

I have seen this phenomenon in my HQ 170 when I use the headphones. I assumed it was due to impedance mismatch of phones to radio, but never thought too much about it - just turned the volume up a little. I forget what impedance the radio expects to see at the speaker, but you might check that vs. the speaker you are using. Of course, it may be something else entirely!

Michael - how is that the "REAL BOATANCHORS" list?

Is the other one somehow less "REAL?"

If so, why? Because it only has 230 subscribers instead of 800?

I realize it's not nearly as good, but there's no need to demean the
other group publicly is there?

Responding to: jeffreyh@Hawaii.Edu (Jeffrey Herman)

Jeff:

You make some very coherent arguments in debate but,
obviously, I cannot agree with all. Rather than rehash all,
I'll pick up on your closing paragraph with some additional
comments.

>What do you feel was done that is unethical? Choice of name?

Unethical may have been too strong but an identical choice
of name for BA list at Tempe is totally foolish IMO.

>The name is generic.

Not quite! Certainly the PHRASE is generic but the
application is NOT. Tempe's choice is foolish for another
Mail List because it causes confusion for those that are seeking
the "Boat Anchors Mail List" when responses from helpful persons
will point to one or the other; either way, IDENTITY is DILUTED.

>Free venue?

This very newsgroup (alt.radio.amateur.boatanchors) already
gives "free venue". Is there something wrong with this? The
"third prong" from Tempe brings confusion and seems to add
nothing more.

>It gives those who've left over the past 12
>months another forum to participate in, and brought in new
>folks who had never sub'd to the paid list (....)

Where are your data? ;-)

Please review the just immediate paragraphs. Your statement
seems to me to be more of personal philosphy than
_reality_of_purpose_.

>(the latter equates to more of the
>older equipment (and tubes) being saved rather than being
>dumped into landfills!).

Mixed metaphor/s? "the latter" (as phrased) is not clear
to me. Nevertheless, I agree totally with the basic thoughts.

-=Tony=- W6ANV San Francisco, CA

ps: I find it strange that the "owner" of the Tempe BA list
is not participating in the exchanges here. If he/she is,
he has not ID'd as such to my knowledge. I'd like to hear
(read) what HE has to say. "From the horses mouth", so to
speak. So would others like to read, I presume.

Michael, I really don't think that Bry is the Tempe BA list owner
because he's a reasonable guy IMHO and probably does not have the time
or inclination for tom-foolery.

Sadly, "it" is someone else who refuses to speak straight-out
for his decisions, on this NG at least. Perhaps he speaks elsewhere.
This whole Tempe BA "adventure" reeks of BAD JUDGEMENTS by the copycat.

Fear not! ..the whole debacle will "shake-out" given more time.
While we all continue to ENJOY this FREE boatanchors NEWSGROUP, eh?

2743. Seeking KENWOOD H.F. product line info...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-05 00:00:00 UTC
From: A Redshirt <occupant@psyber.com>
Message-ID: <01bc4190$0d1c8440$57c087cf@packard-bell>
Source record: 121428
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.swap

Hello out there:

I'm trying to figure out the lineage and features
of the Kenwood HF products. The question is
"Which came when, and what did it do? (and
what did/do you think of it?)".

For example, (with apologies to all Kenwood
owners; this is from memory!) the TS-520
came out in the late '70's, "old" ham bands
only (no WARC coverage), put out about 100
watts with tube finals. Outboard VFO
available for split frequency operation.

The TS-520S(?) was pretty much the same,
but had the digital readout (?).

The TS-820 came out in the late '70's shortly
after the 520. "Better" receiver, "old" ham
bands only (no WARC coverage), about 100
watts out from tubes (pair 6146?). Digital
display, outboard VFO available for split
frequency operation.

TS-830, then TS-850. (Here my rusty and
bent stack pointer fails!) Coverage, features,
and options unknown.

What followed? How did the features and
performance stack up between the different
models? What were the features of each,
and which model followed which?

Please mix your opinions in with whatever
facts you have, as your opinions are very
interesting and valuable to me.

Yes, you have guessed it; I want to finally
upgrade the operation here, and I'd really like
your comments and opinions! Especially the
opinions!

Thanks in advance for reading this, and for
your time.

I have a similar one made by Precision. I believe that there were older
ones which used an electric motor attached to a bent rod which wobbled
and changed the capacity.

Help, I am trying to get this old radio working again but I found out that it needs a power transformer. If you could help me locate one or maybe you have an old junker radio with a good one, I might be interested in buying that from you.

I also would like to find a manual or copy of one to help me in this project I've started.

All positive responses or leads appreciated.

call at 704 286-0194 or via e-mail.

2750. SP-200 Restoration Project

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-05 00:00:00 UTC
From: Bill Smith <bilsmith@pacbell.net>
Message-ID: <33469A72.A73@pacbell.net>
Source record: 121435

Hi,

A Hammerlund SP-200 (actually a military version of same) just
followed me home. It looks like it will work well after a
new coat of paint and parts replacement. but....

The crystal filter module was very badly damaged. The crystal
is missing and the 6-position wafer switch has been broken
(then the pieces were thrown away UGH!). I have repaired the
shaft on the phasing control, which was also broken.

Also, both dials slip because of chips missing along the outer
edges (the dials are an integral part of the tuning mechanism).

Further, many of the knobs are missing. This
set has "communication style" knobs with pointers. I believe
the later Hammerlund knobs had pointers with a very simple
straight metal pointer. The pointers of the remaining knobs
on this set are slightly curved in, as if they were of an older
design. A picture would be worth a thousand words in this case..

I wonder if anyone has a junker that might have (1) an intact
crystal filter module, (2) bandspread and main tuning dials, and
(3) knobs (either new or old style as desribed above). I need
5 of the smaller knobs and one large tuning knob.

I need the following three power transformers for console TVs. These are the large black tar filled type that use an oil resonant capacitor and were found in 19" and 25" TVs from the mid/late 1970s.
1. Zenith #95-3172-01 from 23/25GC45 chassis.
2. G.E. EP88X22 or EP88X14 from 25YM-C chassis.
3. Magnavox #300316-2 from T995-02 chassis.
Part numbers are stamped on the winding cover plate on one side. I would prefer someone in the southeast U.S. and not pay over $10 or $15 each (used). Email or call 334-347-5281. Thanks.

The following items for sale plus shipping. Call 2058801207 for more info

-Philco 71 chassis and speaker. Speaker needs reconing, chassis has two tubes and has one of 2 shields. Chassis looks complete. $35

-ShallCross Resistance decade box, nice large unit #832 $15

-RCA crystal unit model xc-5-ks, freq = 100 kc $10

-Hewlet Packard Standing Wave Indicator. Nice condition, tube type $12

-Signal Corps WW2 vintage frequency meter TS-174B/U good condition $25

-Chrome plated power amp, uses no pc board, solid state, but uses point to point wiring, no maker name. Could be a jukebox amp. nice physical condition, untested $15

- Leeds and Northrup, Millivolt Potentiometer #8686 with paperwork, nice metal box $12

-WE #A2B portable Public Address amp, looks good with manual and mike $12

-EDC precision Voltage source $12

-TPC Logrithmic converter $12

- Tektronix rack mount for 160 or other series modules 18 inch $12

-Tektronix 161 pulse Generator $9 no tubes, good conditon and complete

-Tektronix 360 Indicator $25

-Variac, PowerStat 136b in table case, excellent condition, 0-140v, 3KVA $30

-Small Realistic Stereo Amp and am-fm tuner, TM-101, SA-101 nice shape 20 dollars for the pair or sell separate. 12 dollars each

-Early Mechanical Watt meter , Singer Metrics model DLWEW-S $15

-Westinghouse Micro Ampmeter, large looks new,larghe with 340 degree movement model kx-241 $12

-Small Viscount Ac-Dc set, green and white, looks complete , 1 tube missing and case cracked, $10

The following tubes are used and checked,

-New in box 5axp4 picture tube $20 or best offer

-Globe O1a, mostly RCAs $8 each

-RCA, tungsol 12ax7 $3 each

-RCA 7199 $5 each

-Tungsol 5881 looks and checks new, $8

-GE 5star 6087 $3

-Sylvania 6sn7WGTA New in Box $5

-Misc used 6sn7s $2 each

Kenwood was first marketed under the name Trio. They made tube type
equiptment. One of their products was a 550 kcs-30 mcs receiver that
resembled the S38. However it had a power supply, an RF stage and two IF
stages.
Later the name Trio-Kenwood was used. Peter Christensen VE6LP

Hi Norm

The term wobbulator probably came from the cute little
device used in the WWII APN-1 Doppler Radio Altimeter. The transmitter
was frequemcy modulated by the Wobulator unit with was a split stator
capacitor deposited on a ceramic substrate with a speaker like diaphram
voice coil driven. An audio oscillator drove the wobbulator at
different levels, one for the 0-400 ft. range and a second level
for the 4000 ft range. The APN-1s were converted to use in the 432
band after the war and the wobbulators were usually removed with
many of the devices seeing service as FMing devices in sweep generators
like the Eico you are looking at. Watch the swap meets as you still
see these APN-1s showing up. The wobulator looks like the magnetic
portion of an old style PM speaker assemble and is usually painted a
dull red (like glyptol) color. Reference " Surplus Schematic Handbook"
CQ magazine, Cowan Publications, 1960.

Dave, thank you very much for your excellent reprise. Flames? NAW,
for such well based commentary! You bettcha, I'm sure many of us
appreciate your good work in Tempe. Yeah, also the description on the
close liassion between the city fathers and ham radio.

Many words have been voiced on the "boatanchors" issue which now
should be laid to rest. I hope. For those that I have sent of an
apparent offensive nature, I apologize. It's clear that I "assumed"
too much!

What I said brought me two _virulent_ flames by private message and
one public. Disheartening but best ignored in my view. It is the
way with some myopic people.

I sure hope the "proofing" of your Tempe system has worked well.
Take care,

-=Tony=- W6ANV

Speaking of Eico 360 Sweep generators, I just received one.
(Thanks Larry) along with an Eico 377 Audio gen. I also
have an Eico 147A signal tracer. I would very much like
to get manuals for these units. Copies would be fine.
If you have any or know of sources please let me know.
All costs cheerfully covered. Thanks and 73 Gary

This appears to be the premise behind the RCA TMV-128-A shown on page 169 of Rider's vol 7. This type of device provided sweep type function in the A.M. band I.F. frequency range so that those "Hi
Fidelity" I.F. transformers could be "flat topped" instead of "peaked".
Does anybody have a suggestion on commonly available equipment that can provide the sweep function in the A.M. I.F. frquency range? Better yet, does anyone have an RCA TMV-128-A to spare?

Hi,
I'm looking for an electronic T/R switch to use with a Johnson Ranger and HQ-170 to provide full break-in CW capability. Commercial or homebrew, doesn't matter. I'm even interested in a broken one as long as it's repairable. I know many of these old T/R switches were bandswitched, and I'd prefer one that covers 160-10, but 80-10 is OK, too. I'll buy it, or have various items to swap - drop me a note via email.

2779. FS: Lionel J-38 with original box

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-06 00:00:00 UTC
From: keymaster@stlnet.com
Message-ID: <860373571.20926@dejanews.com>
Source record: 121373
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.antiques.marketplace,rec.antiques.radio+phono

I have for sale a Lionel brand J-38 in its original box. The top of the box says "The Lionel Corporation New York, N.Y." Each end of the box says "Signal Corps U.S. Army Key J-38 File #13946 Phila. 43 Made by The Lionel Corporation New York, N.Y.

Lionel keys are less common than some of the ones from other manufacturers. In addition, the presence of the original box is uncommon, indeed.

Bottom of box is in very good shape with only a water mark underneath. The top of the box has some writing (some numbers from a wax pencil) and some damage but is complete. I have reinforced the cardboard top to prevent any further deterioration. One side of the box has "Tel Key" hand written on it.

The key inside is in excellent original condition and includes the circuit closer and all accessory hardware. I don't think the key is unused but it's a pretty good one. I would be happy to give any additional details.

Asking $65.00 plus $3.00 shipping.

Thank You!

I missed the original post. The 10/11 was so "MIL-SPEC" that it was
a CB set in disguise.

It was 1971, the year before I was licensed. I was reading QST, but
either it happened just before I subscribed, or the story never made it to
QST. I've seen mention of the rig in 73, but the back issues I later got
were incomplete and I missed some of the story.

The 10/11 was advertised in 73, maybe for only one issue. It was a ten
meter transceiver, with receive only on CB. The idea being promoted
that you'd use the CB receiver to monitor band conditions (there being
regular activity there), and when you started hearing DX, you'd move
to ten and fire up the transmitter.

There must have been an editorial, I think against it but I never saw it.
I did see follow letters for and against the rig.

The concern was that it was meant as a CB set, and the ten meter part
was to make it look legitimate. The bands are so close that the rig
did not need to be modified to cover CB on transmit. Just a wire (or
something like that) that inhibited transmit on CB.

So the rig disappeared as a Swan rig. I forgot to mention that the
original ad does treat it as a Swan.

But "Siltronix" kept making the rig. A few years later, somebody
had a CB magazine, one of those less than above board kind, at a Field
Day and passed it around like it was illicit reading material. I'm
sure Siltronix was advertising in it, though I can't remember if it
was a vfo intended for illegal CB use or the 10/11.

I would imagine that the 10/11 is as good as any Swan rig. I never saw
one, but have always assumed that it must have been based on one
of the other Swan rigs of the day, and made in the same factory as
the other Swan rigs. But it does have a certain illict history.

Doug,
If you are interested in building a T/R switch, here are some referances
which should be of interest:

"Solid state T-R switch for tube transmitters", Ham Radio Mag, 6/80, p58.
"Quieting amplifiers for fast CW break-in", Ham Radio Mag, 1/79, p46.
"Diode Controlled Break-in", 73 Mag, 1/65, p 16.

These are quite simple and should do very nicely.
73,
Ray, W4BYG

2806. INFO: CRYSTALS FOR KENWOOD TS-520

Message-ID: <01bc43ba$23ef61c0$2bc95fcc@rstewart.execpc.com>
Source record: 121308

Thanks to many of you I can now give you a good description of the unit my father-in-law had for many years (he purchased it 9/9/77).

Collins 75A-4
serial #294
4x1 reduction
standard filter (only one in unit)
manual (1 June 1964 printed at bottom of front cover)
no dents
very very minor paint scuff on right top flange, 99% of original finish
no broken or missing parts
horizontal scale is yellowed but still readable
dusty inside and I will not clean it as I don't want to break something in service until a month ago when he died at 89

If you would like to make an offer please E-mail me. The highest offer by next Sunday 4/13 at 6pm CDT gets it.
Shipping and insurance costs are in addition. Unit is in WI.

Bob

2829. R-390A Antenna Connector - Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-08 00:00:00 UTC
From: rhys@ix.netcom.com
Message-ID: <5idl2q$hsr@dfw-ixnews5.ix.netcom.com>
Source record: 121323

Hi Gang --

Having finally gotten tired of the alligator clip constantly falling off the paper clip on the back of the ol '390A at the twinax antenna connector, I thought well I'll break down and actually get an adapter. That way I can plug my PL-259 terminated antenna into the EAC or unplug it and plug it into whatever I'm working on. Simple in concept, eh?

So after trying roughly twenty parts dealers and forty surplus type folks at the Timonium Hamfest I thought I'd call Connector World in Seattle and well... as their name implies. So I spoke to Connie there (forgot to ask her if that's her real name or an assumed name at work) and said do you guys have either a UG-971U, UG-970/U, or a UG-636A/U -- all of which can be made to work as they go from twinax to either bnc or uhf. After a moment she tells me I'm in luck. They've got both the UG-970 and the UG-971 in stock. Wonderful I says. Prices however are not. The '970 is $49.50 and the '971 is $65.00. Arghhh.

While I find my paperclip arrangement frustrating, I do not find it $65 worth of frustrating. I thanked her for her time and resolved to go to the source -- the BA gang.

As many R-390A's as are still in service, there must be a source for these adapters. Does anybody know of one???? I would be most grateful (as I'm sure others would be). Thanks for the help.

2831. WANTED: Drake 2-NT novice transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-08 00:00:00 UTC
From: k5dh@dlep1.itg.ti.com
Message-ID: <5idn1g$oba@sf18.dseg.ti.com>
Source record: 121325

Looking for a Drake 2-NT novice transmitter to go with my nice old 2-B receiver and 2-BQ speaker/Q-multiplier. I'm not a collector, so I'm not looking for a "collector grade" rig. I plan to use it on the air, so I need one that's either working or repairable, and in at least presentable cosmetic condition (the receiver is a solid 9+ condition so the transmitter needs to look pretty good also).

I don't have anything to trade (except for a very nice Heath HM-102 VSWR/Wattmeter), so this will have to be a cash sale. You do still accept cash, don't you?

Anybody have one of these old novice rigs for sale?

73 and thanks!
Dean, K5DH

Source record: 121330

hello,
name is mike and qth is florida. i have a heathkit s.b.-102 h.f. transciever for sale. i used the rig when i got my tech+. reason for selling is i got a drake tr4c that i like better.

radio comes with station monitor (clock, s.w.r. meter and phone patch), power supply/speaker and hand microphone. does 80 through 10 meters (no warc). for those who don't know, this is not a digital rig! if you are not familiar with analog equipment, i would suggest you not purchase this radio.

asking $150.00 for the set. would be interested in trades on other h.f. equipment. not interested in v.h.f./u.h.f. stuff. will discuss shipping.

also have an external v.f.o. for a heath sb-104. uk if it works. will trade for ???? or $40.00 shipped.

thanks for reading and 73

2837. Wanted: Kenwood manuals

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-08 00:00:00 UTC
From: davidj@salsgiver.com
Message-ID: <334d8911.1719551801@news.alterdial.uu.net>
Source record: 121331

I am looking for the following original or reprinted copies of the
following Kenwood equipment: I will also pay shipping and copying
costs if anyone has any of these manuals..

Kenwood TS-700SP - 2m ALL MODE TRANSCEIVER
need service manual

Kenwood TS-600 - 6m ALL MODE TRANSCEIVER
need owners manual and service manual

Kenwood R-599D - COMMUNICATIONS RECEIVER
need operators manual and service manual

Kenwood T-599D - SSB TRANSMITTER
need operators manual and service manual

Also, if you know of anywhere I can obtain these, please let me know
via email.

Thanks,

Dave

2838. Re: source for boat anchor manuals?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-08 00:00:00 UTC
From: randyc3@aol.com
Message-ID: <19970408201500.QAA01876@ladder01.news.aol.com>
Source record: 121332

I have tried several sources for Boatanchor manuals and have gotten crappy quality, copy-of-copies. Pages were skewed, upside down, etc. I guess Hams dont care about quality. At least I got my money back.

My experiences have been confirmed by many people after I posted a complaint about the quality of manual reprints in the Boatanchor mailing list.

The one source of manuals that I have been happy with is The Manual Man., Pete Markavage. Of course, I have not bought from all the sources!

I have purchased several manuals from Pete, and they are first class quality. When there is a fold-out schmatic, he copies it on an original size sheet. The other guys try to fit is on multiple sheets. No connection, other than a happy customer.

Pete Markavage (908) 238-8964

I have not purchased any reprints, just new manuals from Robert Fowle, The Hammarlund Historian. I would also try him for reprints, especially Hammarlund stuff. He has a web page somewhere.

2839. 8122 Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-08 00:00:00 UTC
From: boyd <boyd@humboldt1.com>
Message-ID: <334AAFEC.3D1C@humboldt1.com>
Source record: 121333

For Trade:

I have 2 NEW TESTED 8122 Tubes from Berle Elect.
in the shipping boxes.

I would like to trade them for 2 3-500Z Eimac tubes,
new or a pair that has full output and not brown.

I would sell them for $200.00

Thank You,

Boyd N6DMF

I have been approached by a local ham to assist in the disposal of a
Hallicrafters Sky Champion reciever from the estate of a silent key.
I have not seen the radio, but it is described as working and in good
condition. It was used as a bedside receiver by the owner until his
death about a year ago.
I would like to get some info on it's value so that I can post it here
for sale. Proceeds of the sale will go to the local radio club.
Thank you, Greg K3EWZ (Phila,Pa. area)

>andywilliams@worldnet.att.net

Some thoughts from my HQ-140 experience 20-odd years ago.

If 2 disc caps are leaning too close they might parasite.
Spread them.

If it is not previously repaired, you might be looking at a worn shaft
or shaft bearing on the main tuning cap.

I believe the Manners are some of the best radios going
of any sort.

I have a HQ-120 I meant to solid-state until I learned it might be
valuable as a collectible.

Hope that helps.

You can use a high voltage NPN for that. I have one in my DX-100 and it works well. Mine is NTE2303 TO-220 horizontal output type. A high voltage mosfet might work also. They have those that go up to 800v and beyond.

With the solid state device, key click is much more controllable. I would assume with a mosfet, with its large gate capacitance, a resistor in series with gate would be all you'd need to control click.

2862. Re: Bristo Wrenches

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-09 00:00:00 UTC
From: hoff@america.com
Message-ID: <5igu96$l93$1@defiant.america.com>
Source record: 121258

Hi ,

Here's a repost of some info on these wrenches. I just bought
some and you can't beat the price.

Conrad hoff@america.com W8MHH

I bought some from them (McMaster-Carr) this summer,
and they've got all the sizes you'd ever want. Here's the same list
that was posted several weeks ago, but with current
prices (I think) and whether they're four- or six-flute.
They call 'em Spline L-keys.
They have both short-arm and long-arm types, and drivers, and
insert bits, and lots of other stuff.
For those not familiar with McMaster-Carr, this info was on page 2183
of their catalog. LOTS of other stuff.

Phone: 708-833-0300. They take plastic.
Also, they are on the webb.

DIA. FLUTES CAT NO PRICE
.033 4 + 7048A11 0.70 #
.048 4 + 7048A12 0.60 #
.048 6 * 7048A13 0.58 #
.060 6 * 7048A14 0.60 #
.069 4 + 7048A15 0.58 #
.072 6 * 7048A17 0.53 #
.076 4 + 7048A16 0.55 #
.096 6 * 7048A18 0.53 #
.111 6 * 7048A19 0.55 #
.133 6 * 7048A21 0.83
.145 6 * 7048A22 0.88
.168 6 * 7048A23 0.98
.183 6 * 7048A24 0.98
.216 6 * 7048A25 1.15
.251 6 * 7048A41 1.88
.291 6 * 7048A42 3.10
.372 6 * 7048A43 4.55
.454 6 * 7048A44 8.65
.595 6 * 7048A45 13.75

Those marked # are included in a set of 9 short-arm wrenches, Cat.No.
7048A54, for $6.40. There are more sets. This one looked best to me.

Collector quality tube amplifier

For Sale:

De Vry Model 2830 Tube Audio Amplifier (mono)
Serial number 4708

Transportable with removable cover. Cover contains a 12"
speaker with a leather flap that uncovers the grille. Flap
is in excellent condition, and snaps are intact. All cover
latches are fully intact and functional. Leather carry handle
is also in good condition.

Unit operates perfectly (I tested it myself using a microphone
and the volume is excellent with no hum or any observed
problems)

Tube lineup:

6J7 mic preamp, 6SN7 phono preamp, 6V6 driver,
pair of 6L6G's for output, and 5U4G rectifier.

All ID plates intact and in good condition, original knobs.
1 of the 3 filter caps has been professionally replaced. Other
2 are original.

No modifications of any kind visible. Unit is overall in
extremely good condition. Speaker lead-in wire has been
updated, but the original plug connector is intact and
fully functional. Mic and Phono input jacks are 1/4".
In addition to the 'Main Volume' control, there is a
'Mic Volume' and 'Tone Compensator' control as well. The
metal label plate is silver with red circles for scales,
and the De Vry logo. Excellent condition. Great addition
for any 'tube amp collector'

Interesting unit - learned from several emails this amp was
used in WWII to amplify movie projectors set up in portable
circumstances, with mic input from an announcer and line
input from the projector.

Case is a very dark hunter green with leather corner protectors,
all of which are intact. Inside of speaker lid is lined in
velvet.

$185 including shipping anywhere in 'lower 48' (rather heavy)

Thanks to the many who have responded with historical info and personal anectdotes/WWII experiences with this unit.

Thanks,

Dave gekko95@ix.netcom.com

That won't work, either. The command line should read:
subscribe glowbugs your_email_address
(you need to state the listname).

For those not aware, Glowbugs is an email list devoted to homebrewing
with tubes. It's an active list that has regenerated quite an interest
in building. I think the book on regen receivers has been rewritten
due to the activity on there!

I have the following 2 units for sale. Best offer by Sunday @ 6pm takes them. They are each for sale separately. The DX-40 Amateur Transmitter is missing the little access door on the back. It is also missing it's crystals although there is a box of them here so I'm pretty sure I can come up with what is missing if the buyer can describe it. The HW-8 Low-power CW Transceiver looks complete. Both units are sold as is because I don't know how they work or how to test them. I do have manuals for both units

2885. FS Collins RE 75S-3C - Excellent A+

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-10 00:00:00 UTC
From: jbalch <jb@mail.org>
Message-ID: <334CD57D.3F3C@mail.org>
Source record: 121276
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I am considering selling my Round Emblem Collins 75S-3C which is in A+ superb condition. It's just been recently aligned, and includes the 2.1 kHz SSB and 500 Hz CW filters. It is a superior example of the last S-Line receiver built by Collins Radio. I'm taking email offers due to the fact that I do not know the market value of units like this one. If you buy it, you cannot be disappointed because of its extraordinary electrical and physical condition. Will consider trades including Rockwell Collins KWM-2A - 312B-5 or Collins KWM-380. 2887. Questions on using 40m ARC-5 transmitter on the air

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-10 00:00:00 UTC
From: k5dh@dlep1.itg.ti.com
Message-ID: <5iip08$o39@sf18.dseg.ti.com>
Source record: 121278

I have the opportunity to purchase a brand-new ARC-5 transmitter,
still in its original shipping/storage barrel. It's the 40-meter
model (7.0 to 9.1 MHz, I believe).

I know it requires 24 VAC for the filaments, and that they can be
rewired to run on 12.6 VAC easily.

I also know that they use the same B+ supply for the smaller tubes
as well as the 1625s, and that this could be split to allow higher
B+ to be run on the PAs.

Can someone tell me what I need to know to put this ol' workhorse
on the air? I've never used one, and it sounds like a fun toy. I
don't want to hack the thing all up, but I do want to make it so
that I can use it.

::::: RADIO / ELECTRONICS TRAINING MANUALS :::::

Published by:

National Radio Institute
Washington, DC 20016

Excellent coverage of electronic principles, components, and circuits
for the beginner. Also, a good review for those of us who have been at
this craft for a while.

All in excellent condition. No tears, stains, or underlining.

16 manuals, total.

PRICE: $12.95 (I pay postage)

Jacob Worthington
AA4FM
Conway, Arkansas, USA

I have a real nice Barker & Willamson 5100 transmitter that I would like to trade. I am interested in Drake, Collins and Hallicrafters gear. This transmitter looks and works real good. However, I will not ship due to past experiences with equipment of this weight class. It is therefore pick-up only in Fremont, CA (San Francisco Bay Area), sorry.

The only reason that I am offering this piece is that I don't have room for everything and I want more of the above equipment. I also have the manual.

For more info. email me or call me at (510)657-8341 (evenings)

> I think it was based on a National NCX-100, but I'm not sure.

NC-100XA. Compared to the NC-100, the NavShips version added another RF
stage (for better image rejection and LO-radiation suppression) and had
somewhat modified (simpler, lower power consumption) AVC and AF stages.

In order for the unit to command the minimum price he is asking the unit should be one that on a scale of one to 10 would be at least an 8.5 or better with original manual and from the original discription I do not think it meets this criteria. There should have been a far more detailed discription of the unit.

What you have here is a blind auction, How is one to know what bids have been made and are they really legitimate. You run off a lot of potentially serious buyers with this approach. Just give a full discription set the price and offer a money back guarantee if condition does not meet expectations, For that kind of money to deal any other way the buyer is at a real risk.

I've done it. A stiff rotary wire brush will get off the paint. Some people
suggest paint does not stck well to this kind of metal. I've had good
luck with a pretty standard black spray paint. The paint has stayed on
for 5 years. This radio is *not* heavily used, so your milage may vary.

> you used to remove the old lube and what do you reccomend for new.
> Any special tips?

My R390A's had lots of congealed dark brown grease in these areas.
Alcohol and tricloroethylene did a good job of removing the gunk.

To relube I used small dabs of reddish auto joint grease on the cam lobes and
30 wt oil
on the rollers. This seems to stay in place and not bind up as much
as the original stuff.

The original lube specs were appropriate for equipment that had
to be usable across the mil temp range, and with lots of scheduled
preventative maintenance to keep old grease from seizing up--
not necessarily the best for today's usage and maintenance patterns.

2917. Icom R71A for R390A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-11 00:00:00 UTC
From: "Morton L. Denison" <mdenison@mail.ptdprolog.net>
Message-ID: <334E7FB8.538B@mail.ptdprolog.net>
Source record: 121211

In order to promulgate the existence of a completely boatanchorized hobby, I offer the following trade:

I'm looking for a pristine late model R390A (EAC or later) in great shape cosmetically and mechanically. The closer to Rick Mish quality the better. I've got an Icom general coverage R71A receiver in great shape which has the optional FM Unit and DC power cable kit. It's worth around $600. If anybody is tired of knob turning, let me know what we can work out. I'd prefer someone with in driving range from SE PA - I paid to have a 390A shipped once.

Email or call 717-755-6953 evenings.

Mort Denison - York, PA

2918. KT 320 SCHEMATICS (LAFAYETTE)

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <334E6468.4FD@revealed.net>
Source record: 121212

I'm working on this older tube type gen coverage receiver for a
ham-to-be we hope. He picked up this rcvr to aid with code. Fortunately
I had the original construction manual for this unit and will be able to
align it properly. However,I have no schematics which appear to be
missing from the manual (Page 31-32 is missing).
Some the the tube voltages are way out of specs, although there are
numerous errors in the manual. W7FG and Michelle do not list this
unit,HI-Manuals does but don't need $18.00 worth of data.
Anyone out there in tube land have a schematics for this unit?
Any reasonable price im sure will be ok.

Those things are prett expensive. A cheap alternative is the pyrex
glass replacement unit from a Coleman gasoline lantern. I bought a
couple of Chinese equivalents when I lived in Botswana. They work
great!

A friend here in CA was offered $5,000 for his a year or so ago..a little
rarer than some others. I know the fellow who made the offer and it was a
serious offer. My friend decided to keep his receiver.

You can find a photo of a good sx88 on the cover of last years Antique
Radio Catalog.

It appears that we are on the verge of an auction here.

All the folks who think that SX-88 is overpriced and have one for sale at a lower price are welcome mail an acurate description and your best price FOB Atlanta GA (you can use 30306 to calc shipping)

I'm serious, I would like to own one of these.

Do I hear $500?

How about $400, $350????

Whoa, is that $225 and $canadian at that !!!!!!

Please let me know what you have via EMAIL.

If this generates any REAL SX88 action, I'll post.

I'm also keen on playing with some Geloso gear.

I need the manual and schematic for the Heathkit HP-23 power supply.

Note that this is NOT the same as the HP-23A, -23B, and -23C. The
HP-23 is an early model and it is different than the later models.

I already have the manuals for the HP-23A and HP-23B supplies.

If you have this manual, may I borrow it and make a copy? I will
pay all postage costs, treat it carefully, and return it quickly.

Thanks!
Dean K5DH

1. HF Wattmeter, 2-30 Mhz, Model ME165, from GRC-122,142, 26D radios.
Includes 600 Watt FS wattmeter movement with internal 50 ohm air cooled
termination. Also provides VSWR measurents on antennal load. N
connectors in and out, but can be changed to SO-239 types in a few
minutes. Units are in like new condition from depot pack.
$50 plus ups on 22 lbs from zip 95827

2. R390/390A type "C" adaptor cable jumper. Has type "C" male
connector on one end of a 15" length of RG-214/U cable and a
PL-259 male connector on the other end. A solid solution to
the antenna connection problem with these receivers if the
"C" connector input is satisfactory to your needs.

$12 US First Class postage prepaid CONUS

3. RG-62 75 ohm jumper cables with BNC male connectors on each end
10-15" lengths, $2.00 each pp conus

4. TA/312PT style handset with PTT switch, coil cord, and connector
as used on military radio sets such as GRC-19, GRC-106, GRC-3,4,5
5,7,8 etc. Used, but tested $10 plus UPS on 5 lbs from zip
95827 Sacramento

5. 28VDC/50 amp power supply, Mil PP 4763A, Like new from depot pack
115/220 single phase primary. Metered for DC Volts and Amps,
with AC circuit breaker. Will deal with dynamotor loads and
has been used to run the 618T(3) system, ARC-2, GRC-8, GRC-9,
GRC-19 GRC-106 without a single burp.
$150 with docs, prefer pickup, but will ship for additional
$25 for packing materials. weighs 125 lbs and ships at just
under 150 lbs ups. It is rugged enough to make the trip and I have
shipped a few to date without any problems.

Thanks for the read

Tnx es 73

>I beleive you'll be holding on to this "rare" radio. Then again...a fool
>is born...

Considering that there are a number of current production rigs that sell for over $4,000, who's
the fool? All the Yeasu FT-1000D's I want are only a phone call and credit card number away.

Certainly, we've all seen old radios at hamfests that were grossly overpriced. Most of the time, the overpriced units are not rare enough, or in good enough condition to justify the asking price. Usually, those radios go home with the seller.

Wish I had enough disposable income to buy an SX-88. Well, maybe someday.

I am posting this Collins listing for a fellow ham in California who is not on the Internet. He has a late serial number Collins KWM-380 (ser# 1417) with no accessories, but mods 11,12,13,14,15 and 18 done by Rockwell Collins during 10/82. The KWM-380 was the last amateur radio produced by Collins. It is a microprocessor controlled frequency-synthesized transceiver with two VFOs and LED display. Price when new was $2,995. Includes manual. Sale Price is $1,900.00 - - - plus shipping - - - from Los Angeles area. Contact Leo, KJ6HI at 310-670-6969. I have not seen this transceiver, so you'll have to speak to Leo directly to verify all details. The facts and information provided here are his representations.

From: "R.E. Dodson WB5APD/4" <rdodson@worldnet.att.net>
Message-ID: <33504275.C0C@worldnet.att.net>
Source record: 121162

FOR SALE- I have a Yaesu FT-901DM station that works perfectly and is in "MINT" like new condition. Will sell items seperately. FT-901DM just back from Yaesu for alignment to factory new spec's. Has 30 day warranty from Yaesu for $575.00.
Also for sale SP-901P speaker/patch $85.00,
FV-901DM remote vfo with 40 channels memory and up/dwn scan $230.00,
FC-902 500 watt ant. tuner $150.00.
Original YD-844 Desk Mic for 901 station "not a scratch" $70.00. All prices plus
insurance and shipping via Post Office. All equipment works perfectly and comes in original boxes with all manuals. This is probably the nicest 901 station around.

From: ac082@FreeNet.Carleton.CA
Message-ID: <5imjas$5nl@freenet-news.carleton.ca>
Source record: 121235

I"ve got a Hallicrafters sx-71 with original manual. This unit is fully operational with only a few paint chips... serial number 104. I bought it from a former ham who used it with the DX100. Also have a Heathkit SB101 with power supply from the same ham along with various other components.

Also have GE Tube-type stereo amp, also operational.

As well I have an antique Astatic Ham Mike with stand.

I've used the SX-71 for occasional swl listening the other gear has been unused since I bought it and requires a good cleaning. All units have complete tubes and I"ve haven't attempted any repairs or modifications. The Ham I bought it from said it was operation when he removed it from service.

Anyone want to make an offer?

Shipping UPS Collect

: Offers will be finalized next week.

: Larry Wolken N3OJD
: (202) 291-9303

Reminds me of a time when a friend and I set up at a flea market. Just for fun, he put a sign on his car (a 1974 Pinto) which read:

For Sale
$8000.00 + T.O.P.

Mostly, people just looked at it and shook their head. However, he figured if someone were willing to take him up on the offer...:)

I wonder how he figures the remaining population of SX-88s? I thought they were a relatively common radio. (Makes me wonder how many S-20-Rs and SX-42s are left? Seems I've seen more than a hundred of each online...)

But...if he gets his price, more power to him.

:)

Jerry

2968. Trade TNC, QRP rig for boatanchors

Newsgroup: rec.radio.amateur.boatanchors

From: dhall@jps.com
Message-ID: <334f1054.13081301@news.ipass.net>
Source record: 121238

Hi folks,
I've got the following items to swap for boatanchors:

1. Kantronics KPC-3 TNC, like new

2. A&A Engineering 30m QRP transceiver (nice little rig, great for portable operation, VFO, superhet rx, xtal filter, very low current drain on receive, 5w out)

3. HAL P38 DSP modem for RTTY/AMTOR/Pactor/Clover, like new

Looking for a Hallicrafters, Hammarlund, or National receiver, ham band or general coverage, or Heath, Johnson or Hallicrafters transmitter. Also looking for tube type electronic T/R switches from Johnson or Dow-Key. If you have any interest in any of the items listed above and have anything interesting to swap, drop me a note via email.

I have a Hallicrafters HT-37 transmitter for sale. Condition is as follows:

Works but with external homebrew power supply (original PS xfmr removed). Some knobs on the front replaced with RS units. Inside dusty. Case needs paint. Front panel good.

Could be a parts unit but could also be gotten back to original condition by a bit of dedication.

Paid $75 for it to get a fellow ham out of a jam. Looking for $45 plus packing and shipping. (Could meet you at Belton if you're a Texas ham.)

Thanks....Rick nexus15@flash.net

I have a friend here in Winnipeg who has a mint SX-88 that is just gorgeous. He has been told by Hallicrafters experts in the USA that it is worth at least $3000. It is the most impressive tube-type receiver that I have ever seen and used - by far.

In my opinion the price of something is between the buyer and the seller....

In dealing with older collectible items there are three important factors: condition, condition and condition.

Good luck Larry with your SX-88. I hope you find a happy grateful buyer.

2977. Halli S-51 Rcvr, Strip Chart Recorders

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-13 00:00:00 UTC
From: Jes Logan <iffo447@ccwf.cc.utexas.edu>
Message-ID: <33518737.24C0@ccwf.cc.utexas.edu>
Source record: 121097

I would very much appreciate a manual for a Hallicrafters S-51 receiver and manuals for two strip-chart recorders. One is a Hewlett-Packard Model 7128A and the other is a Heath Model SR-206. Both are dual-pen recorders that I use to make radio astronomy observations.

I need to align the S-51 and at least those instructions would be great. I need to change the paper and ink in the strip-chart recorders and that specific information would be great too. The complete manuals would be icing on the cake.

I will pay copy costs and a fee. If you have the alignment or paper/ink change information, maybe you could fax it? My fax numbers are 512 331-0277 and 512 322-6221. My 'other'Email address is "logan@electric.aus.tx.us". My address is 13242 Kerrville Folkway, Austin, Texas 78729.

Here's hoping,

Bob Logan, NZ5A

Jeese! Why don't we END this thread! If some moron has $5000 to spend
for an SX-88, let him spend it! He is either grossly stupid or has money
to burn! No "user" of BA's is gonna offer that kind of price!
I'd LOVE an SX-88, but not at $1900! Some people are willing to
pay $1000 or more for a Super-Bowl ticket! NOT ME! NO WAY!
73,

Cross-posted to: rec.radio.swap,rec.antiques.radio+phono,rec.antiques.marketplace,rec.radio.amateur.boatanchors

Dear Friends,

I have for sale an antique multi-meter

This is an unused multimeter manufactured by Superior Instrument Co. It's model 1553 and comes in an oak box. It also has a vinyl carrying case and two test leads. There is a key for the carrying case. An instruction card is included in the carrying case.

I can't find a date on it anywhere but I would guess it is late 1940s. However, I'm not knowledgeable about these things and I'm just guessing based on the appearance of the Operating Instructions card and the fact that the meter is in a wooden box (I think it's oak).

I bought the meter several years ago from someone who had about a dozen of them that he said were new-old-stock. From the appearance of this item, I'd believe him. It's mint. There is one small scratch 1/8" long near one of the front panel screws. I would guess it was made by the assembler who who built the thing. The approximate dimensions of the case are 6.25 high x 4.25 wide x 2.5 deep. The meter (including bezel) is about 3.25" in diameter.

I'd like to get $40.00 + shipping or will trade for telegraph equipment (hand keys, speed-keys such as Vibroplex, etc.)

Thank You!

Derek Cohn

Yves,

I bought my copy through Antique Radio Classified
http://www.antiqueradio.com/ for $29.95 + s&h. They also list several
other excellent books on radio equipment. In fact, I also purchased books
on Heathkit, Collins and the Zenith Trans-Oceanic for a Christmas gift.

Good hunting.

2983. Help ID a National receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-13 00:00:00 UTC
From: DENNIS AND CONNIE BAKER <wbfim@sound.net>
Message-ID: <335106CC.7D14@sound.net>
Source record: 121103

My poor National receiver still has not gained it's identity. Upon further examining I have found out the following tube line up:

6K7 RF
6J7 MIXER
6J5 OSC
6J7 MIXER ??
6F8 XTAL OSC + ??
6J7 ?
6K7 IF
6K7 IF
6J7 ??
6H6 DECT
6V6 AUDIO AMP
80 REC

The following is the controls:

TONE
OFF-B+ OFF-REC
AUDIO GAIN
BAND SWITCH
bands .2-.4, 1.3-2.8, 2.7-6.4, 5.9-14.4, 13.5-30.0 Mcs
TUNE
RF GAIN
C.O.N.S. OFF-ON
TUNEABLE-XTAL
CW OSC
AVC-MVC-CW

This is a rack mounted receiver and has a military look to it.

If you could give me some hints as to it's identy, I would be greatfull

Thank you

Dennis KE0QM

I don't have time to dig out the schematic but I had ARC-5 rigs on during
the 1950's. Yes, you can rewire for 12VAC heaters. A 200-250 VDC supply
can supply the 1626 and eye tube plates and the final screen girds. About
500-750 for the final plates. Email me directly if you need more
information. I have a marked up schematic around here somewhere with
notes on conversion. 73,Dick Wilder, K3DI wilder@clark.net

The older ARRL Handbooks had step-by-step conversion instructions and circuits for power supplies. At least my 1963 edition does.

You're gonna have to hack it up to use it on the ham bands, tho. If it's NIB it might be better to keep it the way it is as a collectible, although they really aren't all that rare. In my opinion, they're not that great a transmitter anyway. And yes, I used one, modified per the info in the 1963 handbook. Built the power supply from an old TV. Make sure you use a good lowpass filter with it...

3009. Hallicrafters SX-101A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-13 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <5irkr7$rum@news.Hawaii.Edu>
Source record: 121195
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I am being given an SX-101A. It is really a beautiful receiver - first time I ever saw one in real life! (Only licensed since '76.) But alas, I'm afraid it will sink the little sailboat I live on so I must offer it up for sale. (Besides, I'm more of a hybrid ham - solid state rcvrs and tube transmitters.)

I honestly have absolutely no idea what my asking price should be. Is there a Hallicrafter's blue-book that could aid me in determining a fair price?

I also have the external speaker and manual.

Thank-you in advance,
Jeff KH2PZ

3010. WTB: Heathkit knobs and Manuals

Newsgroup: rec.radio.amateur.boatanchors

I need some knobs for the Heathkit HR-10, HW-16 series radios.
Specificaly I need the AF-Gain, RF-Gain, etc size knobs. I need 2,
but will take what ever you have.

I also need an original manual for the HR-10 Receiver (will take an
HR-10B), and HG-10B VFO. I already have copies, so I am just looking
for originals if available.

Thanks and 73's

David

Hell, Mike! I can't envision why _any_ Hallicrafter receiver could command such a prohibitive price ($1900 +++). It may be just the collector/rare stock mentality. 'Sorta like the stock market ..chasing hot issues. They, too, get riduculous!

Bob, here's how:

You send an e-mail to:

LISTSERV@LISTSERV.TEMPE.GOV

No subject, and the text:

subscribe boatanchors FIRST m.i. LASTNAME

Be sure to use your FIRST NAME, then Middle Initial then LAST NAME.
For some reason it likes that!

The list is FREE forever! Enjoy!

Bry

3021. FS: Kenwood TS-520/S/SE power transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-14 00:00:00 UTC
From: k5dh@dlep1.itg.ti.com
Message-ID: <5ita4k$68j@sf18.dseg.ti.com>
Source record: 121115
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

For Sale:

Used power transformer for Kenwood TS-520/S/SE transceiver.

I bought it from a Kenwood service center in Dallas, but it turned out
that I didn't need it after all. It's in clean, in good shape, and is
ready to install in your rig.

This would also be a great transformer for a p/s for your homebrew
200 Watt class transmitter! The high B+, when voltage-doubled with
100 uF over 100 uF, is 950 VDC (no load). There are also low B+
windings that give about 300 VDC, 200 VDC, 100 VDC, and a negative
bias supply. Filament supply is 12.6 VAC. Primary is 115/230 VAC.
It was designed to power a 12BY7A and two 6146s, plus the 12 VDC
of the rest of the transceiver.

It may also work in the TS-820/S but I'm not sure about this.

Price is $60 (exactly what I paid for it) plus shipping from 762xx.
I'm told that brand new ones are $125 each (if still available).

Email me if you're interested in this nice transformer.

73,
Dean K5DH

Undoubtedly you already have the the "amvhf.zip' file which includes mod notes and somewhat fuzzy gifs:

http://ns1.qsl.net/ka0nno/

Also, I believe KT2B published various conversion notes in his Above and Beyond column in '73 mag sometime around 12-85 to 3-86.... Good Luck w/ your project!

An E. H. Scott RCH followed me home from the last hamfest I went to. It has a very impressive build quality. Works, even--WWV (10 mHz) on a 3-ft piece of wire. It has had some hacking done on it and I'd like to put it completely right. If you have any info on this nice old radio I'd appreciate getting a copy.

A friend of mine who doesn't have access to the Internet recently bought a Collins KWM-2. The 516F-2 power supply that came with it has a defective 8 Hy L-2 filter choke in the LV section. I told him that I would post a question here for him.

Does anyone know of a source for a used/new replacement choke? Is there anyone in the business of rewinding transformers and/or chokes?

Yes,

Peter Dahl in El Paso sells new transformers and chokes for many older equipment. I have not purchased a filter choke from them but understand that they are as good or better than original. Don't
have address or telephone #, but they have a website now and you can search them out.

Source record: 121056

FYI - SX-88 was a 535 KC to 33.3 MC 6 band reciever. 6 position bandwidth control. It's claim to fame was that it was part of the Clipperton expedition back in '54.

Price of the '88 was $595 back in 1955. Never sold many of them because the S-85,86 ($119.95), SX-96 ($249.95) and SX-99 ($149.95) followed the same styling and had many of the same circuit features.

The SX-88 had two different production runs. The only external difference was in the band selection knobs. One is a round "T" knob (rare) and the other is a metal lever made out of chromed pot metal (common).

Also, see the WZ1V / N.E.W.S. VHF+ page for extensive modification info for the
AM6154/6155 amp for 144, 220 or 432 mhz. These are 1 tube 8930 amps that
were originally rated at 50W class A air band service. Running in AB1 they
will deliver 400W or so with a few watts drive. And they are *LINEAR*, unlike
most of the transistor amps in use today. The conversion is *EASY*.
The hardest part is finding the Hubbell twist-lock power connector.
I have a folder of info if you can't find what you need elsewhere.

3062. Lafayette radio needs a new home...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-15 00:00:00 UTC
From: lrware@pipeline.com
Message-ID: <5iukb5$pkl@camel2.mindspring.com>
Source record: 121143

Afternoon folks,
Whilst wandering through my junk I stumbled across yet another old radio thats got to go... I had planned to get rid of this some time ago, but... So todays junk is... Errr, make that "Todays piece of Wonderful Collectable, Vintage Lafayette Radio Electronics at its Finest!"

This one is a Lafayette KT-340, 8 firebottles and a Q multiplier. Has band spread, is a nice 60's general coverage radio. .55 to 30 Mhz in four bands.

The good news: Unit is complete with all tested good mostly new firebottles, correct knobs etc. Well built, whoever wired it was a good hand with a soldering gun. No mods... and I will provide a photocopy of the manual with it.

The bad news: Lettering has come off about 20% of the sliderule type glass on the front. Unit *Barely* works, can only here the local AM BC powerhouse, and I don't have time to fix it.

Overall I would call it about a 6 out of 10, good candidate for restoration by someone with more time than I.

Alas, I have more than it's worth in this poor old thing.
Cost me $30, plus the new tubes.

I could offer this up to high bid, (that might not be much... :-) But I have instead decided that it's time for a slightly different version of one of my contests... So "The Rules:"

1) Make me an offer that includes you paying the shipping.
2) Throw in the best joke or story you have heard lately.
3) Tell me why you need/want it, points awarded for:
a) Owning matching equipment already.
b) Needing it to complete an "All Lafayette" station.
c) It's for someone your "Elmer-ing."
d) It was your *first* radio, and you have been looking for another since your mom/dad/wife/space aliens tossed/ate yours years ago.
If you fit this one, see "e" below...
e) *Making up an outrageous story of what you will use it for. :-)
* For item "e" the taller and more unbelievable the better...

How funny I consider the joke or story, and why you want the radio it will determine most of the *value* of your bid.
Stories about Nipper, Radio Control, Secret Societies, or how the Secret Societies used VLF radio control on Nipper, are always good for extra points.

Bonus points to anyone who has sent me a manual, helped
me find a part, or provided advice, (good or bad, it's the effort that
counts. :-) or sold me something at a reasonable price.

Anyone willing to take it as partial trade towards a National NC-100
or variant is an automatic winner this round.

Winners will be determined any darn way I feel like.
Judges decision is final.

From: earlve3ab@igs.net
Message-ID: <5j1a6qnge1@nntp.igs.net>
Source record: 121062

I had several inquiries from my last posting entitled "Collins Mother of All Boatanchors" but when I tried to get the fellows to give me a price range of what it might be worth I had no response. Anyways its still available and I have a poloroid photo of it. I looked under the cover and everything is in order. the 813 and other tubes are there and the coils and big variable as well as the other mechanical parts so what say?? Is the darn thing worth a pinch of you know what? If youre really interested give me a price range of pristine condx to junker condx..this one is probably average/slightly above. 73 es happy boating ..earl ve3ab

From: pafroehl@facstaff.wisc.edu
Message-ID: <5j2dk9$qeo@news.doit.wisc.edu>
Source record: 121074

The main difference seems to be in the layout of the RF section, in particular the arrangement of the trimmers and slug-tuned coils. I have an SX-28 manual which shows the arrangement of these parts and my radio differs somewhat. (I think I have an SX-28A although my front panel says SX-28. Some sets actually identified the radio as a SX-28A on the front panel). Another variation, according to the Dachis book, is the inclusion of a fuse on the back apron of the chassis, apparently only with later production, presumably the SX-28A.

3088. H.V. Transformers for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-16 00:00:00 UTC
From: worley@ns.awanet.com
Message-ID: <861215958.29722@dejanews.com>
Source record: 121082

I have at least 50 HV current or voltage sensing transformers. They measure 5" x 6" x 7" tall with two 3" long porcelain feedthru insulators sticking out opposite sides. Also has a 4-terminal barrier strip on top. I de-potted one of them using a small heat gun but only found three small toroids, a diode bridge and small cap. and lots of glass marbles and resin. The case itself is 1/8" thick solid aluminum plate with a 1/16" thick gray rubber coating on inside and out (the top is removable) and may be useful for housing your own HV project if you can economically de-pot the inside. The feedthrus have 1/4"-20 x 5" long long solid copper threaded studs with brass nuts on each end. Unit weighs 16 lbs. Asking $10 each or 5/$40 plus shipping from S.E. Alabama. Email or call 334-347-5281.

From: Jim <jstrohm@taxes.net>
Message-ID: <3354C5F7.1C13@taxes.net>
Source record: 121085

I've seen clean ART-13s go begging at $5. each at swapfests
where Collins AND boatanchor collectors were present.

It's kind of a "where-is, as-is" buyer's market, apparently.
I'd certainly like to have a WORKING restored or original ART-13,
and I'd certainly nab a $5. ART-13 today (in any complete condition),
but I can't speak for the value of one now. Perhaps survivors of Dayton
'97 will have some input.

Jim N6OTQ (in 5-land)

P.S. I will pay UPS ground shipping on your ART-13 if you box it up
and throw it at me.

Source record: 120996

Hello, fellow HF operators!

This Saturday, April 19 1997, several World wide stations will be operating International Marconi Day. This special event is here to celebrate the birth of Marconi, the father of radio. The event starts on 0000 GMT April 19, and runs through the 24 hour period ending on 2359 GMT April 20. QSL cards will be sent to those who make contact with the stations signing /IMD, and certificates will be sent to those who make many QSOs with IMD stations. This event will start on Friday night local for North American stations, and run through Saturday.

The frequencies will be 7037 KHz and 10121 KHz for W6KB/IMD. This station will be transmitting from Bolinas, California with a 1959 Collins 30K-5 running 300 watts output on 40, and 200 on 30. The transmitting antenna will be a 6 MHz dipole 80 feet above the coastal cliff. The cliff itself is 150 feet above the Pacific Ocean. For receiving, we will be 17 miles north of Bolinas, in Point Reyes, California. We will key the transmitter remotely for perfect QSK. The site at Point Reyes employs multiple top-notch commercial grade WJ receivers and many directive antennas pointing in a multitude of directions. An identical site will be on the East coast, in Cape Cod, Massachusetts. We will control the East Coast site also via remote control, thanks to T1 lines. This affords us complete reception of all signals.

Because of this, all stations are welcome. DX stations and QRPpppp operators, this may be your golden opportunity! Last year, one of our operators worked a ham in Colorado running 250 mW from a 49er Transceiver. All QSOs welcome.

Thanks for reading our announcement, and we hope to hear you out there on our frequencies.

Adam Mclaughlin, KD6POC@jps.net

Source record: 120998

Hello, I have never posted to "boatanchors" before my last post so maybe I've done something wrong. (I haven't seen a response to my prior post) I am searching for information about a Hallicrafters SX28-A. I am trying to locate a service/operators manual and the pin-out of the speaker plug. Additionally, I would like to locate the correct speaker for this receiver. Probably, the reason I haven't received a response is that this is not considered an exceptional receiver, by the "group".

Any information would be greatly appreciated...

A.B.

You have a fine boatanchor there. Part of the Navy's WWII series of shipboard Super Low Radiation (SLR) series of receivers. They were designed to emitt almost nil in oscillator and splurious radiation so that German tracker trawlers and U-Boats couldn't zero in on our ships.

The last address I had for a source of manuals is:

E.H. Scott Historical Society
3712 North Broadway #4450
Chicago, IL 60613

Hope this helps.

mit-

I didn't see any claim that Marconi was the inventor of radio in the post you reference. I'm just curious as to who the mother of radio was.

Besides, we all know Loomis invented radio! Or was it Maxwell?

And speaking of radio,

I've an HT37 that needs to go $100
Microtel WR250B (not tube but has a mechanical scanner :-) $200
also a Siltronix 10/11C, SB200 combo for 10m $450
Consider EFJ Navigator, Geloso 'stuff', 51J4 in trade.
all plus crate and freight from 30306

> pass on it? Relax and enjoy life.

No, it isn't "enuf"... the "collector" mentality continues to take a lot of decent (and what could be affordable) equipment and places it out of reach of the average hobbyist who does not have a Lexus to pawn in order to raise the necessary funds.

If the equipment finds a good home, and there is someone who intends to keep the unit and use it, fine -- I suppose that if you are attached to a particular piece of gear and you just *have* to have it, then the price is going to get paid. That's just supply and demand, and I have no problem with that. But the practice of blind auctioning reduces the sale to the law of the jungle, where people panic and put up ridiculous amounts of money just to be the one who gets it. Then when they decide that they no longer want the gear down the road, automatically they remember the ridiculous price that they paid and feel that _they_ have to make a similar profit on its sale, and it just goes on from there.

And we're all going to die anyway, and we can't take it with us, so what's the point?

Look at what some people are paying now for Catalin plastic radios from the 1940s. These are simply five-tube superhet AM receivers. Prices in the $1,000.00s??? Do the radios ever even get switched on?

And you ham operators: do you really think that you are doing the hobby any good by making second-hand gear as unaffordable as the brand new appliances? Do you think that that is of any help at all to the dwindling number of folks who decide to pursue amateur radio as a hobby? What a great slogan: "Shut up and learn the code -- and while you're at it, get out your wallet"...

What's next, "collectible" Sprague TVLU filter capacitors? They're starting to get scarce now, too...

The "make money" attitude is the killer of all hobbies.

Okay -- now it's "enuf", and I'll shut up. Now where did I put that bottle of Prozac...?

C.K.

For Sale: E.F. Johnson Viking Ranger II

This unit is really excellent inside and out. On a 0-10 scale a 9.5.. I have never seen one as near new looking as this one. I am the second owner of this rig and the original owner hardly every used it. I bought it at his estate sale. The only reason that I am selling it is that I doubt that I would ever use it, as I use other transmitters on AM and it is taking up precious space in the shack.

If you want a really nice one, grab this one. Comes with original manual. This one is worth the $350 that I am asking. Shipping is extra from Fremont, CA 94539.

FLEA all SUMMER at MIT
April 20th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

A discount sellers SEASON PASS is available for
$50 per space if purchased by April 20th.

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

From rlandman@ix.netcom.com Thu Apr 17 08:19:08 1997
Date: Thu, 17 Apr 1997 08:34:10 -0500 (CDT)
From: rlandman@ix.netcom.com
To: nwqrp@scn.org
Subject: DXing

Hi Brian!

Well, I think I have a find (or a way to kill a lot of time):

Last night I was over at the Voc school (I'm now an advisor to the electronics class) and the teacher (Paul) wants to clean house a bit. I spotted a Hammarlund HQ-170A (vacuum tube type rcvr that covers 1.8MHz - 54 MHz) and asked if I could have it and he said, sure so I lugged it home.

I just fired it up this morning (once I found a fuse cap and some knobs). The dials light up and the S-meter even moves (it has a clock on it to automatically turn it on so you don't miss
your favorite station, hah!). Plugging in an old set of earphones, all I get is a bit of crackle which moves in sync to the S-meter. Also turned on my old RF signal generator and dicovered that this thing is not working (no big surprise - that's why it was donated to the school, no doubt). Have B+ and all tubes seem to have ok filaments (they light up or are warm to the touch). Interesting item is that two of the tubes in the tuning circuit have their filaments kept on even when the power is off (some

kind of stabilization circuit - osc??).

At least no capacitors blew up and I don't see any charred parts or obvious signs of a failed part. So, I will need a schematic diagram to go any farther. Wonder if anyone in your Ham
group would have an instruction book I could have a copy of? Any suggestions as to how to go about finding one?

This should make for some interesting troubleshooting. I haven't tried to fix a radio in, hmm, let's see, 30+ years? I need to brush up on my radio theory anyhow (blow out the cobwebs) so
this seems to be a practical way to do it. I have a ton of old tubes and if it is one of them. hopefully I have what I need. I think Paul may have a tube checker (and if so I'll try to get that too). When I retire, I'd like to fix up a few old radios (like the one in the livio\ng room) to fool around with. Maybe I can help Paul and teach a bit of radio (tubes are easier to understand, I think, than transistors, when you are starting out - Prof Paul Nalin at UNH agrees and wrote a book titles "The Scien

ce of Radio" and its based on tubes for that reason (I've got it an have been reading it - antennas are very confusing to me - how radio waves propagate away from the antenna, weird stuff!).

Nicola Tesla was the Uncle of radio!
I have always considered Maxwell and Hertz (formerly know as Mr. Cycles per Second) to be its parents. Of course, then there was Fessenden (spelling?).

3129. R390 History????

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-17 00:00:00 UTC
From: d888888@juno.com
Message-ID: <4107cd$13b12.170@news.pclink.com>
Source record: 121093

Hello,

I'm curious about the history and development of the Collins R390 and R390A. Are there any lurkers out there who were involved in the development of these? Is there anyone else knowledgable about the development of these wonderful radios, and that would take time to share their knowledge.

How about anyone who used and serviced these radio while in the Service or perhaps while working at an embassy?

How about publications on these manuals, other than the TM? Any magazine articles from the past?

Come on guys, there must be historically knowledgable people out there somewhere.

Any and all information and leads will be appreciated!!!

Tnx,

Bob

There is considerable info available. Several articles have appeared in
Electric Radio on the R390, the R390A, and some other interesting
variants.

There is also a pretty complete Contract/Ser. list posted in the
archives of the boatanchors mailing list (the one at sco.theporch.com.)

If it's the same mechanism as on the SB-102, the manual covers this adjustment as part of the assembly instructions. Basically, you remove the two set screws
in the knob and remove it, loosen the shaft's nut, slide the shaft assembly
toward the dial for more friction, and reassemble.

If you started this proceedure with the radio zero beat on the 100 KHz marker,
as you retiten the dial shaft nut, make sure the radio stays zero beat, and the dial still indicates the 100 KHz setting. This is not critical, just ballpark so the dial can be zero'ed with the adjustment.

Hope that helps.

> Good and bad features?

Only thing that I can offer here is that Electric Radio once posted
an improvement that could be made to the SSB/CW reception of this
receiver. Was an issue from around 1992-93 or thereabouts.

I *think* that the modification essentially brought the '300 up to spec
with the subsequent NC-303, but I'm not absolutely sure.

If the payment is in some sort of documented form (i.e. postal
money order, personal check), you could ultimately go after the
seller for mail fraud if the merchandise never gets delivered.
I've read stories about guys contacting the local police in the
vicinity of the seller and asking that they pay them a visit...

I've been fortunate so far in that no one has ever fleeced me
on a sale... though the condition of more than one purchased
item has been exaggerated (read: lied about) by the seller...

I have a supply that has Bias adjustment and I need to know how this needs
to be setup during tune up as far as the cathode grid current goes?
What is the actuall Rf out supposed to be as the manual is confusing?
Is this a 125 watt Rf-out or 400watt tuned input?
I,m using Swr meter set in forward for max out.What should the Mili-amps
read ruffly if the tubes are good a set?

Any info on this Hombrew supply and Radio would be greatly appreciated!
Thanks!

I'm interested in acquiring a decent 6M rig, preferably something with tubes, like a TR-6 or Swan 250 or SB-110 or ????. Or a nice xverter to go with my Drake B twins or KWM-2. Something in the 50-150 watt range. I don't have a huge budget, so a 62S-1 is probably not an option, but let me know what you have.

Hi Mates,

I sold one of my ART13s W/O 811s and 813, complete otherwise
for 125 bux, but I was so slow in getting it shipped I scrounged up
a set of 811s and an 813 and shipped them to the fellow to make
up for the two week delay. I have a second one that a fellow is
going to pick up first part of May. It has a broken TR switch (glass
part uhg!), a missing big knob, no 811s or 813, complete otherwise and
it went for 60-65 bux. Hope this helps as to my experience in
pricing these gems. But what do I know about Hamonomics these days?

Adios es 73

Bob, KE6F

3154. WTB FT243 crystals

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-18 00:00:00 UTC
From: caseyx@ssd.intel.com
Message-ID: <5j6e30$ab8@news.co.intel.com>
Source record: 121032
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Specifically, I'm looking for crystals in the CW-only subbands
for 80, 40, 20, and 15 meters. Alternatively, if you know where
to get adaptors for an FT243 socket that would allow me to use
more readily available crystals, let me know.

Tnx es 73,

Casey

Despite the high price these days of SX-88's, there are literally tons of great, readily available, inexpensive, vintage radios. Clean SX-101's go for $100 and up at most hamfests. Get a nice old DX-60 for less than $100, and you have the makings of a fine classic station. Other good bets are Drake rigs (especially the 2B), almost anything Heath, HQ-110's and 170's, NC-303's, etc. My list, barely scratches the surface.

I own about fifty sets, and have rarely paid more than $200 a unit. Both buyer and seller were very happy with their transctions. Using any of this equipment is great fun! Just because you don't have the dough for a Ferrari, doesn't mean that you can't own a car. On the other hand, it doesn't benefit your mental health to resent the folks who can afford the finer things in life. BE HAPPY!

3156. NC300 Information

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-18 00:00:00 UTC
From: Marc Hildebrant <hildebrantfamily@worldnet.att.net>
Message-ID: <01bc4ba5$7503c680$77ca92cf@newmicronpc>

I recently obtained a National NC300. I tried out the radio, and it seems to be as good as my Drake 4A. Anyone have any experiences with this radio? Good and bad features?

Thanks,
Marc

3157. FS: Vintage Vibroplexes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-18 00:00:00 UTC
From: Randy Cole <cole@netcom.com>
Message-ID: <3356F4AB.5AFE@netcom.com>
Source record: 121035

Once again, I have a few Vibroplexes to match that rig you just restored and put on the air.

In addition to a few boatanchors, I collect Vibroplexes and other bugs. In the process of acquiring bugs for my collection, I wind up with duplicates, and I have the following bugs for sale, all in good working order:

Champion #152056 (1946): 833 Broadway, plate D6, black crackle base. Overall condition is very good. A few chips on base which have been neatly touched up with flat black. $85

Original Standard #152407 (1946): 833 Broadway, plate D6, black crackle base. Overall condition is very good to excellent. A few thin spots on base, which have been neatly touched up with flat black. Strangely enough, these black crackle standard Originals are not too common. $85

Blue Racer #183133 (1953): 833 Broadway, plate D6, gray textured base. Overall condition excellent. When received, base had been repainted and paint was in poor condition. Base has been stripped and refinished with medium gray textured powder coat. Powder coat is the same tough finish now used for new Vibroplexes. $225

Original Deluxe #262123 (1969): 833 Broadway, plate D6. Chrome base w/red plastic pieces. Mint condition, like new. With case, also in mint condition, cord and wedge. Like most Vibroplexes of that vintage, has no circuit closer. $150

Lionel J-36 (WW2): No nameplate, WW2 vintage. Black crackle base paint in good shape except in area where nameplate wash, Some missing paint on the rear edge. This bug has the dark nickel plating. Overall condition is very good. $85

Prices are firm, shipping is not included. Satisfaction is guaranteed -- return within two weeks for a refund if you re not happy.

73,
Randy Cole

3158. HW-101 Jackson Drive

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-18 00:00:00 UTC
From: John Lockhart <jlockj@minn.net>
Message-ID: <01bc4b9d$123d7ee0$477cc6cd@default>
Source record: 121036

Anyone know how I can get the Jackson drive for the VFO
in my HW-101 to stop slipping? At some portions of the dial
it works pretty well, but at others turning the tuning knob does
nothing unless I "load" the drive by pushing or pulling the knob
as I turn it.

Thanks,

John W0DC

There is a new LISTSERV e-mail list for BOATANCHORS enthusiasts that I just discovered! The best part is that it is FREE!!
To subscribe, send an e-mail message to:

LISTSERV@LISTSERV.TEMPE.GOV

with no subject, and the text:

subscribe boatanchors <Your Full Name>

The only odd thing is that it wants you to send you name with a middle initial otherwise it rejects the subscription.

For example, I had to send:

subscribe boatanchors Brian J. Carling

See you there!

A lot of newcomers may or may not know this. Hell, they may not know
hat a FAQ is, or where to look. The title of the group should be
rec.radio.amateur.equipment.discussion or something similar. If you
were new, and saw the title as it is now, wouldn't you think this is
the place to sell equipment? Also some servers may or may not access
all the groups.

On the subject of "noise level", some would think that the HRO and cat
pee threads, as well as old what's his name the teacher (Who
thankfully has been absent of late) might well be considered noise
level by many.

It would be a simple matter to set up a killfile for any ads
containing "FS, WTB",. etc.

Well, yes and no. I wants three elements after the list name. I sent it:

subscribe boatanchors Dick Flanagan W6OLD

and it was quite happy! :)

rec.radio.amateur.swap has been around for well over a year now.
Sounds like your ISP is falling down on the job of getting new groups
added.

Marty, what is getting bad? Is the equipment getting bad and hams want
to sell it? Is the introduction of new radios getting so bad that hams
have to sell their 4-month old "state-of-the-art" stuff to buy this
weeks Yae-com-wood intruduction? Maybe we should just buy radios and
not sell them - like guns, you can never have too many!
I would rather see folks selling stuff than the inane "whats the mod (so
I can transmit on COP frequencies or listen to cellular phones) posts?
And let us not forget the "Teddy Bear" posts that just wouldn't stop.
So, gosh, someone is trying to sell a radio. Should we also be
concerned that others are trying to find or buy, as in WTD and WTB,
radios as well?
I'll probably feel a little guilty for responding to this, but sometimes
you feel like a nut...

In spite of your personal preferences, the various rec.radio.* newsgroup
charters specify that the WTB and FS ads are supposed to go into
rec.radio.swap. It helps to keep the noise level down.

<rogo@ziplink.net> wrote: Can anyone advise as to the current
>market value on a BC-348J (110v) and external spkr?

A good, complete BC-348 in *UNMODIFIED, UNHAMMED*
condition is worth $100-$125 easily. Especially if the
dynamotor is present.

One hacked, hammed, chopped and modified for a 110VAC supply
is worth about $25-$30 *if* it hasn't had any holes drilled
in it, and is next to worthless if it has. I personally wouldn't
pay anything for a "hammed" one unless I needed spare parts to
fix an original.

Unless the "external speaker" is an unmodified LS-3,
it's worthless in the context of this set.

Best of luck,
David Stinson AB5S

Presumably you mean "moving van". The answer is there with careful blanket wrapping of each item, in some cases multiple blankets. There is one caveat: you must get a straight-through load (no transfers) to destination. This may be at premium cost if less than a full van. One other important point: get to know the actual driver a bit; discuss with him his travel plan.

Electronic trade show exhibitors use this method with great success. It's a necessity in many cases because no one can put up with hundreds of boxes and packaging materials at the receiving point!

Speaking from a vantage of many such experiences. <G>

Hi!
I once moved ham equipment, FT101E, SB220, Kenwood TL922 amplifier , antenna tuners etc, from Quebec City, Canada, to Ujung Pandang, Indonesia. Each piece of gear was put in a plywood box, wrapped with plastic sheets and surronded by mineral wool. All these boxes were securely fastened to the wooden container with our personal belongings. Everything travelled by ship and arrived safely..So it can be done!
Good luck
VE2ATD.

>folks who can afford the finer things in life. BE HAPPY!

But Alan, on the other hand there is only a LIMITED number of hams who
can afford to casually lay out $10,000 like you have for their
boatanchors!

This points out a growing problem in America - the great and growing
disparity between rich and poor. This is an alarming problem. It is
one of many factors that lead to the popularity of such groups as the
militias. Americans are becoming increasingly aware that life is
insane here. Work is often NOT rewarded, and the rich just keep
grabbing more of everything.

Including boatanchors, sad to say!

You can make those adapters by soldering bits and pieces together.

Also, N0ACS, John at Phoenix Crystals is gearing up to make some FT243
crystals very sooon if you would like to buy some.

I can give you the info if you are interested!

Edd Buttell writes;

Hello Earl:

The AN/ART-13 has been around since I was a teenager (a long time)
In the old radio surplus books it went for around $49.00 in "new"
condition (G&G Radio,NYC,in 1959) and that was wirh all the
accessories, VLF(low band)oscillator,crystal drawer,ect,ect. Now
Fair Radio Sales (Lima Ohio) sells them for around $150.00 in
"used" condition and no accessories. What is your "13" worth ???
It depends the condition,version,year and accessories if any.
The average price of used AN/ART-13 at hamfests in M.E. is $50.00
to $75.00.

I hope this can help you.
73's de Edd,B,

Hello Everyone,

I have added a couple of more titles to my list of HQ manuals:

R390A Operator's manual TM 11-5820-358-10

R389 Manual TM 11-855/TO 31R1-2URR-161

Hammarlund SP-600J/JX Operator's manual
Hammarlund HC-10 Converter manual
Hammarlund HQ-180 manual
Hammarlund HQ-180A manual
Hammarlund HQ-145A manual

Hallicrafters SX-101A manual
Hallicrafters SX-117 manual
Hallicrafters SX-115 manual
Hallicrafters HT-33B manual
Hallicrafters HT-37 manual
Hallicrafters SX-28 manual
Hallicrafters HA-5 VFO manual
Hallicrafters HA-1 Keyer manual

Schematics (laminated or plain) are also
available for the above equipment.

The materials and processes I use make these
the highest quality digital laser reprints available.

Please e-mail me for more information.

I am a relative newbie here... perhaps 3-8 weeks old... I have NEVER gotten the slightest idea ads (within the BA context) were not welcome... while I have read many threads of an informational nature, if truth be told, I come primarily to read the ads.

I'm not a dealer, just very interested in BAs. If they were verboten I would still come and read, but I would enjoy it a whole lot less.

Why not have a person responsible for contacting blatantly non-BA ads and show them the error of their ways... with the suggestion that they will be set for rejection should they post 3 in one year.

Ed Tanton N4XY n4xy@bellsouth.net

P.S. I AM a subscriber to the 'paid' BA reflector.

As Rich points out, the ads here are a violation of the non-*.swap
group charters.

I suppose that those who want the ads here could file the needed
actions to get the charter changed, but I doubt that will ever
happen... If they are too complacent to post in the appropriate
groups, it is doubtful that they will bother with the paperwork.

Just did a little checking of a number of the inappropriate WTB and
For Sale ads being posted...

Most are being cross-posted to rec.radio.swap and/or
rec.radio.amateur.swap as well as spamming them to the wrong groups.

Seems that the idea of the *.swap groups not being on someone's server
just don't hold water.

Hi!
I have a BC-779 (Hammarlund SP-210 Super Pro). they wer cheap in sweden a few years back! I have a project going, but building the original psu is quite large. Is it necessary to use all the high voltages, or is 150 and 250 V DC all that is required to operate it. I have seen some CQ articles from late 50's. They seem rather tendencious, giving details on modifications which may not be relevant. For ssb I would rather change the bfo valve to 6K8 or ECH35, then wiring need not be changed too much

Casey - best bet is to make your own adapters out of things like old
FT-241 holders that are plentiful, and a socket for the newer type of
rock you are going to use.

I have done this for two types and it worked well.

Problem is that the FS and WTB ads in the r.r.s group are SO NUMEROUS!

A few specialized ads in boatanchors for example, are VERY welcome by
the majority of readers.

We do not want to wade through 150 ads for dual band VHF/UHF whatsits
and packet terminals trying to find a DX-100!

Why not take this thread to r.r.a.policy?

Good morning ladies:

Attended a ham fest yesterday, first of the season, and acquired a Vibroplex Original, model D-3, serial no. 96,xxx. I date it about 1926 and it is as described on the Vibroplex url, black japanned finish with gold pinstripping. All original, all complete, with chips in the paint and with the exception that one paddle appears to be an old replacement. Several hams immediately appeared out of the wood work wanting to buy....any ball park estimate on possible value that could be attributed to this Vibroplex? Thanks in advance.

Source record: 120928

Just got a G.E.C. BRT402 receiver from 1961.
Great radio!
Interesting in that it solves the electrolytic capacitor problem by avoiding them completely. The power supply uses a "smoothing" tube, which feeds the hum back into the circuit but 180 degrees out phase!! Works, too!

Anyway, it has some strange tubes in it
N77
D63
N709
Z77
S130P
U52

They are metal "cans"...they look like crystal ovens, and have what appears to be loctal type sockets , but somehow different.

Is there a source for these tubes? How about subtitutes...hopefully without having to change the sockets.

BTW the radio is pictured in the back section of Fred Osterman's book.

For Sale,

Johnson Viking II transmitter.

Works great. "Factory wired" new audio driver transformer.

Not collector quality cosmetically. (has a 1/2" hole drilled above
the key jack on front panel.) I have it covered with a black plastic
hole plug. No other mods or damage. Typical nicks and scratches.
All knobs intact etc.

$100 pick-up near Milwaukee WI or you pay pack & ship
Original manual in excellent condition included

>>

My fault, I wasn't very clear. Most of the radios were purchased for a lot less than $200. Usually, I spend between $50-$100, a unit. My collecting started to get serious about seven years ago, so the outlay per year has been rather low. I think a lot of people will have more trouble finding the space to keep all those rigs, rather than finding the money. My wife is very patient with me.

>> This points out a growing problem in America - the great and growing

>> grabbing more of everything.
>>

Hey have you checked out Haiti or China lately? It was only after WWII that the gap between rich and poor really narrowed. The fact that most of Europe and Japan were in rubble helped make that possible. Having no competition can be very enjoyable. Our ecconomic conditions may not be as good as it was during the years my favorite radios were made, but I find them pretty acceptable. I have good friends, good food, a job that sometimes gets a little crazy, a fairly normal middle class life. More money would be nice, but that's always true. This isn't a political discussion group, but I would love to know, how having a citizen's militia run things would make it better!

Hi Cec - I'm reading your remark on r.r.a.boatanchors, and as I recall,
the charter for .boatanchors does allow for BA ads.

I wonder who the goofball was (M.A. maybe?) who originally included so
so many newsgroups? Neither .misc nor .homebrew have a problems with
lots of ads - only .equipment does, so followups should be directed
just to that group.

New in town, found these places (surplus shops) that have vacuum tubes:

Haltek Electronics, Mountian View. Linda Vista
Lots of random "receiving" tubes
for TV, radio, some with mil markings. almost all Buck a piece. They have a
tester they let you use. Some NIB, mostly used.

Halted Electronics, Sunnyvale. Lawrence and Central
Lots of random tubes, TV radio, mil
receiving tubes. Some NIB, mostly used. Tube checker you can use.
Prices 25% off some price list they have, tends to make compactrons
overpriced.

Alltronics, San Jose, Zanker Rd. They list their tubes in their catalog,
some NIB, NOS, and used. You ask for them over the counter. They have
a tube tester you can use. Informal guarentee, at least they replaced
the duds I bought there. Prices okay. Better odds of finding audio
tubes.

I have one KWM2A that is complete but real rough.Most would consider it a parts unit.It is a winged emblem and I have an old KWM1 mobile P.S.to go with it.I will take best offer.
I also have a V.F.O. unit for a 32V2.It is a 70E-8A and is new.I will take $75 plus shipping for that.

Thanks,

Robert Ramirez

Ed,

No SET needed!

From just about any Ham Handbook:

VSWR = 1+T/1-T ------------------
/ Power (Reflected)
where T is the reflection coefficient = / _____________
/ Power (Forward)
\/

In words T is the square-root of the ratio of reflected power to forward power as measured on your Micromatch. I'm sure you can find some tables or charts that do the above in different handbooks on Antennas or Ham Radio in General. When used on one transmitter it is not be long before you will get some idea as to what the reflected power levels are for specific SWR's, since the forward will remain relatively steady.

I hope this is what your looking for. The Micromatch manual would contain no more than what you have already studied in your Extra Class license preparation.

Since the MC Jones does have a pot on it to select the power ranges, you could use this as a sudo SET adjustment and make your own chart for SWR based on a fixed forward power of let say 10 Watts. When you transmit then adjust the pot to read 10 watts in the forward and then switch to reflected and read that wattage. From your chart determine the SWR. Since SWR just depends on the ratios actual power levels are not important. When you do want to see an actual power level then set the MC Jones to the marked power level positions.

Hi everybody!
I have seen some discussion about should we "tolerate" ads or not on this group...
I found last week a Johnson Viking Ranger II (I'm taking delivery tomorrow in Albany, NY) and a S40B (I expect it any day with UPS) through these ads on this newsgroup.
Was I wrong to post my WTB postings in this group?
What should I have talked about?

Got just what you need right on the WWW!

I have several 6L6 transmitter articles and schematics etc.
available at:

http://www.mnsinc.com/bry/hamfiles.htm

E-mail me and let me know how you are doing. I have several such
transmitters here and we also have an e-mail discussion group for
folks that like to build small tube transmitters.

It is called GLOWBUGS.

To subscribe, just send an E-mail to:

majordomo@www.atl.org

With NO SUBJECT, and the text:

subscribe glowbugs YOUR-E-MAIL-ADDRESS

==========

EVERYONE IS INVITED TO JOIN US!!

Then you just send your messages to the group to:

glowbugs@www.atl.org and they will all see it and
you will get a few messages a day that are interesting.
I have had a LOT of great help from this group!

I hope that helps!! Come on in, Carol!!

Bry, AF4K
To reply to this message, you MUST remove ".no.ads" from my address.
It is there to fool those annoying unsolicited e-mail advertising robots!

The following items for sale plus shipping. Call 2058801207 for more info

-Philco 71 chassis and speaker. Speaker needs reconing, chassis has two tubes and has one of 2 shields. Chassis looks complete. $30

-RCA crystal unit model xc-5-ks, freq = 100 kc $10

-Hewlet Packard Standing Wave Indicator. Nice condition, tube type $11

-Signal Corps WW2 vintage frequency meter TS-174B/U good condition $20

-Chrome plated power amp, uses no pc board, solid state, but uses point to point wiring, no maker name. Could be a jukebox amp. nice physical condition, untested $12

- Leeds and Northrup, Millivolt Potentiometer #8686 with paperwork, nice metal box $12

-EDC precision Voltage source $12

-TPC Logrithmic converter $12

- Tektronix rack mount for 160 or other series modules 18 inch $10

-Tektronix 161 pulse Generator $8 no tubes, good conditon and complete

-Tektronix 360 Indicator $20

-Small Realistic Stereo Amp and am-fm tuner, TM-101, SA-101 nice shape 20 dollars for the pair or sell separate. 12 dollars each

-Early Mechanical Watt meter , Singer Metrics model DLWEW-S $15

-Westinghouse Micro Ampmeter, large looks new,large with 340 degree movement model kx-241 $12

-Small Viscount Ac-Dc set, green and white, looks complete , 1 tube missing and case cracked, $10

The following tubes are used and checked,

-New in box 5axp4 picture tube $10 or best offer

-5933s $3 each

-RCA 6550 key broken, very little use $20

-Globe O1a, mostly RCAs $7 each

-RCA, tungsol 12ax7 $2.50 each

-5751s, 5963 GE 5 star and sylvania $3 each

-RCA 7199 $5 each

-Tungsol 5881 $5 each

-GE 5star 6087 $3

-Sylvania 6sn7WGTA New in Box $4

-Misc used 6sn7s $1 each

I don't have a problem with boatanchor related FS and WTB "classified" ads. At least it's talking about stuff revalent to the newsgroup, not spam ads.

I agree with that statement. We have a "sell-newsgroup" and everyone should use it. However, as there is a _lot_ of traffic in r.r.a.swap, how about splitting this group into a WBT and a FS part?

I just spent the entire weekend dismantling and reassembling the RF section of a Hallicrafters SX28.... replaced caps, resistors, cleaned the bandswitch, etc. What a job! Now I am ready to align this thing and I am not sure how to proceed. The RF and Osc sections feature slug tuned coils each coupled with a variable trimmer cap. The manual tells me which ones go with which bands, but says nothing about the order of alignment. The section that especially perplexes me is the Osc, since it seems that there are many combinations of the slug setting and the trimmer cap setting that will get you the same freq. Little old me, all I've ever seen in the past is a single trimmer!
Any ideas on how to proceed? Thank you...

Hi everyone... at the Birmingham Hamfest I found an excellent MC Jones Micromatch model MC 262 with the matching model MC 261 coupler. My question is this: if it is calibrated ONLY in watts, how can you set it in 'FORWARD'... I need a manual and the conversion sheet that surely comes with it to convert from its wattmeter scales to SWR. I would appreciate it very much if anyone has such and would send me a copy. Of course I would be happy to pay all costs and buy you a cup of your favorite coffee! Thanks.

Paul:
If you have the manual, it should describe the procedure in detail.

In general (and I should mention that I have never aligned an SX-28,
so take this with a grain of salt), the trimmer caps are adjusted
with the main tuning cap at its _high-frequency_ end (minimum
capacitance). The coil slugs are adjusted with the tuning cap
at its _low-frequency_ end (maximum capacitance). The trimmer and
coil slug are adjusted iteratively until there is no improvement.
It's important with most receivers to align the IF first so that
calibration and tracking are right.

: I have seen some discussion about should we "tolerate" ads or not on
: this group...

A year ago there was considerable discussion on this topic during the formation stage. The opinions were mixed. THe charter is attached and I will post separately with its own subject. In the charter I see that we specifically did not mention the swapping situation for this reason.

: I found last week a Johnson Viking Ranger II (I'm taking delivery
: tomorrow in Albany, NY) and a S40B (I expect it any day with UPS)
: through these ads on this newsgroup.

I am going to have to speak to George about that (hi !).

: Was I wrong to post my WTB postings in this group?

As you will see, there are mixed opinions on this. I, myself, would like to see ALL swap activity in the rec.radio.swap newsgroup. But maybe what we need to consider is a reorganization of rec.radio.amateur newsgroups to get the swapping separated from the discussions in all of the ham groups......

: What should I have talked about?

See charter below.

: VE2ATD

CHARTER: rec.radio.amateur.boatanchors

The newsgroup, rec.radio.amateur.boatanchors, is primarily for discussions of topics related to classic amateur radio gear. Participation by others who are not licensed radio amateurs are also welcome.

EQUIPMENT.
Appropriate equipment of the boatanchor category includes:
- equipment constructed primarily with vacuum tubes, not solid state devices, and manufactured generally in the post WW II-to-1970 timeframe.
- transmitters (amateur, military, home made)
- receivers (amateur, SWL, military, home made)
- station accessories (keys, bugs, microphones)
- test equipment from the boatanchor era used in the repair and restoration of boatanchors, such as scopes, af and rf generators, meters of all kinds, etc.)
- parts and techniques used in construction of boatanchors (vacuum tubes, condensers, etc.)

TOPICS.
Topics regarding the above equipment built entirely or primarily with vacuum tubes (as opposed to solid state devices) are welcomed in this newsgroup. Suitable boatanchor topics may include :
- collecting
- modifying
- tuning
- obtaining parts (specific requests for parts/equipment are permitted)
- manuals and TM (tech manuals) copies exchange
- restoration and refinishing
- values of boatanchor gear
- sources for parts
- questions and advice for others
- Morse Code operation - advice, legends and lore
- Modes of operation: CW, AM, early SSB
- manufacturing during the boatanchor era, including companies, personalities, and manufacturing techniques
- design and engineering history of equipment of the boatanchor era and comparisons to prior technology (arc- and spark-gap transmitters, Alexanderson alternators, galena detectors, magnetrons, Nixies, quartz crystals).
- other subjects of a historical nature
- commercial postings, if SPECIFICALLY offering products and services DIRECTLY relating to boatanchor collecting.

OFF CHARTER TOPICS.
The following subjects are off topic in this newsgroup:
- discussions of hi-fi, stereo, and/or broadcast receivers. (use rec.antiques.radio+phono and rec.audio.tubes newsgroups)
- antique equipment (use rec.antiques.radio+phono)
- entertainment television receivers
- cross postings from rec.radio.swap
- discussions that are more appropriately held in other rec.radio.amateur newsgroups, such as code vs no-code
- off-topic commercial postings are specifically prohibited from the newsgroup

FAQ.
- A list of Frequently Asked Questions will be developed by volunteers in the newsgroup and will be posted monthly. This FAQ will be helpful to beginers as well as first time visitors to the newsgroup. The FAQ will contain a list of commercial vendors who specialize in products and services of value to boatanchor collectors.

END CHARTER.

By popular demand here is the charter which was developed Sept. 96
by a few hundred boatanchor visionaries.

Rick K2XT

CHARTER: rec.radio.amateur.boatanchors

The newsgroup, rec.radio.amateur.boatanchors, is primarily for discussions
of topics related to classic amateur radio gear. Participation by others
who are not licensed radio amateurs are also welcome.

EQUIPMENT.
Appropriate equipment of the boatanchor category includes:
- equipment constructed primarily with vacuum tubes, not solid state
devices, and manufactured generally in the post WW II-to-1970 timeframe.
- transmitters (amateur, military, home made)
- receivers (amateur, SWL, military, home made)
- station accessories (keys, bugs, microphones)
- test equipment from the boatanchor era used in the repair and restoration
of boatanchors, such as scopes, af and rf generators, meters of all kinds,
etc.)
- parts and techniques used in construction of boatanchors (vacuum tubes,
condensers, etc.)

TOPICS.
Topics regarding the above equipment built entirely or primarily with vacuum
tubes (as opposed to solid state devices) are welcomed in this newsgroup.
Suitable boatanchor topics may include :
- collecting
- modifying
- tuning
- obtaining parts (specific requests for parts/equipment are permitted)
- manuals and TM (tech manuals) copies exchange
- restoration and refinishing
- values of boatanchor gear
- sources for parts
- questions and advice for others
- Morse Code operation - advice, legends and lore
- Modes of operation: CW, AM, early SSB
- manufacturing during the boatanchor era, including companies, personalities,
and manufacturing techniques
- design and engineering history of equipment of the boatanchor era and
comparisons to prior technology (arc- and spark-gap transmitters,
Alexanderson alternators, galena detectors, magnetrons, Nixies, quartz
crystals).
- other subjects of a historical nature

- commercial postings, if SPECIFICALLY offering products and services DIRECTLY relating to boatanchor collecting.

OFF CHARTER TOPICS.
The following subjects are off topic in this newsgroup:
- discussions of hi-fi, stereo, and/or broadcast receivers. (use rec.antiques.radio+phono and rec.audio.tubes newsgroups)
- antique equipment (use rec.antiques.radio+phono)
- entertainment television receivers
- cross postings from rec.radio.swap
- discussions that are more appropriately held in other rec.radio.amateur newsgroups, such as code vs no-code
- off-topic commercial postings are specifically prohibited from the newsgroup

FAQ.
- A list of Frequently Asked Questions will be developed by volunteers in the newsgroup and will be posted monthly. This FAQ will be helpful to beginers as well as first time visitors to the newsgroup. The FAQ will contain a list of commercial vendors who specialize in products and services of value to boatanchor collectors.

END CHARTER.

3284. Re: Collins ART-13 Still Available

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <5jfumb$l43@dfw-ixnews10.ix.netcom.com>
Source record: 120874

Earl:
Remember there are plenty of sharks around here who
have no problem at all screwing the inexperianced.

Don't let anyone tell you that your ART-13 is
worth $5 or "you can just throw the worthless
old thing at me. I'll be a good guy and pay shipping."

Yeah right.....

In the military collector's market, which is small but
growing, it will bring $75-$110 dollars if complete
and unmodified. Don't expect an immediate response
as we are a minority group. The ART-13 is a fine transmitter
and will eventually sell to someone. I use one regularly
in its original/unmodified condition and am happy with it.

3285. 8122 reliability?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-21 00:00:00 UTC
From: J-M Noeding <la8ak@online.no>
Message-ID: <335B8613.31E7@online.no>
Source record: 120875

we had a lot of difficulties with 8122 tubes in 80m coast station tx. We started prosedure to let it heat up one hour with only heater, then applied grid bias, and later the anode supply without screen supply. This improved the situation, but still - from a collection of 25 we measured 5 defective tubes - using Fluke 8020 meter, the defect was shortcircuit between grid and cathode.

Hi Yves - You were correct to post your WTB ad here. As I recall, the charter for this group does allow BA-type ads here. The complaint was that ads do not belong on .equipment (true!) and for some odd reason that complaint was cross-posted to our group here.

.Swap has been over-run with ads of land-mobile commercial gear; it's difficult to find BA gear on there amongst the 100's of other ads that appear daily.

73, Jeff KH2PZ

3288. Mil Radio gathering #2

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-21 00:00:00 UTC
From: Ed Zeranski <ejz@nosc.mil>
Message-ID: <01bc4e7a$3fb78660$63bc3180@ejz.nosc.mil>
Source record: 120878

The Mil Radio Collectors Grp. is meeting this year on May 3 in San Luis Obispo Ca. Dave Ragsdale has signed us up at the Camp San Luis Obispo NCO Club which is approx. 5 miles nort of town on Hwy 1 . This year there will be a $2 fee to cover the cost of the meeting place. Last year we passed the hat to pay for the room which Hank Brown had paid for out of pocket. There is a campground with RV hookups about 50 feet from the NCO club which will be available to folks associated with the Mil Radio. There are 12 spaces with RV hookups, $10 for full hookup $8 for partialper day. If no hookup is needed there is a large field area that is ok for tents and RVs at $5 a night. Make arrangements through the billeting office, 805-594-6500. There is a small playground right behind the NCO club with swings etc for the kids. Dave also would like to know how many people would be interested in a BBQ at lunch for approx $6-$7 each as there is a kitchen and big BBQ right there. If enough folks are interested Dave will handle the logistics

A list of the area motels is available. Dave has sent an area map and written directions which I'll pass along with the motel list. Henry Engstom is finishing up a program that I'll post also.

Last year was fun and interesting with black, green, and a few gray radios available for inspection/operation so if you plan to bring something let me know and I'll pass it to Henry. Bring along a want or swap list to share with others. There will be demos of and talks about military radio equipment use and restoration. A swap planned before the meeting, 0700-0900, for participants. Hard copies of the maps etc will be mailed to folks on the MRCG list and anyone who wishes to show up.

--
Paul A. Froehlich
Cross Plains, WI
pafroehl@facstaff.wisc.edu

>>
Paul

standard practice is if there is a slug tuned coil, and a trimmer ---

The slug tuned coil (sometimes a very large value trimmer cap as well
in some designs) is used to set the LOW end of the band alignment.

The small trimmer cap is used to set the HIGH frequency band end of
alignment.

For example, if you set covered from 2 to 6 MHz in one range, you would
set the osc. trimmer for the correct dial reading at somewheres near 6
MHz, and again adjust the coil slug for good dial correspondence at
a frequency near two MHz. The steps must be repeated several times
as the adjustments interact!!!

Once the oscillator is tracking properly, you must again perform the same
steps with each of the RF stages, aligning each coil for good low
frequency

calibration, and the trimmers for the best high end calibration. These will
also interact to a degree, and the steps must be done several times until
no further improvement is note.

As an aside, some sets do provide for low end calibration, relying on either
fixed padder capacitors, or production tolerances of coil value to be close
enough. Some sets, instead of using slugs, using a large value "padder"
capacitor in series with the coil for aligning the low frequency of the band
in question -- especially on band ranges below 4 MHz or so.

Best of luck,

Peter

Message-ID: <01bc4e94$e73ea520$8f0aaa9d@pc-tir22.pac.sc.ti.com>
Source record: 120885
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

I have searched for the KWM-380 noise blanker board and speech processor board for almost a year now, it seems they cannot be purchased any more. It is just impossible.

Therefore I am planning to build these boards from scratch for my KWM-380

I would like to keep them as close as possible to the original, of course. For that purpose, I am looking for the original Collins documentation: schematic diagrams, part lists and PWB layout, and what else there might be.

Therefore, can any-one get me copies of the original documentation ?

Also, if there is people out there who are interested in this project and want to share the PWB board costs (and the results!) with me, please be my guest. I plan to have these (bare) boards done at a professional PWB manufacturer, which won't be cheap. So the more people we can find, the better.

Maybe someone else picked up this project in the past already. If you know that person, I would appreciate it if you send me his/her name.

Try loosening and re-tighten the screws that hold the pc boards to the
chassis. The boards are grounded to the chassis by these screws. The
grounds tend to become poor over time and this can cause a lot of
strange problems.

Source record: 120893

FOR SALE- I have a Yaesu FT-901DM station that works perfectly
and is in "MINT" like new condition.
Will sell items seperately.

FT-901DM just back from Yaesu for alignment to factory new spec's.
$575.00
SP-901P speaker/patch $85.00
FV-901DM remote vfo with 40 channels memory and up/dwn scan $230.00
FC-902 500 watt ant. tuner $150.00
Original YD-844 Desk Mic for 901 station $70.00

All prices plus insurance and shipping via Post Office.
All equipment works perfectly and comes in original boxes with all
manuals.
This is probably the nicest 901 station around.

Good point, although the same effect might be better served by
separating the commercial gear. I am sure that the motorola guys are
as sick of sifting through the TS520's as I am of downloading 75
headers to find that 55 of them are for
trunking/sabre/jobcomm/phoenix/whatever commercial band rigs that
don't interest the average ham. How about rec.radio.commercial.swap,
and let r.r.s. pick up the rest of the SW/ham/scanner/CB/etc. gear?

Ok, it may not go in this group but I have to get the word out somehow so
I am letting you know here.

The funniest web site EVER has now officially opened using REAL AUDIO technology.

Blackout's Box
WWW.BLACKOUT.COM

You will laugh, you will cry, you will pee on yourself... you will cough up your lunch
from the intense amount of laughter you will be experiencing.

You MUST check out Blackout's Box at

http://www.blackout.com

Hear the most insane stuff you have ever heard, broadcast to your
computer instantly over the net with REAL AUDIO 3.0 which you can DL
for FREE if you don't have it already. This is not a commercial site or a business
or any other type of advertisement. It is just a very funny and very FREE site that I
want Everyone to know about. If you like Monty Python, Jerky Boys, Howard Stern,
Kids In The Hall, The State, Robin Williams, Who's Line Is It Anyway,
or anything like that - you will love Blackout's Box, there is nothing like it on the net.
Don't let the words 'prank call' scare you away.. this is no 12 year old fun, this is
intensely funny candid phone call radio drama that critics on and off the net are giving
two thumbs up.

Blackout's Box simply kicks ASS, stop whatever work you are doing,
take a break, and check it out now! Life is short - LAUGH some.

Blackout's Box
Insanity On the Net

Hello,

Help! I need a photo copy of the diagram sheet in the NC-303 manual that shows the (picture)location of the pots and trimmers associated with the alignment chart. For some reason, my manual does not have that graphic. I know the NC-300 manual has this picture but am affraid it may not translate exactly to the NC-303. Can anyone offer any help? Thanks in advance.

I recently acquired a Heathkit SB-102 and find that the grid drive
and ALC meter readings slowly decrease the longer the rig is on.
After about a half hour there is no indication of grid drive or ALC,
and the power in the tune position is about 50 watts. Any suggestions
of where to look for the trouble??

Mark, KF0CG

> I've ever seen in the past is a single trimmer!
> Any ideas on how to proceed? Thank you...

It's been almost exactly 30 years since I've done this so excuse any
fuzzy spots:

First get the IF's aligned. It's tricky on this radio as there is a
separate
AVC IF amp stage, and another noise amp stage. The signal gets LOUDER
as you DEtune the AVC amp, which is exactly backwards from what we're used
to. Also note that some of the IF trimmers have B+ on them, so use
an insulated tool and don't short the tool to the shield can. Be sure you
align the IF's near the crystal filter's peak frequency.

Then you can tune up the oscillators and RF stages. The general drill
is to adjust the coil near the bottom end of the band, the trimmer
near the top end. Take care as the coils and trimmers are a bit fragile.
You may want to do apreliminary pass just to correctly identify
and lightly mark each coil and cap.

Do this at least twice as they all interact a bit.

Good luck.

You bet! I'm very glad to see that the r.r.a.b charter
doesn't prohibit ads, because I refuse to grind my way
through r.r.s every day. Most of the stuff there (say 85%
or so) is of ZERO interest to me, anyway.

Frankly, I appreciate a lot of the ads in r.r.a.b because
many of them are informative. They help me to better
know and understand some of the equipment.

FS: National NC-155 receiver

Condition: Excellent, all original, no mods, orig knobs etc. very fine
hairline scratches on top. Front panel is beautiful.

80-10 meters, ssb/cw/am
I.F. selectivity control down to .5kc
Very sensitive

This is the brother to the NC-270. It is almost identical except for the
design of the s-meter. Blue finish and has the "flip-foot" leg to
elevate the front.

Very clean on the inside and no sign of tampering.

This is a very rare, fine looking receiver and would make a nice
addition to anyone's National collection.

Price is $125 plus shipping to your qth.

Greetings, Boatanchor and GlowBug fans!

I need a small filter choke for the low B+ line in a transmitter
power supply I'm building. Something around 8 to 12 Henries at
100 mA or so should do the trick. Needs to be fairly small in
size (limited space in the chassis).

Okay guys, check your junkboxes...

I agree with Bob. While I would enjoy seeing more discussion threads
and Q & A threads on this group, I still feel that this group has done
much to keep AM and the accompanying "Boatanchors" alive on the
hambands. Let's get more discussions going, BUT if there were NO
buying and selling allowed, I would "unsubscribe".....it's an
important facet of this wonderful hobby.

While the "leagalese" of the charter is interesting, I think that this newsgroup is working just fine! I really would like to see more discussions.Q&As, but the buying and selling of BAs is a very important aspect of this hobby and I think that it does much to promote interest in "boatanchors". Heck, to say the least, the more boatanchors that get sold and used, the more discussion will take place down the road (i.e., people will be asking questions on fixing these monsters...hi!).

DON't pull buying and selling away......we need it here!

:I would like to find out any data on a B&W 852. It is a tapped inductor
:for a Pi Network, Looks like 5KV or better. Would like to know the
:rating and the inductance at the taps. This unit has a built in rotary
:switch to change taps. Thanks for the help N1DVE, Jacqui

These are really nice units. They could easily run at 5kW. I think B&W is extremely conservative in their power ratings.

I ordered mine for an 8877 linear back in 87. Took them a few months to deliver, mainly because unit was at plating shop for so long. But was worth wait. Think I paid about $120 for it back then.

They also sent along extra switch hardware and contacts. A real class act.

But, don't do what I first did before I decided on B&W: I bought one of those silver plated roller inductors using spiraling rectangular conductors. Insulation was lucite or plexiglas. On 10m the insulators started to bubble and explode like fire crackers. It might work for antenna tuners, but not in amp tanks.

THe inductance is dominant at the low frequency end of each band and the
capacitance dominant at the high. It is a matter of tracking the dial.
Repeatedly adjust the inductance of the oscillator at the low end and
the capacitance at the high end until it tracks the dial. Then tune the
rf stages. I had an SX-28a, sorry I ever sold it. Does yours have the
military modification on the front end to decrease blocking? It reduces
sensitivity but helps when somebody nearby opens up on the same band.
good luck, -rgb-

A fairly common problem with ceramic power tubes, being that the grid & filiment mesh is only a millimeter or less, away from each
other.
EXTREME care should be used in handling and shipping of used tubes, as the components are very brittle after use.
Viberation or a small shock can cause failure, not to mention the dreeded "overdrive".

Well, that seems to help settle the question contained in several
threads discussing whether to post advertisements or not... but has
the FAQ been published here lately?

Yeah, I actually do like the mix of discussion and ads in here though. Rec.radio.swap does get a bit overwhelming if one doesn't read it everyday. 120+ postings per day it seems to average; 520-something from Friday before dinner until late morning this past Monday. Not as bad as some of the Windows related newsgroups though -well over 1K per day!
Regards, Chris

Already been done, more or less, Bill...

rec.radio.amateur.swap is for the Ham gear (non commercial)

rec.radio.swap is for everything else.

Perhaps even finer divisions are needed?

The prohibition against ads in the various non-swap groups can be
found in the FAQs and Charters for the groups.

This points up a very common problem to all news groups... People
don't bother to look up and read the FAQ and Charter prior to starting
to post.

>I'm not a dealer, just very interested in BAs. If they were verboten I
>would still come and read, but I would enjoy it a whole lot less.

The vast majority of the ads that appear here are also being cross
posted to either the r.r.swap and/or r.r.a.swap groups. Why not read
them there?

On the same topic, for the BA folks, if there is enough need/demand,
why not create a r.r.a.ba.swap group?

>Why not have a person responsible for contacting blatantly non-BA ads
>and show them the error of their ways... with the suggestion that they
>will be set for rejection should they post 3 in one year.

Actually hard to do in an unmoderated group, Ed.... Instaed, we almost
are forced to rely on people knowing what is acceptable group behavior
and abiding by the "rules" and Charter.

>Ed Tanton N4XY n4xy@bellsouth.net

Bienvenue Yves:

You were correct in posting your WTB articles to this group. Also FS, TRADE, HELP etc are the raison e'etre for the group PROVIDED they relate to tube-type radio communications equipment. I am pleased you found a Johnson Ranger II and wish you much fun with it. There is a collection of audio and other modifications for the Ranger I that is available on the Net and may be of some interest to you.

We encourage discussion of just about any aspect of vacuum-tube based radio communications equipment. There also are two mailing lists, both called Boatanchors which may be confusing, but one is free and the other has an annual subscription fee. I read both mailing lists as well as this newsgroup and my conclusion is that the subscription list is the greatest collection of wisdom and knowledge on the subject that existst today.

Actually Marty, it sounds more like your ISP falls for every bogus news-
group that's created outside of the recognized and accepted procedure.
There was no Call For Discussion, nor was there a Call For Votes, and
there was no posting of any r.r.a.swap charter. Thus, it's bogus and
will eventually be cancelled.

(Are you sure it's not under the alt hierarchy?)

These fall well outside my normal interests so are available for trade
(i like audio tubes...845s for instance)
All these are new most in orig boxes
4 pcs 4EP7 (Etel, UK)
2 pcs 5083-0952 (Hewlett Packard) integral graticule
2 pcs 21424-G1 (GEC UK) integral graticule
1 pc D13-34/CV5125 (mil, UK)
2 pcs DH7-11/CV8884 (mil,UK)
as well as a bunch of the older non-flat faced toobz like 5CP7 etc
cheers
Mike

Is it an 880/2 or anEA12? Most were solid state.

3360. Halli SX-28 Followup: Thank You

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-23 00:00:00 UTC
From: pafroehl@facstaff.wisc.edu
Message-ID: <5jkr46$2oe2@news.doit.wisc.edu>
Source record: 120704
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Thank you everyone for all the help and suggestions with my
Hallicrafters SX 28 alignment process. I tried the iterative
approach that was suggested and it worked well. The only problem I
encountered is that the iron slugs have started to crumble, but
fortunately that did not prevent obtaining a good alignment.

3361. Big Auction of Antique Radios is this Saturday 26th.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-23 00:00:00 UTC
From: "John H. Dilks III" <oldradio@worldnet.att.net>
Message-ID: <5jkm6f$3ap@mtinsc03.worldnet.att.net>
Source record: 120705

To all,

This is a Reminder: The Big Auction of Antique Radios is this Saturday 26th. in Downingtown, PA. You can get a free auction catalog at the following location:

http://www.eht.com/oldradio

or for challenged Browsers (vintage 1)

http://www.cyberhost5.com/eht/oldradio

I'll see you there! Bring lot'sa money. It should be quite a "Social" event for us poor folks. :-) hi-hi.

73' John Dilks, K2TQN

3362. FS = RS-6 (May be a Spy Radio, maybe not?) Anyway it's For Sale!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-23 00:00:00 UTC
From: "John H. Dilks III" <oldradio@worldnet.att.net>
Message-ID: <5jkmfl$4in@mtinsc03.worldnet.att.net>
Source record: 120706

For Sale

RS-6 (May be a Spy Radio, maybe not?) Anyway it's For Sale!

This little beauty can be yours and you can call it anything you want once you own it. Note: New owner must be "thick skinned" if it's called a "Spy Radio" :-)

Included:

Serials #'s
RR-6 3769
RT-6 3837
RP-6 4681
RA-6 unknown

1 (1-1/2 cu ft. approx) lot of new spare parts (most still military wrapped).

The lowest price I will take is $400. I will bring it to the Downingtown Antique Radio Auction this Saturday if anyone is interested and they will be there. (I must have the money before the Auction - I don't want the buyer to spend it in there - I want to do that.) --- so, let me know.

73' John Dilks, K2TQN

A brief discription is in order: "Radio Station RS-6 is a compact four-unit set for transmitting CW and receiving CW or AM. It operates from
a-c, storage battery, or hand generator, and consists of Transmitter RT-6,
Receiver RR-6, Power Supply RP-6, and a Filter-Accessory Unit RA-6." (From
the manual) The TX and RX are 6 3/4 x 5 x 2 1/4 inches with rounded corners
and recessed controls. The were ostensibly designed to fit in a trench coat
pocket. All cables are contained in the units. The frequency range is 3 to
16.5 MC. The RR-6 is a superhet using 6-volt subminiture tubes. The RT-6 is
a crystal controlled 6AG5 driving a 2E26 delivering about 10 Watts.
This set was covered by a one page article in the AWA Old Timers Bulletin for February 1993. The info in this article was mostly drawn from

the tech manual, but there was a suggestion that these sets were issued
to
B-47 bomber crews in the 1950's. --- thanks to Al Klase for this.

3363. FS Hallicrafters SX-71

Hallicrafters SX-71, Serial # 104, in very good condition. Fully operational with only a few chips in paint. Original Hallicrafters owner's manual included.

This unit is surplus to my requirements, but I fire it up every so often just to swl. I purchased this unit from the original amateur owner who used it in a tx-rx station.

I've found this trick very useful. Look inside any radioshack device (2 meteramp Transeiver etc) if you find a part that matchs your needs call RSparts at 1-800-the-shack. Tell them you need that part! Inside the little 2 meter amp are 3 variablecap. I know 1 of them is a 10-50 pf unit. It'll set you back a cool $1.99....Good luck!

To: Retail, wholsale, OEM, and industrial customers
From: Connectors Unlimted - Sales Dept.
Date: April 01, 1997

Effective immediately, Connectors Unlimited has terminated all small dollar retail sales. We will continue to supply "Name Brand" products to our wholsale, OEM, and industrial customers who meet the minimum order requirements.

Our "Generic" connector line has been discontinued. Inventory will not be replaced. Most connectors and adaptors are available in one or more of our "Name Brand" lines. These lines are simply higher grade, better quality and manufactured to more stringent specification. Prices are, on average, 60% - 100% higher than our Generic line.

Existing inventory of products in our "Generic" line will be sold by lot with a minimum order of $250.00 or the entire line item. A complete listing of this inventory will soon be available by e:mail and on our Webb site. Any one interested may send a message to:

sales@connect.mv.com

with a subject of "Generic Inventory"

You will be added to a distribution list. Information will be distributed as available.

What kind of Boatanchor should I get ?
Where can I get a Boatanchor ?
Epilog

Credit - Rick Stealey K2XT got rec.radio.amateur.boatanchors created
as an official newsgroup. The original boatanchors e-mail list was
created by Jim Lockwood KM6NK, and is currently managed by
Jack Hill W4KH -- its high signal-to-noise ratio should be
an inspiration.

Much of this FAQ was put together by John Brewer WB5OAU/4 for
the original boatanchors e-mail list. Other info has been gathered from
various sources by Michael Crestohl W1RC and Nick England KD4CPL.
A big Thank You to all who have contributed !

Disclaimer - While we believe this info is reasonably correct, all
responsibility for use of this info is yours, not ours.
BE CAREFUL - Boatanchors are heavy and contain lethal voltages !!

Why Boatanchors ?

Some may question the desire for 80 pound receivers and
100 pound transmitters, both with filaments sitting there
getting hot and wasting power in this day of microprocessor
based, mega-memoried miniaturized transceivers! Although
modern radios are extremely good at what they are designed
to do, they are about as interesting to operate as a
toaster oven. They have no soul.

Additionally, many find a zen-like feeling in taking an
old, misused ratty old radio and carefully restoring it
back to health. Like cars of the era, boatanchor radios
were made to be worked on, modified, and tinkered with.
Many think of it as Real Radio in this era where fixing
a transceiver is accomplished by boxing it up to send to
the manufacturer for a custom VLSI chip replacement.
Indeed, a warm soldering iron is almost a requirement
for operating a vintage station.

Others claim that boatanchors SOUND better than their
silicon descendents, and this is generally true. The
audio from a Hammarlund or National receiver, or a
Johnson transmitter can sound much better than the
300mW audio coming out of the 2" speaker in the
typical transceiver.

Watching the flicker of 807 modulators in a Viking I
as you speak into a D104 mic, is certainly more stirring
on a winter night than considering hole and electron
flow.

If truth be known, much, if not all of the above, although
true, are merely justification for the insatiable hunt
for more and more of these old boxes, simply because they
are just too NEAT to have and operate!

What are Boatanchors?

Big. Heavy. Old. Fun.
"Boatanchor" is a fond term for vintage tube-type ham radio and
communications gear. Manufacturers like Hallicrafters,
Hammarlund, National, Johnson, RME, Heath, Collins, etc.
made this gear roughly through the mid 1960's. Also included is
tube-type military radio gear, homebrew gear, station accessories
like microphones and keys, and test equipment of that period.

What is this newsgroup for?

The polite discussion of boatanchor related topics:
Restoration, Repair, Operation, Collecting, Historical info,

Parts sources, Legends and Lore, Vintage operations,
Vintage station accessories (keys, mikes, etc.)
Boatanchor ONLY buy/sell/swap

Who is welcome here ?

ANYONE interested in Boatanchors.
Hams, Non-hams, SWLs, military surplus fans, etc.
Newcomers, old-timers, thrill-seekers.
Men, Women, Boys, and Girls of all ages.
Commercial posters sticking to boatanchor topics

What is this newsgroup NOT for?

Newer equipment discussion (use rec.radio.amateur.equipment)
Vintage broadcast and phono gear (use rec.antiques.radio+phono)
Vintage audio gear (use rec.audio.tubes)
Vintage solid-state gear (try the VSS list -
Send e-mail to listserv@fablotz.min.net.
Put "subscribe vss" in the message body)
Homebrewing with modern technology (use rec.radio.homebrew)
Non-boatanchor buy/sell/swap posts (use rec.radio.swap)
Antennas (use rec.radio.amateur.antennas)
General ham info (use rec.radio.amateur.misc)
Code vs No-Code (use rec.radio.amateur.policy)
Flames (use alt.flame)

Book Summary - courtesy of Michael Crestohl, W1RC w1rc@amsat.org
---
1. RCA Receiving Tube Manuals. I have several editions in my library
because older tubes were deleted and newer ones added between editions.
I won't list all the tube manuals in my library but they are spaced out
over three-four year intervals. The latest one I have is RC-25 which
is dated 1966 and has 607 pages. Availability: Hamfests & shows $5.00
to $15.00

2. RCA Transmitting Tube Manual - 1962, 320 pages includes the lineup
of transmitting tubes including the venerable 807, 6146, 811A, etc.
Availability: scarcer than the Receiving Tube manuals but I've seen
them around - $5 - 15.00

I believe both these manuals have been reprinted and are sold by AES in
Tempe AZ.

While on the subject of tubes....

3. Tube Lore, Ludwell Sibley 1996 ISBN: 0-9654683-0-5 $19.95 available
from author (Flemington NJ 08822). 186 pages. Excellent reference
source on the subject written for collectors and vintage radio buffs.
Features cross-reference on tube types and general essays on tubes.

4. Elements of Radio, (William) Marcus & (Abraham) Marcus. 3rd Ed. 1953
771 pages. Prentice-Hall Library of Congress Catalog No. 53-8544
A classic text that focuses on radio receiving theory. Very well
written and presented. Good first text on BA technology.
Availability: Should be easy to find at any vintage/antique radio
show - $5 - $20.00

5. Radio Servicing - Theory and Practise, (Abraham) Marcus, 1954, 794
pages, Prentice-Hall. Library of Congress catalog number 53-9729.
A good second text that follows on Elements of Radio. Quite thorough
in its coverage. Availability: same as Elements of Radio.

6. Elements of Radio Servicing 2nd Ed. (William) Marcus and Levy, 1964,
566 pages. McGraw-Hill Library of Congress catalog number 54-9698.
Its very interesting that the "other" Marcus collaborated with another
author to write a similar book. As with Radio Servicing - Theory and
Practise it is focused on radio receivers with emphasis on broadcast
radio repair and troubleshooting. Availability: same as Elements of
Radio.

Here are four US Army TMs that I think are really good for learning about
Boatanchor technology: I found these to be of particular help when learning
about this stuff back in the 1960s.

TM11-4000 - Troubleshooting and Repair of Radio Equipment. April 1958,
177 pages. R-390 enthusiasts will especially want to get this book if
they can as it uses that receiver as the "sample", although not actually
identified as such. As it was written for soldiers it is clearly presented
and covers receivers and transmitters. One of my favorite texts.

TM11-662 - Basic Theory and Application of Electron Tubes. February 1952.
215 pages.

TM11-664 - Theory and Use of Electronic Test Equipment. February 1952.
158 pages. Covers meters, tube testers, signal generators, etc. One
of the neat things I like about this book is it details the venerable
mil surplus test gear like the URM-25D, TV-7(*) and other equipment
of the era. Very important book for any BA fan.

TM11-665 - CW and AM Transmitters and Receivers, Spetember 1952, 274 pages.
Another essential book to have. Title is self-explanatory. Another
personal favorite.

On availability: These may be found for a few dollars at flea markets
and vintage shows if you're very lucky. They are otherwise hard to find.
I don't know if they are available through NTIS. I've seen them go for
$15.00 to $20.00 a copy. They're well worth it.

There are other military TMs that teach DC, AC theory, antenna/propagation,
power supplies, etc in this series but I have omitted them because they
are really generic and not Boatanchor-specific. However, if the editor
feels they should be included I will be glad to provide a description of
them. The Navy also has an excellent set of manuals that accomplish the same
purpose and are quite excellent as are all Navy technical manuals.

Finally, there's Fundamentals of Single Sideband published in 1959 by
Collins Radio Company. This book is quite technical and detailed on
the subject written by the engineers who designed and developed SSB.
There is not a picture of any of their amateur line in the book although
the theory certainly applies to any filter-generated SSB transmitter.
Its about 200 pages with lots of charts and diagrams. Availability is
very scarce and I've seen them priced from $50.00 and up. I believe there
was a reprint in the 1970s and these may be found at a much lower price.
The original is a large paperbound book with bright yellow covers.

The titles above only represent a portion of my radio library and I have
selected them as my favorite books of interest to Boatanchor enthusiasts.
I have several other titles from the 1940s and earlier but did not list these
as I do not feel they meet the criteria for this purpose, ie: the
technology is pre-BA and falls more into the realm of antique equioment.

Copyrighted 1997 by Michael Crestohl. Permission to reprint granted
provided credit is given.

Where do I find Boatanchors on the air ?

HF AM hangouts - 1885, 1995, 3885, 7295 KHz (East Coast of US)
1925, 3870, 7295 KHz (West Coast of US)
14.286, 21.40-21.45, 29.0-29.2 MHz

HF CW hangouts - lots of places, particulary 3579.545 KHz

VHF AM info
http://rob.acol.com/wwwboard/radio/ham/vhf-am/

6m AM - 50.4 MHz

2m AM - it varies, 144.4 MHz is common

How can I practice Safe Boatanchoring ?

This is a genuine concern! Boatanchors have Real Voltage
present in them! Lethal voltages. You will find that
capacitors really DO store charge! None of this wimpy
12 volt stuff!

Get back in the habit of discharging any capacitors that
are lurking under the hood. Keep one hand in your pocket
when working on a hot radio. Be REAL careful and THINK THINK
THINK before twiddling with a boatanchor that must be
powered up and worked on.

It is SO easy to get used to working on solid state equipment
and not worrying about Real Voltages... don't do this!

Also, many older radios are not fused... receivers are good
examples of these. I generally replace the line cord
(they usually need it anyway) and either put an in-line
fuseholder, or some of the Heath-type fused plugs in the
radio. Better still, replace the 2-wire plugs with a more
modern 3 wire plug. Barring that, ensure that you strap
every cabinet with healthy sized cable, to a common
station ground. This will prevent _you_ from becoming the
cable between two pieces of gear at different cabinet potentials.

Fires are nice to have burning on winter evenings
but not when they are on top of your operating desk.

Speaking of operating desks, you will become good at carpentry
if you spend much time as a boatanchor operator. You will
quickly discover that the table you used to operate your
tranceiver is way too small, and waaayyyy too wimpy to support
a growing boatanchor station!

How do I restore a Boatanchor ?

This subject could easily fill many pages.
There is a lot of really good info from Hank Van Cleef in the
rec.antique.radio+phono FAQ:

http://www.cis.ohio-state.edu/hypertext/
faq/usenet/antiques/radio+phono/faq/top.html
ftp://rtfm.mit.edu/pub/usenet/
rec.antiques.radio+phono/

Below are just some common topics.
The newsgroup is a good place to ask about other issues.
Remember the radio that stares at you from
your bench is old. There are not many around. Take that into
consideration as you proceed through the process. If you
erase the dial marking on your receiver by cleaning it
with Windex, you likely will not find another at Radio Shack.
Take your time and enjoy. The journey to a working boatanchor,
like life, is the _point_ not a process. You will say less
nasty words if you take your time.

Some general restoration tips:

* Check fuses before powerup. Many 'anchors will have the
wrong value fuse in it. Checking the fuse before purchase
is a good thing to do too. If it's open, you at least know
what you are getting into.

* Check the resistance from power line to chassis before
powerup. Most boatanchors have bypass capacitors from the AC lines to
chassis and these sometime have deteriorated. Replace with caps made
for AC line bypass applications (available from Digi-Key, etc.)

* Power up old radios gently. Plugging it into the wall and
turning it on is not gentle! Bringing it up slowly to operating
voltage with a Variac so that electrolytics can "form"
is gentle.

* Don't trust that the tubes that are in the sockets are the
correct tubes. Check them against the schematic. If you
don't have a manual (and even if you do) note which socket
the tube came from so that you can replace them correctly.

* Don't clean tubes with water. The marking on the glass
will likely come off with one good swipe of a water dampened
cloth.

* Assume many electrolytic and paper caps are bad. Check them.
Paper caps should read "infinite" ohms on your ohmmeter.
Electrolytics should read a very high value after settling.
Paralleling a known good electrolytic is often a good way to
check an electrolytic.

* Check high resistance, and high wattage resistors for
correct value.

* Nifty tools to have are flux brushes, for cleaning nooks
and crannys. Windex is nice for cleaning chassis.
Qtips are good to have too.

* NEVER clean dial markers or drums. If you do, assume that
they will wipe away never to be seen again. You WILL say
bad words if this happens!

* WD40 or Scotts Liquid Gold (my favorite) applied to a clean
wrinkle finish will do a great job of restoring the lustre.
Works well for knobs too!

* Never use WD40 or Scotts Liquid Gold on anything until you
have tried it on a non-visible part of the cabinet to make
sure it won't dissolve anything.

* It is a poor job that doesn't require at least one new tool !
From Ed Zeanski-
- adjustable knurl wrench for removing knurled toggle switch
nuts -
Techni-Tool Phone 215-825-4990
5 Apollo Rd, Box368 sales 941-2400
Plymouth Meeting, PA fax 828-5623
19462

These folks listed 2 adjustable knurl wrenches, 1/2" and 5/8",
for $13.20 ea. My catalog is a year old so the price might

have changed. The collet in each allows 1/16 adj to allow for
finish thickness. Brand is listed as "Knurl-Tite",
stock# 388WR014 for the 1/2" and #388WR016 for the 5/8".

Aren't tubes and parts impossible to find ?

Nope - there are lots of tube dealers attending hamfests and
antique radio swap meets, and selling via mail order. Besides,
there are lots of 50 year old tubes out there working just
fine.

Fortunately, hams are notorious packrats and parts suprisingly
abound, for old gear, particularly at hamfests (and in the
boxes under the table as mentioned earlier). Word of mouth
once again will work wonders at getting tubes, high voltage
caps, and the like shoved in your direction. Beware that this
is an addiction, and boatanchor radios, parts, and periodicals
will soon overrun all available space. Trust me.

Where can I get tubes and other parts?

What type of Boatanchor should I get?

This is a question that has as many answers as there are individuals. Generally, as a "starter" boatanchor, 50's vintage gear is probably the best way to go. Radios in this era are quite desirable, but often times won't require extensive surgery to get repaired and on the air.
A radio from a well-known manufacturer is also a good choice... for receivers, look for Collins, Hammarlund, Hallicrafters, and National are all good radios. In the transmitter space, Collins, E.F. Johnson, and Heathkit (with certain reservations) will do well.

Transmitters with plate modulated AM are the more desirable units. Prices will generally reflect this.

Good "starter" transmitters include, but are not limited to:

Johnson: Ranger I or II/Viking I or II/ Valiant/500
Collins: Any 32V series.

Heath: Apache, DX100A or B
(my AM bias is showing!)

"starter" receivers include:

National 183/183D, HRO60 and MANY others
Hallicrafters: Many SX series.
Hammarlund: HQ129, HQ150/160/170/180, Super Pro series, many
others.
Collins: any 75A series.

By "starter" radio, I do not mean to indicate the cheapest! Most
of these radios would also be on the "best" list. I selected
these as they _are_ some of the best, and when one is starting
anything, it is good to get the BEST stuff available, rather
than getting junk and getting discouraged with it. There will
be enough to learn (or remember!) without having to compensate
for marginal equipment (was that 'Peak the plate and dip the
grid, or the other way around??')! Any radio from this list
will do the job for some time, and make operating a pleasure.

Where can I find Boatanchors for sale?

The best way to find a boatanchor is to let other hams in
your area know you are interested in them. Often times
I have been given a boatanchor, because the former owner
has relegated it to the garage or basement. This is also
the cheapest method. When attending a hamfest, ask some
of the sellers if they have any for sale. Often times
sellers won't bring such stuff, as it is HEAVY and is
perceived as not being sellable. Look under the tables,
and in the back of the sellers displays for them! While
you are under the tables rummage thru the boxes of parts
found under there for parts that will come in handy restoring
your new-old treasure. Tubes, high voltage caps, vintage
microphones and connectors may be found lurking here!

If you are in a hurry (and have money) ads in Electric
Radio magazine, the Ham Trader Yellow Sheets,
or your local packet BBS are good places to look. Expect to
pay more through these outlets. Also expect to become an
expert in UPS shipping rules. Boatanchors are heavy, and
often the cost of shipping one can exceed the cost of the
entire unit.

EPILOG

Don't look as boatanchors as an investment. Get a really grimy
specimen and clean and fix it, and coax it back to life. Turn
it on with the rest of the room lights turned off. As it warms
up look into the insides and see the orange glow from the filaments
and the purple fire from the 866's. Watch the giant S-meter
come to life, and the dials emit that soft light, framed
by your carefully cleaned and waxed cabinet. Rotate the
knobs that are of sufficient size and layout to permit
easy, flywheel smooth adjustment.

Maybe tune to the BBC on your NC-183.... watch the S-meter
climb as the full audio comes out from the 6 watt output stage
as you crank back the RF gain. Fiddle with a few more knobs
(boatanchor operation does not need to be a passive experience)
to get it set just the way you want it.

Then you'll know why boatanchors are such pleasent
things to own. Like mine, your transceiver may become a
very expensive frequency counter and RF generator used
to align the 'Real Radios'.

You'll probably have a hard time finding such large trimmers.
The largest I've ever seen was 2000pf or so. larger ones probably exist,
but likely have to be special ordered from a large distributor.

I would try a standard 365pf variable, or 500pf trimmer, and a multi-position
switch to switch in 500pf more per step .

3369. FS: Knight 83 YX 142 Tube Tester

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-23 00:00:00 UTC
From: jkh@meaddata.com
Message-ID: <5jl5md$pn0@mailgate.lexis-nexis.com>
Source record: 120713

I have a like new Knight 83 YX 142 tube tester. This would be ideal for someone trying to maintain or restore vintage radios as it will test 4, 5, 6, and 7 pin types as well as octal, loctal, and 9 pin miniature tubes. It seems to date from the mid fifties but looks like it was hardly ever used. I have the original manual and it was in the original box but it was a little ratty from storage and I pitched it. It has a roll chart. It has the facility to have new tubes added because there is a switch for each pin so that new pinouts can be doped out for the chart. There is a blank socket so that a new socket type may be added if desired. It covers filament voltages from 0.63 to 110v in 16 steps. It is an emissions tester, and also tests for leakage, shorts, gas, and some special tests for certain tubes. I have tested a number of tubes on it and it compares well with my other testers.

I will sell this very clean tube tester for $50 plus shipping in the cont. U.S. Please respond to John Heck, jkh@lexis-nexis.com. Thanks.

> brown with all lettering intact. Anyone know what color it is supposed
> to be?

Exactly what you see. That's what the "EM" designates; "M" for
mahogany. I have also seen blue ones and grey ones. I used to
have one of the "M" models way back when; sold it due to some
inherent dial tracking problems...

It was essentially the S-38 circuit updated for the use of the
then-new "miniature" receiving tubes, what we commonly refer
to as the "All-American Five" (50C5, 35W4, 12BA6, 12BE6, 12AV6).
The tube filaments in series dropped house AC line voltage by
themselves, eliminating the need for a power transformer and
reducing the cost of making the radio. You just have to be
careful which way you turn the AC cord when you plug it in...

While you're counting things, count the number of postings to this thread and the number of newsgroups that are spammed. Which is the bigger bandwidth/time waster??? Sometimes the cure is worse than the disease...

Best thing you can do is to boycot the good deals that are posted here so that I can buy them :-).

I am looking for a SX-28A Hallicrafters receiver in good mechanical and electrical condition. Would prefer one cosmetically correct (i.e. original knobs, panels, meter, etc), but need not be in perfect cosmetic shape, i.e. scratches ok. Want to give to my 10 y/o daughter for her birthday (July) to complete her version of my original novice station.

Thanks to everyone before hand.

3388. Old ham QSL Cards for Sale.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-24 00:00:00 UTC
From: radiorob@serix.com
Message-ID: <335eafc4.842769@nntp2.uunet.ca>
Source record: 120732

Hello:

I was just sorting through a pile of old ham QSL Cards...trying
to thin
out the collection a bit!! As well as collecting cards from stations
that I
have worked....I have also accumulated many older cards that are
either
interesting, different, odd, specialized, weird, neat...or otherwise
worth
saving. I have come up with a box full that I am willing to part with.
I
have packaged them up into lots that are all sorted by subject. These
are
ham QSL's dating from the 1940's to the 1980's. Many of them have
Older
stamps on them and all are rather collectable ....for one reason or
another!!I will list the packages available below with prices for each
pack. If you want a quantity of packs...I will offer a discount
depending
on what you buy.

I am also listing a couple of books for sale. All prices are in USA
Dollars...and SHIPPING is EXTRA.

Please Eamil me direct at..... radiorob@serix.com to reserve any of
these
items.

Hope everyone is having a nice Spring...and having fun at the local
ham
flea markets!!

etc.......
PRICE......$3.00 USA Per Pack. Have 5 Packs.
##
##########
1950's-80's Worlwide
30 Cards. SWL Listener Cards. These are cards that are sent to Hams by
Shortwave Listeners to let them know they heard them!! In some
countries....especially the eastern Block countries...hams had to do
this
type of listening and QSL'ing, before they could apply for their own
Ham
license!! I personally have received some of these cards for QSO's
I've had
on the air. I always sent a card to these SWL's...since it helped them
to
get on the Air!! These are pretty neat..I always like to receive
these...sometimes even more than the cards from the actual station
worked!!
PRICE........$3.00 USA Per Pack. Have 10 packs.

Phil - I was surprised (and disappointed!) at all of the responses to
this request!

Where is Birkett and AJH in Rugby?

I would like ADDRESSES and PHONE NUMBERS for these two if they sell
such trimmers!!

Also - if you want a good long list of parts suppliers that may have
them, try this:

http://www.mnsinc.com/bry/hamfiles.htm

and click on PARTS

All the very best - Brian, AF4K / G3XLQ

Does anyone here know where to buy some "BELLING-LEE" connectors
in the USA? These are used for Co-ax on British TV and used to be used
on a lot of their FM and ham gear too. I need a couple for a British
ham transmitter I got! I've tried all of the usual sources here.

3397. Looking for WB3JBG, KA5JVU, and KC5NG QSL cards

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-24 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5jnl3v$m5i@sf18.dseg.ti.com>

This is way off-topic, and I'm sorry for that, but here goes...

I'm looking for examples of my old QSL cards. Like a dummy, over the years I did not save examples of most of my cards. I want to put up a framed display of one of each of my cards in my hamshack, but I do not have them all. Actually, I can't even remember what some of them looked like.

I do NOT need these:
- WB3JBG card with tower/beam on front (my first QSL from 1977)
- KC5NG card with farm/barn/horses on front

I know one card was a promo from RCA, with a painting on the front side that depicted some sort of communications satellite, and my call would have been hand-written along the right-hand side of the front of the card. I only ever had 100 of these, so this one may be hard to locate.

I also used some temporary U-fill-in cards when I first moved from Delaware to Texas. These will also be very hard to find.

All of the other cards were bought from regular QSL vendors.

If you have one of my old cards that you'd be willing to part with, and the front side is in mint or near-mint condition, please email me and I'll make arrangements to get the card(s) from you.

Thanks very much and 73!

Note that is 5 to 10 nf "nanofarads" not pf "picofarads". That's 5,000 to
10,000 pf,
where common trimmers are 5 to 100pf. A 2-meter rig is unlikely to have a
5,000pf
trimmer. I misread this too the first time.

3400. My 'new' National NBS-1 (and request for documentation)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-24 00:00:00 UTC
From: Chris Broadbent <cfb@bga.com.nospam>
Message-ID: <01bc50bb$c6287d60$483fb5a3@sebastian>
Source record: 120744

At the recent Belton TX Ham swap-meet, I purchased a rack mounted National NBS-1. Apparently, it was used at the National Bureau of Standards in Boulder CO. From what I can tell, it is a very close cousin of the NC-183. I have a fondness for National's boatanchors, and this latest addition is a very handsome unit!

Upon replacing one tube that tested bad and inserting another in an open socket (it was missing a 6H6), I found that the RF/IF/Demod and local CW oscillator seem to work fine. However, the audio is very weak. Upon closer examination, it appears that someone did a couple of modifications under the chassis. It seems they wanted the audio to go elsewhere and thus disconnected what I believe is the audio preamp and added some components for an external feed. What little audio I was hearing seems simply to be leakage into the final AF stage.

Given the complexity of the circuit, I would like to find a technical manual (one that contains the circuit diagram and perhaps even the physical layout of the device) before diving in and restoring it to its former glorious self. If I cannot find one, then it's down to a weekend with a bright light, pencil and paper, and hoping I can make sense of the modifications and now missing connections.

Does anyone know where I might find such a technical manual for this beastie? I would gladly pay for a good copy/reproduction/Xerox of one. If no-one has the manual specifically for the NBS-1, then I would like one for the NC-183. While on the subject, if the operating manual is a separate document to the the maintenance/technical manual, I would like one of those as well.

If you wish to email me, please note that I have suffixed my email address in this post with .nospam, in an attempt to defeat the scads of junk email I'm receiving. Just remove that suffix. Apologies in advance for this inconvenience.

--
Cheers,

Chris. Broadbent (KC5VQL)

NOTE: My email address in this post is modified to prevent spam. Just remove the '.nospam' from the end of it if you wish to email me.

Jeff's right (for once), rec.radio.amateur.swap is a bogus group. And any and all rec.ham-radio.* groups are bogus as well. They were replaced by the rec.radio.amateur.* groups in the grand renaming. And there is no rec.radio.amateur.packet group either. I've seen that as a bogus group on some ISP servers, but it, like the rec.radio.amateur.swap group, is the result of some sysop doing an illegitimate group creation. All Big Eight hierarchies have an established process for creating groups. None of these bogus groups have passed through that process. But if someone wants to do it legitimately, I'd vote for the creation of an amateur swap group, and for a packet group under the digital hierarchy too.

Brian,

Why not look there for a part number? I just had a peek at the
schematic for my Icom 2-meter mobile rig and find four 10nf compression
trimmers, just as the orginal poster wanted. What difference if he
wants to use them as trimmers in a 160M project? Unfortunately I don't
have a parts list for the rig, so can't point him to a source.

Since RS does a good job of supplying replacement parts for their
radios, the suggestion seems to have merit to me.

3403. FS: Globe Scout transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-24 00:00:00 UTC
From: drfyoung@dps.net
Message-ID: <5jo3h1$mhk@news.Hawaii.Edu>
Source record: 120747
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Frank KH6CDO has a Globe Scout 65A (160-10m) transmitter he'd like
to sell for $50 + shipping.

The accessory socket in the rear is missing (believe it was for
a VFO) - the wires going to it are cut and taped together).

Contact Frank at drfyoung@dps.net (I've inserted his address in the
"from" line so you should be able to just "r"eply to this message to
reach him - check your header before sending just to make sure!).

This xmtr is an estate item.

I've never seen compression trimmers as big as 10,000 pF, which is of course not to say they're not available. 10,000 pF has a reactance of about 0.1 ohms at 2 meters, so it's unlikely to be found in such equipment.

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

This is way off-topic, and I'm sorry for that, but here goes...

I'm looking for examples of my old QSL cards. Like a dummy, over the years I did not save examples of most of my cards. I want to put up a framed display of one of each of my cards in my hamshack, but I do not have them all. Actually, I can't even remember what some of them looked like.

I do NOT need these:
- WB3JBG card with tower/beam on front (my first QSL from 1977)
- KC5NG card that was a promo from RCA with satellite on front
- KC5NG card with farm/barn/horses on front

I also used some temporary U-fill-in cards when I first moved from Delaware to Texas. These will also be very hard to find.

All of the other cards were bought from regular QSL vendors.

If you have one of my old cards that you'd be willing to part with, and the front side is in mint or near-mint condition, please email me and I'll make arrangements to get the card(s) from you.

Thanks very much and 73!

3409. Free Marauder Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-24 00:00:00 UTC
From: wiley@interaccess.com
Message-ID: <wiley.115.00915087@interaccess.com>
Source record: 120753

Hi All,

I have finished parting-out a Heath HX-10 Marauder transmitter and have the following parts remaining. You pay for the carton and UPS from Illinois and the parts are free.

Front Panel (2-Piece)
Front Panel Bezels (Meter and Tuning Dial)
Power Transformer
Filter Chokes (2)
Cooling Fan
VFO Sub-chassis (less Tubes)
Crystal Filter
Tuning and Loading capacitors

I do NOT have: knobs, meter, dial scale, Heath/Daystrom label, cabinet, tubes, low-level coils...

I DO have the "boned-out" chassis, minus all the above.

I never had this unit on-the-air, so cannot verify that anything works. There are no guarantees, other than you get what you pay for!

Source record: 120757

I got one.

Mine is mint. 9 out of a 10. I'd give it a 10 but I don't have the box, manual or the antenna rod. Cabinet and front plexiglass has no scratches. Has back particle board in excellent shape. Numbers good and bright. Has original halli tubes which all test good.

Now the "bad" news. Tuning is tight due to lack of use and there is just a trace of hum which means an electrolytic or 2 might have to be change... but it plays on all bands.

I am asking $75 + shipping. It has seen very little use and it looks it. It's my backup RX to my HQ100.

Jim, I think you misread the sizes. 5 nF is 5000 pF, or .005 uF. It's
hard to find full-size variable caps that big, let alone trimmers. I
suspect the original poster will have to redesign his transmitter.

Source record: 120764
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I am reconstructing pretty much from scratch a Halli S20R. The original speaker and output transformer were gone and a lot of the wiring had been creatively reorganized when I got it. I have it running, but have some questions about voltages.

The manual says that the original speaker field coil was something like 1200 ohms. This also served as a series choke for the plate and (through a divider) screen supply. The power transformer is 800 vct (looks original) which yields about 425 volts on the first filter. When I put a 1200 ohm resistor in the path to the second filter, I get about 330 volts at the second capacitor (which feeds the output and i.f. plates). This seems like an awful lot for the 6F6 and 6SK7's. This circuit also draws about 75 mA, which seems excessive. I tried a 2.4k resistor in the chain, which brought the B+ down to about 275 volts, but I read that 6SK7's (i.f. amps) in fact like 250 volts. This circuit still draws about 70 mA.

I guess my question is if anyone knows what the plate voltage (either on the 6F6 or any of the 6SK7's) should oughta be in this unit.

Go with an ARCO 466 or 467 and pad it with parallel silver micas. It will take some experimenting. The largest mica compression caps I have ever seen were 2700pf and had a 1/8" tuning shaft. Danny Stevig had them a few years ago.

Source record: 120772
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

I have the "mortal remains" of a stripped-out Heathkit SB-102
sitting in my hamshack, taking up valuable space. It has been
heavily stripped, but there are a LOT of good parts left for
the Heath repairer/restorer.

THE FOLLOWING PARTS ARE ALREADY GONE:

Cabinet and front panel
panel meter (face was broken anyway)
LMO unit
main VFO dial (was shattered anyway)
all knobs
all tubes
PA tune/load caps
PA tank coil
both relays
driver tune caps
many of the tube sockets
power supply connector
RCA jacks
drive belts (weren't any good anyway)
some crystals
CW filter
random small parts

There are still LOTS of small parts, including the coil-pack boards,
some of the crystals (I don't recall which ones), etc.

I will give this away for free to someone who needs it. Maybe you
can trade me something that I need some day. First person to request
it, gets it. You pay the shipping charges via UPS.

Steve!
have you ever tried to use multiple smaller value capacitors in
paralell?
In 2m and 6m power amplifiers I used 3-5x 100pF and varyed the value by
removing or increasing the amount of capacitors, I have also applied
this
for 80m QRP transmitter

I have a 1943 Army Signal Corp. Frequency Meter Set I-129-B (Absorption Type).

It is made my the James Millen Mfg. Co, Malden Mass. and consists of four individual absorption meters in a fitted olive drab metal box. These are the large, field type meters and cover 1.5 MHz - 40 MHz overall. The meters are in nice shape and the box is in good shape also except it has some masking tape residue and one partial label on it. Nothing bent or broken or missing.

Asking $60 plus shipping from zip 93401.

Assuming that you have already tried tube substitution and resistance and voltage checks to no avail, what I would try is disconnecting the ALC line from the finals, let it warm up about a half hour or so, and try it on transmit. If you have full power than it must be a bad component in the ALC circuit between the finals and the driver and any other circuit that is regulated by ALC voltage. Sounds like a capacitor in the ALC line is shorting to ground. When you find and fix the problem, post your findings so we all can learn from your experience. 73

1nF = .001uF = 1000pF

Thus the original poster, philip de cadenet, is looking for something
with 5000pF and 10,000pF (ie .01uF) capacity.

While these do seem rather large for even 160Meter equipment, there is
no way you will find them in 2M equipment. Considering how large in
capacitance they are, I do believe that they will be hard to come by.
Which is precisely why this isn't a run of the mill question.

From: "A. B. Bonds" <ab@vuse.vanderbilt.edu>
Message-ID: <336111AA.305E@vuse.vanderbilt.edu>
Source record: 120786
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I have a wretched pitiful Halli S20R that I have been resuscitating for about a month. At this point, it's become a matter of principle (see recent post, "For Sale, S20R, rusty cabinet, crummy dials, missing about half its parts, $750). At least the knobs are good....

So it is almost in satisfactory working condition, but it would not pick up WSM (our local Clear Channel, home of the Grand Ole Opry) worth anything. That's bad.

Turns out that the primary in the BC band antenna transformer coil is open. I am looking for a replacement. It is Halli part # 51B230, Band 1 (BC) Antenna Transformer, and is probably common to anything from the S20 through an SX62, certainly used on the S40 series. If anyone has a junker they'd be willing to search for a transplant I'd be grateful. Alternatively, any suggestions for a trick to get around the problem would be welcome. At present, I am simply bypassing that transformer with a 0.05 uF cap, which doesn't work too badly.

3447. Military Loud Speaker LS-3, what are its specs?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-26 00:00:00 UTC
From: jphipps@aztec.asu.edu
Message-ID: <5jtdif$k6v@news.asu.edu>
Source record: 120648

I picked up an LS-3 a couple of days ago. Quite a heavy beast, in apparently good condition.

I'm reluctant to open it up, as the paint may chip around the screw area. Am hoping to use it in conjunction with a BC-348Q.

Does anyone have info on the impedance of the thing, is there a line-to-speaker transformer inside, etc? Electrical input appears to be via a standard 1/4" tip-sleeve telephone jack.

Any info will be appreciated.

3462. Great Manual Source

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-26 00:00:00 UTC
From: edrk@ix.netcom.com
Message-ID: <5ju08p$eba@sjx-ixn6.ix.netcom.com>
Source record: 120663

...For a list of manuals on many pieces of boatanchor receivers and transmitters, at bargain prices ($2, $3, $4, & $5), send a stamped, self-addressed envelope to:

Donald P. Beehler
456 Bennett Street
North Tonawanda, NY 14120

He puts together a package of whatever he has available, professionally copied, and spiral bound. I understand he makes the rounds of whatever hamfests take place in N. NY.

I am NOT affiliated with him in any way; just a happy customer.
Also tired of seeing postings for manuals here that are out of sight.
73.
Ed K3PRE

3463. National Receiver F/S

Newsgroup: rec.radio.amateur.boatanchors

Source record: 120664

I have a national NBS-2 general coverage receiver for sale. It is in real nice condition. Looks good and plays real fine. It covers from 540 kc to 30 mc. The price is $350.00. I will not ship it as it is about the size of a super pro and weighs just as much. This is in a cabinet. No manual. I am located on Long Island about 25 miles east of New York City.

3466. Trade: TMC GPR-90

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-26 00:00:00 UTC
From: tony@bright.net
Message-ID: <5ju3c0$983@cletus.bright.net>
Source record: 120667
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

For Trade:

Technical Material Corporation GPR-90 receiver, circa 1956. This receiver is in excellent cosmetic condition (just a few white scuff marks on the cabinet) and it works very well. It is a general coverage receiver, with amateur bandspread, and was built to the highest standards of quality.

I wish to swap for Drake gear, especially for a TR-7 station, a R7A receiver, R-8 receiver, or any Drake commercial receivers (DSR-1, DSR-2, etc.). I can deliver the GPR-90 to Dayton, or can arrange for shipping.

Thanks!

73,

Tony N8SNC

Hi Ed - There is an email list devoted to CW. I'm including the subscription instructions below.

ZUT!
Jeff KH2PZ / KH6

Welcome to the cw mailing list!

Please save this message for future reference. Thank you.
If you ever want to remove yourself from this mailing list,
you can send mail to <Majordomo@qsl.net> with the following
command in the body of your email message:

unsubscribe cw your@email.address.here

If you ever need to get in contact with the owner of the list,
(if you have trouble unsubscribing, or have questions about the
list itself) send email to <owner-cw@qsl.net> .
This is the general rule for most mailing lists when you need
to contact a human.

****

CW is a mailing list (reflector) devoded to CW (International Morse code)
use in amateur radio activities. In particular, we encourage conversation on:

* Learning and teaching CW (tapes, programs, etc.)

* Keys, bugs, and keyers

* CW detection and receiving (filters, DSP, coherent CW, etc.)

* Breakin (QSK) equipment and skills

* Signal shaping and quality

* Portable CW operating issues

* any other non-inflammatory issues re CW

To be added to the CW mailing list, send email as follows:

To: list-request@qsl.net
Subject:

Body: subscribe cw

To be deleted from the CW mailing list:
send email as follows:

To: list-request@qsl.net
Subject:
Body: unsubscribe cw <your email addr>

To post items to the reflector, send email as follows:

To: cw@qsl.net

If you hve any questions or need assistance contact:

k7gt@qsl.net

See you on the reflector AND on the air!

73 es GL de K7GT

Believe the best radio rallies for components to old and new projects
are Weinheim VHF meeting in 3rd hole week-end of september and RSGB VHF
meeting in February. Very much russian equipment and also old Eastern
German eqmt is seen there. Hannover in November meeting is also good.
prices in hannover is much lower than in weinheim! Also some good in
PA&#65533;, but what about us who can only speak English or German? Any other?

I have an excellent condition Kenwood station for sale or Trade,
consisting of the following:

TS-140S HF Tranceiver General coverage receiver. Excellent condition
with boxes manual cables and hand mic.

AT-250 automatic antenna tuner. built in SWR meter and 4 position
antenna switch. Automaticly changes bands with the 140.

PS-430 matching power supply for the 140.

SP-430 matching speaker for the 140.

All gear is in excellent condition and NON SMOKER. The rig has never
been mobile, and I am the original owner.

I am interested in trading the above station for a
Kenwood TS-940S/AT (8mill serial number plus),
Kenwood TS50 and AT50,
Ten Tec Omni V
HF Linear etc....
will sell the complete station shipped for $1000.

Thanks and 73's

This is just a thought, since I don't know the details of the R390A
circuitry, but if all the tubes mentioned were on an AVC line or some
other common grid bias line, and that voltage were to go positive
enough to cause the tubes to conduct mightily, then you'd be putting
more than the normal voltage on all your plate resistors at the same
time.

3490. Radio Auction Report - Downingtown, PA (Apr 26.)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-27 00:00:00 UTC
From: "John H. Dilks III" <oldradio@worldnet.att.net>
Message-ID: <5jvu4l$cng@mtinsc04.worldnet.att.net>
Source record: 120604

To all, Auction Report - Downingtown, PA (Apr 26.)

It was a great "Social Event" for me and a great Auction for the buyers. The quality of many radios were exceptional and they commanded very high prices.

Two very "BA" pieces were a "Pre ARC-5" piece and a Wells Radio with a US New Jersey label.

About 200 attended overall and at the end (6 hours later) 50 of us closed the place.

You can see most of the results on the NJARC Web Page:

http://www.eht.com/oldradio

And if you want to see why I haven't been on here too much lately; I started a home page for my town. You can see it at: http://www.eht.com Please visit it.

Oh yes -- I did pick up one "g-o-o-d-i-e". A 1920 callbook with all US Amateur stations, plus ship and land stations and some foreign.

I didn't reply to the spam resistant address. I replied to the other one.
It bounces. dawt? or daht? wt bounces. Anyway I would like to buy the rig
for $70.00. Thanks gpewitt@execpc.com

looks to me like the e-mail you are trying to figure out is...
bry@mnsinc.com

3496. Re: BA newsgroup...What is it for?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-27 00:00:00 UTC
From: dl278@cleveland.Freenet.Edu
Message-ID: <5k01ck$nte@alexander.INS.CWRU.Edu>
Source record: 120610

I agree heartily. Part of the reason for this group R.R.A.BA
was to have a place to postr BA wants/for sale because it
was hard to find them on R.R.Swapo.

I've been around on usenet probably as long as almost anyone
as I did it at work way back in the ARPANET days and before.

I don't care what those "purists" say... ignore them. All the
same, I don't post ads/wants to other R.R. groups except
R.R.Swap nor to Rec.antique.radio-phono as it tends to
draw flames from self-important twits and in some cases
automated flames from same.

Single (1) used 3-500Z. Last-used performance data:

Ig = 0.115A fixed
Ip = 0.32A
Vp = 2450V
f = 14MHz
Po = 425W

Your measurements or application results may vary from this.
Make offer, and include about $5 in that offer for shipping UPS/USPS ground.

A friend of mine is looking for an attenuator made by Bird, which attenuates from
3 kW input to 1 kW output, 50 ohms.

This particular attenuator is part of the shelterized URG-2 HF installation from Collins.

If you have this attenuator and want to sell it, please respond to:

Message-ID: <19970427225800.SAA13161@ladder01.news.aol.com>
Source record: 120623

It is truly disappointing to see such an ill-informed and unduly alarmist message such as this especially when the sender identifies himself as a teacher.

Proposals for new auctions regarding spectrum - amateur and otherwise - are well publicized in advance and require formal public input. Additionally, both FCC, the NTIC and relevant commitee members of the US Congress have already gone on record in support of amateur radio and have also declared far greater study requirements before any additional spectrum is auctioned. PCS and LMDS pose absolutely no threat to amateur radio although there is a question of some ham assignments in some way. These are in the good and capable hands of ham radios only public advocate - the ARRL. That is not enough, though. Hams across America must take the time to learn the FACTS - not this ridiculous inuendo - and keep their clubs, congressmen and ARRL Division leadership informed of their interest and opinion in this matter.

If anything is a threat to amateur radio it is the perception by members of the public at large that we are a bunch of lunatics and half-baked anal retentives.

Hi, Paul. There are indeed TWO trimmer capacitors in the oscillator stage. The proper caps to set frequency are the variable caps located toward the back of the set. The variable capacitor banks toward the front of the set are used to get the dial to track throughout the sweep of the dial. See if you can't find a writeup on "three point dial calibration" in a book such as the "Radiotron Designer's Handbook" as republished by RCA.

I have had a lot of trouble calibrating the top band. Seems the RF and mixer stages want to peak at the image frequency, not the intended frequency as shown on the dial. Haven't found a solution so far.

BTW, the oscillator should be aligned ABOVE the indicated dial frequency (by 455 KHz) on all bands except the top band. The top band should have the oscillator set 455 KHz BELOW the indicated dial frequency.

All coils are adjusted for peak, inductors set for the low part of the dial, caps adjusted for the high end. The antenna should be fed with a 400 ohm impedance (this will make a difference).. could be a 400 ohm pad, or I use a TV 75-300 ohm coax to twinlead adapter.

DIAL settings for each band:

high low
1 1.5mc .6mc
2 3 1.8
3 5.4 3
4 10 7
5 20 12
6 36 24

Good luck. I hope you were able to get the crystal filter aligned. It is trick, but it really works when it is properly aligned.

The primary winding is not all that critical as to the number of turns like the secondary (which is tuned). Try winding several turns of magnet wire over the seconday in place of the open winding and you should get enough coupling to make it work.

3521. Mystery of the burnt plate resistors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-27 00:00:00 UTC
From: davidb@scn.org
Message-ID: <E9A1vo.FMp@scn.org>
Source record: 120678

At long last, I've been able to get back onto the task of repairing my R-390A. Symptoms are: white noise everywhere, no stations anywhere, IF subchassis checks out good.

So I pull the RF subchassis and take a look. Nothing obviously wrong, so I figure I'll start checking resistors. Everything tests OK until I get to R216, which measures LOW (in the low hundreds of ohms, when it should be 2.2K). A close look reveals that that it is charred-looking. Subsequent inspection finds the same things to be true about R219, R212, and R205; in one case the charring is _very_ bad, almost to the point of the resistor being a cinder.

All of these resistors go from the switched RF-IF B+ line to the plate of a tube, and all are bypassed to ground on the plate side by a .005 uF @ 1KV ceramic disk cap. I've replaced all except R205 so far, and each time I remove the charred resistor I feed about 400 volts DC (higher than the normal voltage the cap would see in operation) into the capacitor and check for leakage. So far, I haven't found any, and I'm at a total loss to come up with a failure scenario that would cause all four of these resistors to go. Perhaps some sort of overvoltage on the B+ (which, BTW, was within a few volts of the rated value when I checked it).

Any ideas? I don't want to put it back togeher just to see the new resistors char.

: Cosat Mesa, CA. Anybody know the specifications?

Ah, that's one I have a data sheet for.

7 kHz wide at -3 db, 19 kHz wide at -60 db, centered on 500 kHz

Needs a 130 (orange) 140 (yellow) or 150 (green) pF cap in series
with the input and output to resonate - should be colorcoded on each end.

Source resistance + 1000 ohms, load = 330 ohms. The input is the
short side of the flange.

Insersion loss 16 +/- 2 db.

Hello Guys:

Here's a few items someone may be able to use.....all prices are
in USA Dollars...and SHIPPING is Extra.

Please email me at radiorob@serix.com to reserve any of these items.

##

UNBUILT Eico Kit. Model 221 VTVM Vacuum Tube Volt Meter. Brand new in
the box!! Box has been opened and box is in VG Shape...a few tears.
Rest of kit is in original sub boxes, is unbuilt, and includes all
parts plus the manual and warranty.

Please make me an offer on this .....I will accept offers in USA
Dollars, Audio Tubes,or I'm looking for the following items......

Drake MS7 Speaker
Drake WH7 Wattmeter
Drake RV7 VFO
Drake RV75 VFO
Antenna Tuner....heavy Duty
OLD Radio Literature
Heath Tener Lunchbox

I'll notify the winning bid by Email.......

##

QST 1930......Complete Year 12 issues in a Brown QST Binder. Books are
in VG+ Condition, Clean, and don't smell!! The Binder is like new!
This is a beautiful set of Early QST's.

PRICE .....$60.00 USA + Shipping
##

QST 1934.... Complete Year 12 Issues. No Binder. Books are in VG+
Condition...but have some water staining and rippling. Not bad...still
a nice complete year. All covers in nice shape and attached.

PRICE.....$30.00 USA + Shipping
##

QST 1964....11 Issues....Missing May Issue. This is the 50th
Anniversary year of QST....and all issues have a continuing "History
of ARRL/QST" as the main Article.
All books are in nice shape and Clean.

PRICE........$15.00 USA + Shipping
##
ARRL....Hints and Kinks Volume 4......1949. Paperback Booklet
VG Condition.

PRICE.....Reduced to $9.00 USA + Shipping
##

That's it for this time around.....

I have a very nice vintage Collins RT-91 HF transceiver for sale.
Covers from 2 to 9 Mcs AM and CW @ 80 watts. Complete with manual.
Operates on 24 VDC. Somewhat rare and collectable. Built in 1945.
Works and looks very good. Asking $150 plus shipping.

Thanks,

Steve WA9FDZ (ex WB9KEV)

FCC Expected to Unveil Plans For Two Airwave Auctions

WASHINGTON -- Federal regulators are expected this week to set plans for two long-awaited auctions of valuable airwaves, including one for an emerging wireless technology that could bring new competition to the local-telephone and cable-television businesses.

Wireless operators, long-distance phone companies, electric utilities and telecommunications entrepreneurs are eager to bid for licenses to use huge chunks of the amateur radio spectrum to transmit voices, pictures and data.

Wireless Auction

Up for grabs: Licenses to use most of the amateur radio megahertz of electromagnetic spectrum in each of nearly 500 markets nationwide. Repeater frequencies are much in demand by those with the following: Uses: Transmitting voices, pictures and data via small, flat antennas that can rest on a windowsill. Expected bidders: All sorts of telecommunications companies -- but Baby Bells and cable operators will be barred from bidding on licenses in their home territories.

"While the auctions for PCS frequencies were very specific about how the frequencies could be used, rules governing LMDS usage are more liberal and for a bigger chunk of amateur radio bandwidth," said Michael Sprayberry, director ofwireless strategy for MCI Communications Corp.

New Radio Service

The auction rules have been delayed in recent weeks because FCC commissioners couldn't agree on what amateur radio spectrum would be available.

The technology operates with small, flat antennas that communicate with larger antennas mounted on towers. It has tended to work poorly in heavy rains and fog, but industry officials say they are working to fix the problem. Operators also could run into resistance from cities that increasingly are blocking the construction of new antenna towers. However ham towers could be seized as the FCC has decided that the amateur radio service no longer serves the public necessity.

Was it connected to something when you tried it? Some or all switching supplies require a load in order to function properly. People talk about it all the time in sci.electronics.repair, and I've had surplus switching supplies that I thought were bad until I put a load on them at which point they started working fine.

I've never delved into the why behind this. The times I've had it happen, there has been a little bit of activity on the output, but either short pulses or low voltage glitches.

Of course, if you're not certain about the supply, it might not be smart to put something important on it until you know it does work properly. In sci.electronics.repair, people keep mentioning using 12v car headlamps as dummy loads, though that might not be such a great idea for a 28v supply. FInd something similar that acts as a load, but can't be damaged by a bad supply.

I've also seen some switching supplies that include load resistors on the ouptut. I guess those are for lower current applications.

I also had a batch of surplus switching supplies that seemed to be bad, until I removed a zener diode on one of the output lines. It was meant to shut the supply down if there was overvoltage (it acting like a short above a certain voltage, and the supply sees it and shuts down). Turns out the zeners were shorted, and kept the supplies from working. I had three or four of the same supplies, and the problem was the same on all of them. I begin to think that maybe the diode was the wrong part, though I either didn't look it's part number up for details, or couldn't find it in the replacement guides.

Oh god,
I never thought that my original posting would start you guy's off, I'm

used to all this and have a good laugh on the cb ng.
I must admit that I would not of thought that anything 2m would have the necessary 5nf or 10nf trimmers inside so did'nt bother looking.
I do like the sense of humour in teaching the population of this ng the difference between nf & pf!
Seems anyway that I'm going to have to pad out the largest trimmer that I've found (3500pf), with some fixed caps.
I must look into this ng more often, I enjoy this kind of humour,

YOW!!!

>I think the microphone connector on the
>PSU/modulator unit was also a Belling Lee coaxial type. Perhaps
>Labgear had shares in Belling Lee!

Well, I worked for Labgear at one time, and one of their main
businesses was the manufacture of TV accesssories - pre-amplifiers,
pattern generators etc. They also made nice SSB military xcvrs
with a 10.7 MHz i.f.! Backpack jobs that were solid state and ran
about 10 watts best I remember.

No doubt they had plenty of Belling-Lee co-ax connectors for all the
TV stuff.

Well, it's taken us long enough to stop thinking uuF, and now it's
these funny nFs -- where will it all end? However, I'm sure I speak
for all Americans in saying we promise to start using nF if you all
will promise to start drawing your resistor symbols correctly instead
of as those little boxes. Deal?

I wish people would spell correctly. It's Eddystone NOT Eddiestone.

Anyway I have a 730/4 model which is general coverage and was widely used by the armed forces and monitoring stations. It has the long sliderule dial, BFO, noise limiter, crystal filter etc.. It is in good condition but not mint and works well.

The price is £200-00 plus shipping from U.K.

Regards

Simon

One of my 3 R390A's had a shorted bypass cap in this area.

I would do what you're doing, and replace the caps, they're cheap- much
cheaper than your time to re-fix this area in 6 months when the bad
cap shorts again.

Also maybe someone plugged in a bad or wrong tube into that socket,
or a stray bit of wire made a temporary short to ground in that area.
The possibilities are almost endless and you'll go crazy wondering
what went wrong and how the problem went away.

You might try running the radio for several days with the power on
(and the right sized B+ fuse just in case) just to see if the problem
resurfaces.

I have both a WE and RE 75S-3C, and have decided to sell the WE, serial
#10478, which has 3 filters, and is in excellent physical and
operational condition. It looks virtually new both inside and out. I
was going to bring it to Dayton, but decided to list it here on several
of the ham radio news groups. This radio is exceptional, and I will
sell it for the best offer over $1,750 plus shipping. This radio is as
close to "mint" as you can get without taking it out of the box when
new. I also have a "like new" 312B-4 WE to match this 75S-3C. If you
have sincere interest in buying this classic Collins receiver, email
me. If you send your phone number, I'll call you back to answer any
questions you may have. JB, K4JJ in Roswell, Georgia

I am looking for a SX-101A and the matching transmitter (a HT-37 I
think)
in working condition and at a reasonable price. Can pick up in the New
England, Metro NY/NJ or Washinton DC corridor. Let me know what you
have, the price and condition.

Thank you for reading this. Reply to: srimsa@eclipse.net

I have both a WE and RE 75S-3C, and have decided to sell the WE which
has 3 filters, and is both in excellent physical and operational
condition. It looks great both inside and out. I was going to bring it
to Dayton, but decided to list it here on several of the ham radio news
groups. This radio is exceptional, and I will
sell it for $1,750. or best offer plus shipping. This radio is close to
"mint". I just hate to part with it, but I have too much invested,
dollars and space, in Collins S-Line radios. I also have a "like new"
312B-4 WE to match this 75S-3C. If you have sincere interest in buying
this classic Collins receiver, email me.
If you send your phone number, I'll call you back to answer any
questions you may have. JB, K4JJ in Roswell, Georgia

That does sound very high. You might check the filament voltage. If it is
20% high, then your B+ will be also. If the filament voltage is
high, then maybe the transformer was intended for 105VAC operation or
so. Are there any taps on the primary for selecting other line voltages?

This circuit also draws
> about 75 mA, which seems excessive. I tried a 2.4k resistor in the
> chain, which brought the B+ down to about 275 volts, but I read that

I used to have the same problem with my SB-102. The only solution I found that was reliable was to run a muffin fan on top of the final amp compartment and keep things cool. Try this and you will have no more problems!

1997 CONNECTICUT QSO PARTY - OPERATING RULES

Connecticut QSO party, sponsored by the Candlewood ARA, 2000Z May 3
until 2000Z May 4, with a rest period 0400Z - 1200Z. Phone, RTTY and CW.

Work stations once per band and mode, mobiles as they cross county
lines. No repeater QSOs.

Single operator, fixed/mobile, Novice, QRP(5W), Multi-single
Multi-multi
classes plus Connecticut club competition.

Connecticut stations may contact other Connecticut stations for
QSO/multiplier credit.

Connecticut stations exchange report and county; others exchange
report
and state/province/DXCC country. Non CT stations work CT stations only.

CW - 40 KHz. up from lower band edges; Novices 25 KHz. up from low
end;
Phone - 1.860, 3.915, 7.280, 14.280, 21.380 28.380. VHF - 50.150,
144.200,
146.580. RTTY - Normal RTTY Bands . All bands (HF,VHF, UHF) except
WARC bands count.

Score one point per phone or RTTY QSO and two points per CW QSO.
QSOs
with club station W1QI and ARRL HQ station W1AW count 5 points.

Connecticut stations multiply QSO points by states/
provinces/Connecticut
counties worked (DX only one multiplier); others multiply by Connecticut
counties worked (work CT stations only).

Plaques and certificates (100 point minimum). Special certificate
for
working all 8 Connecticut counties.

Send entry and SASE for results by June 3 to CARA, P.O. Box 3441,
Danbury CT 06813-3441

Hello folks,

This is slightly off the beaten path, but I recently unearthed a 1952 color newspaper ad from the Western Auto stores highlighting their radios. One large standup and several smaller ones. If any collector out there is into the all american five or pictures of uncommon broadcast sets, advise as to interest.

Still for trade: Heathkit HX-11, fairly rare novice xmtr.

Still looking for RTTY stuff.

73, Doug W5JV

Message-ID: <3364E615.2@ford.com>
Source record: 120572

I have an Eico vacuum tube voltmeter, model 235 (?)...
still works like a champ after all these years.

Anyway, over the years the white printing on its Uniprobe
has worn away, and now I am at a total loss as to which
switch position (on the probe, where you rotate it one
half turn) is which (i.e. AC/OHMS or DC). Does anyone
know how to determine which position is which, say, by an
external measurement from the probe tip to the plug, so
that the probe would not have to be disassembled...? I
would like to reidentify the two positions, and wanted to
make sure that I did so correctly.

Thanks in advance...

C.K.

3567. HQ-170 S-meter drawing available

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-28 00:00:00 UTC
From: dhall@jps.com
Message-ID: <336405af.31731188@news.ipass.net>
Source record: 120634

Hi all,
Recently I acquired a Hammarlund HQ-170. As with many Hammarlund receivers of this vintage, the S-meter had turned brown. I suppose this happens due to UV breakdown, but whatever the reason, it detracts from an otherwise fine looking receiver. I took the discolored meter face off and scanned it, and, using the old one as a guide, traced a new one on my PC with Corel Draw. I then laser printed this on paper with an adhesive back (Crack-n-peel) and applied it to a new S-meter plate I cut out of a sheet of translucent plastic. The result looks quite good. The S-meter is back to its original white which matches the clock and dials nicely.
If you're interested in a copy of the S-meter drawing and can receive attached files via email then drop me a note at dhall@jps.com and I'll mail you a copy in Adobe Acrobat format. The file is around 40K bytes in size. I believe it could be used on some of the other HQ series S-meters as well, but since I don't have any Hammarlund receivers other than the HQ-170 I'm not certain.
I'm now in the process of re-creating the tuning dials and S-meter for a National NC-173. (They turn brown with age like the Hammarlund S-meter) This is a bit more involved, since there are two colors (red and black) involved. When I'm done I'll be happy to share them with anyone who is interested.
73,
Doug Hall, KF4KL

Hi All!
I have for SALE:
HEATHKIT CHEYENNE mobile TRANSMITTER w/manual, EXC. CONDX,
No power supply of any kind. Appears to have been used very little, if at
all!
All complete, no noticable mods or holes, right knobs, etc.
Price is $40 plus shipping from NY.......Thanks es 73......RICH
RLUCCH2098@AOL.COM

3577. Schematic needed of an National HRO 50R

>

The probe has an high value resistor (my Heathkit has a 1 meg) that is shorted out when you flip to the AC/OHMS position. Set the meter to read ohms, short the probes and switch from one position to the other. The AC/OHMS position should show zero ohms, while the DC position will read a high value.

3580. Info on Lincoln L-2754 "6" Meter radio, by Allied?

Newsgroup: rec.radio.amateur.boatanchors

Hello,
Have recently picked up this radio and would like any information you might have about it. It was apparently made by Allied Radio Corp. and is a Lincoln Model L-2754 "6" Meter Amateur Band Transceiver. Any info would be appreciated.

Hello and thanks for your time.
I have recently aquired a Hallicrafters S-38-C that needs some help.
This will be my first restoration project so would appreciate any imput
or advice. When the radio is plugged in it lights up and has a loud hum
and nothing else. The volume/off switch will not turn it off and seems
to have little effect on the volume. Turning the band switch and tuning
knob also has no effect. Any suggestions on where to start? Any help
will be appreciated.

3583. HQ-170 AVC "pulls" freq?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-29 00:00:00 UTC
From: dhall@jps.com
Message-ID: <33656d2d.10083469@news.ipass.net>
Source record: 120575

Hi folks,
I have a problem with my HQ-170 when using AVC. Strong signals tend to "pull" the receive frequency somewhat. It's most noticable on CW. I'm pretty sure that it doesn't happen on AM, but a small change in frequency doesn't really affect AM reception that much anyway, so I'm not certain. With the AVC off signals are stable in frequency regardless of the RF gain setting. I checked the BFO tube tonight and it checked bad (low emission) so I have to replace that, but the BFO still works. Could a tube with low emission cause such an effect? The regulated +105v line seems OK, and doesn't change with AVC voltage. I believe that the AVC voltage is causing the problem somehow, but I'm not sure where. Has anyone seen this problem before? Could a leaky cap cause this? Many of the old caps have been replaced, but all the disc bypasses are original.
This is the last thing I need to fix in order to be finished with this receiver. If you can offer some advice I'd sure appreciate it.
73,
Doug Hall, KF4KL

Sat May 3 in San Luis Obispo a bunch of Mil itary Radio collectors, users, fans, and fixers will get together for an all day conference with swap and BBQ. This is the last heads up I'll post as time is gettin' teet. Camp San Luis Obispo NCO Club, $2 for the conference and swap, $7(optional) for the BBQ. BBQ= tri-tip(steak), chicken, chilli beans, garlic bread, green salad. Best part is a buncha tube radio oriented radio folk sharing info and the day. Hope to see ya there! email if more info needed.

Prices include shipping in Lower 48.

MEDA uMAG-02WB Handheld, battery-operated digital fluxgate magnetometer. Sensitivity: +/-0 - 20.00 - 200.0 - 2000 milliGauss F/S, DC-400 Hz (-3dB @ 400 Hz ref to DC). Analog output +/- 2.000 V F/S. Linearity .02% or better. Absolute accuracy +/- 0.5% or better, traceable to NIST. With 10 meter cable and transverse probe, 6 spare batteries in storage case, multiple-battery harness for up to 8 batteries (approximately 12 days continuous operation), analog output cable w/BNC (to oscilloscope input), manual, calibration certificate, transit case. In new condition. Current price from manufacturer is $900. Sell at $500.

WALKER SCIENTIFIC 3D1. Handheld, battery-operated digital fluxgate magnetometer. Sensitivity: +/-0 - 20.00 - 200.0 - 2000 milliGauss F/S, DC-100 Hz (-3dB @100 Hz ref to DC). Analog output +/- 2.000 V F/S. Linearity .02% or better. Absolute accuracy +/- 0.5% or better, traceable to NIST. With 6 foot cable and axial probe, carrying case. Almost-new condition, $350.

DEXSIL MAGNUM 310. Handheld, battery-operated, micropro-cessor based 3-axis digital induction milliGaussmeter. Auto-ranging; 0.04-9.96 milliGauss (+/- 2%), 10 - 99.6 milliGauss (+/- 5%), 100-996 milliGauss (+/- 5%), 1.00 - 10.0 Gauss (+/- 5%) for 60 Hz signals in 60 Hz mode. F/S accuracy in 3rd harmonic mode is +/- 5%. In braodband mode (40-310 Hz @ -3dB) accuracy is +/- 10%. Displays all three vector components plus resultant or resultant only. Has low battery indication and automatic shutoff. Fully self-contained. WIth carrying case, manual and calibration certificate. Used, very good condition; $250.

MERLYN & NIMUE 900. Handheld, battery-operated single axis digital induction milliGaussmeter. 4 ranges; +/- 0 - 20.00 - 200.0 - 2000 milliGauss - 20.00 Gauss F/S. +/- 2% all ranges except 20 Gauss (+/- 5%). -3dB 20 Hz - 1.5 KHz. Fully self-contained, w/carrying case. Used, excellent condition. $125

LEEDS & NORTHRUP SERVO RECORDER 136-304-304-304-00-00-00-L0088-L0088-L0088-6-BV-000. Three-channel servo recorder, modified for potential inputs. Can be internally adjusted from +/- 1 millivolt F/S to +/- 2V F/S. Set at +/- 1V F/S. Chart speed @ 60 Hz 2cm/hr or 2 cm/minute (at 50 Hz = 1.67 cm/min or 1.67 cm/hr). Internal line voltage selection for

100/120 V, 220 V or 240 V. Power burden: 27 VA. Power input; 3-wire IEC connector. (Uses standard IEC cords). With 2 sets spare pens, 2 boxes charts, a few spare parts, carrying case; Used, good condition; $150.

UNIVERSAL IEC LINE CORD SET. Each 6-foot line cord has a standard female 3-wire IEC connector at one end, and a male connector at the other; one of each from the following list:

Australia 3-pin w/ground male pin
Denmark 3-pin w/ground male pin
Europe 2-pin w/ground female & strap
India/South Africa 3-pin w/ground male pin
Israel 3-pin w/ground male pin
Italy 3-pin w/ground male pin
Switzerland 3-pin w/ground male pin
United Kingdom Fused 3-pin w/ground male pin
USA/NEC/Japan (100/120V) 3-pin w/ground male pin

One of each of the known electrical connections in the world; 9 cords in carrying case, NEW: $100

> competition to the local-telephone and cable-television businesses.This service was recently licenced to three Canada wide companies..Cellularvision, Regionalvision, and Maxlink (Digitalvision). The network is a cellular point to point system operating in the 28 Ghz range and is designed to provide bi-directional telecom, cable tv, videoconferencing, and internet/data services to homes and businesses. Each of the three companies in Canada has a licence for a 500Mhz band. As of today, two test "cell" sites are operating in the Metro Toronto area. The system is based on the NY City "Cellularvision" technology, which has been in use in NYC for a few years now to deliver wireless cable tv (MMDS) service. This does not, in any way, affect the ham bands.

Greetings,

I'm looking for a mid-50's Hallicrafters Amplifier, Model HT-31. This is the companion Amp to the SX-100/HT-30 pair and was also sold as a component of the original SR-500 Console. Of course I'd take an SR-500 Console if there are any of those around! :-)

Thanks and 73.

Message-ID: <5k5gs0$j6p$2@nonews.col.hp.com>
Source record: 120590

Single (1) used 3-500Z. Last-used performance data:

Ig = 0.115A fixed (held fixed... you can drive it harder if YOU want to)
Ip = 0.30A
Vp = 2450V
f = 14MHz
Po = 425W

Your measurements or application results may vary from this.
Make offer, and include about $5 in that offer for shipping UPS/USPS ground.

-Mark K0EX

I have a Hammarlund HQ180, which has several rust spots on the front panel. Does anyone know someone that refurbishes these, or have info on doing it yourself?

Thanks,

Doug

3602. HEATH SB-313 LMO Problems

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-29 00:00:00 UTC
From: timcook@erinet.com
Message-ID: <336681f7.13089062@news.erinet.com>
Source record: 120594

I have a heathkit SB-313 shortwave receiver that seems to have an LMO problem. Tuning in the AM mode the audio is real scratchy (like a dirty variable cap) In the SSB or CW mode, the tuning is real critical in that the signal "warbles" while tuning, but when you settle on a freq, it sounds fine. Is it possible to remove the LMO, open it and clean it? There isn't a whole lot of info on it in the manual. Is it a perm tuned osc like Ten Tec uses, or does it utilize a variable cap? Thanks for any help
Tim

Source record: 120595

I found this at rec.radio.swap... I guess I was wrong about
the collectibility of Sprague TVLU capacitors (at least for
now, anyway). Check your junk parts box; you may be sitting
on a gold mine... <sarcasm>

If you don't think this is a relevant post, think about it
the next time that one of your older pieces of gear breaks
down -- will money speculation taken to the most ridiculous
and stupid extremes (for crying out loud, even obsolete parts
are now "collectible"?) make it cost prohibitive to repair
it...? Are you going to want to hit that power switch with
the thought that one of the tubes inside is a rare, precious
antique, and if that tube fails, your only hope is some guy
out of state who has a box full that he's sitting on, because
the going price has not risen high enough for him yet? AES
is already floating the prices on several tubes because of
this.

All of you money-grubbing "collectors" are destroying the
electronics/radio hobby... take your speculation greed to the
financial markets, where it belongs.

> problem.

Problems with the Heath LMO's are generally related to (1)the wiping contacts on the tuning cap getting a bit crusty with age or (2) the bearing adjustment at the rear of the cap loosening up. In the first case, a little Deoxit or other similar product will take care of the problem. And the bearing tension is adjustable.

The LMO box can be opened. As I recall, there may be a couple of solder connections that have to be released to do so, but its fairly straightforward.

Tube Manuals, Tube Substitution books, Service Manuals, QST magazines, much more. Now over 1550 different tube types in stock - E-mail Rog42@aol.com and ask for my latest RADIO list - #426-T.

3610. Re: HQ-170 AVC "pulls" freq?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-04-30 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseE9FM86.IHq@netcom.com>
Source record: 120456

Is there a pentagrid converter tube with AVC applied to its signal
grid? Supposidly, these are designed to minimize local oscillator
"pull" (which will show as your freq pull). Maybe try changing this
tube to see if the problem goes away/ lessened. A tube tester probably
won't spot a tube with good emmision, but bad internal geometery.
It may have been manufactured innacurately, and quality control
didn't catch it.

The Davilyn Corp. in North Hollywood, CA has your relay; P/N 60-262842.
It is priced @ $40.00. They also have a complete line of transmitting
tubes and components for large amplifiers.

Their order # is (800)235-6222, or visit their web site @
www.Davilyn.com/Electronics. They are nice folks to do business with,
and publish a very nice catalog.
(((73)))
Phil, K5PC (I'm just a satisfied customer; no ties with them)

Message-ID: <19970430103001.GAA22867@ladder01.news.aol.com>
Source record: 120461

You didn't mention what type of problem you were having but mine suffered the exact problem that Grant mentioned. Just be careful with whatever cleaner you use as the LMO is real sensitive. As I recall, there is a mechanical stop system which sets the end to end range of the LMO and in turn sets the frequency range. If you get this out of alignment you will have a devil of a time putting it back. (this is the voice of a bad experience). The LMO came as a sealed, pre-aligned assembly from Heath.

3616. More 390A Parts Out There

Source record: 120462

I had a nice chat today with George Rancourt, the chap who advertises 390A modules in Electric Radio. He has been a good source of data for me on R-390A contracts (see Tom Badger's Millist page HTTP://telalink.net/~badger/millist/index.html

Seems he recently acquired about 100+ rigs from a successful bidder at the St. Julian's Creek sale. He says the rigs are about a 7 condition (better than originally thought), and most work when the missing tubes are replaced.

He checks the modules before sending them out, and has a few modules (like RF decks) for hardware parts in non-working cond (ask for these specials).

He is also willing to sell whole rigs as is. Some have meters.

George can be reached at 413-527-4304 in Mass.

Hello,

Did anyone out there make it to the Little Rock, Arkansas hamfest this year?
The family and I rolled through that area, but did it just about 1 week
too soon. We made the Birmingham (Ala) hamfest about a week earlier but
missed the Little Rock meeting on April 26.

Would like to hear from anyone who attended!

73s,

Rog

I recently purchased a used Yaesu SSB FT-901DM for use on a sailboat.
Does anyone know of any good texts to help a beginner get started?

Thanks.

Ahoy Christian

For a discussion of SSB modulation go to URL:
http://wkweb4.cableinet.co.uk/simon.collings/Modulation/SSB.htm#SingleSideband

Also visit the Ham Help Pages at URL:
http://pw2.netcom.com/~ac6v/pageA.html#H

Be aware of course that you will need an Amateur Radio license to
transmit on the Ham Bands and Marine licenses for Marine band use.

> will be appreciated.

Start with replacing the filter capacitors. The hum is probably due to
defective electrolytic filter capacitors. In a set this old, the paper
caps are probably leaky also so it would be wise to replace all of them.
Sounds like you may also have a shorted on/off switch.

3634. Trade: Old tube audio amp for ham stuff...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-01 00:00:00 UTC
From: gekko95@ix.netcom.com
Message-ID: <5k92f7$sh6@dfw-ixnews4.ix.netcom.com>
Source record: 120480
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hi everyone,

I acquired an old tube amplifier some time back, and I am now
looking to trade it for something more along the lines of
my current interests. It just doesn't fit with all my old
BA / tube ham gear.

Here is the desription:

De Vry Model 2830 Tube Audio Amplifier (mono)
Serial number 4708

Transportable with removable cover. Cover contains a 12"
speaker with a leather flap that uncovers the grille. Flap
is in excellent condition, and snaps are intact. All cover
latches are fully intact and functional. Leather carry handle
is also in good condition.

Unit operates perfectly (I tested it myself using a microphone
and the volume is excellent with no hum or any observed
problems)

Tube lineup:

6J7 mic preamp, 6SN7 phono preamp, 6V6 driver,
pair of 6L6G's for output, and 5U4G rectifier.

Power level - approx. 30w mono

All ID plates intact and in good condition, original knobs.
1 of the 3 filter caps has been professionally replaced. Other
2 are original.

No modifications of any kind visible. Unit is overall in
extremely good condition. Speaker lead-in wire has been
updated, but the original plug connector is intact and
fully functional. Mic and Phono input jacks are 1/4".
In addition to the 'Main Volume' control, there is a
'Mic Volume' and 'Tone Compensator' control as well. The
metal label plate is silver with red circles for scales,
and the De Vry logo. Excellent condition. Great addition
for any 'tube amp collector'

I am asking $150 plus UPS, or trade for ham gear of equal value. I
am mostly interested in boatanchors - Heath, Hallicrafters, etc.
but I'm very open to ideas, as long as a similar value is there.

Specifically, I am looking for an SB-101, SB-401, Vibrokeyer non-iambic paddle for my HA-1, SB-110, SB-313, SB-620, or along these lines. Let me know what you might have to swap!

Thanks for any replies,

Dave gekko95@ix.netcom.com

3635. WTB: SB-401 and SB-101

Source record: 120481
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hello all,

As a continuing project to acquire the radios of my ham youth,
and dream rigs of the same era, I am looking for a good working
SB-401 with crystal pack installed, and a good working
SB-101, preferably with AC supply and maybe also a SB-600.

Not after museum pieces - just good working condition to put
on the air. The 101 was my first 'real' rig, and I always
dreamed of having a 301/401 line. I have since acquired a
fine 301, 600, 610, and 630. I just need a decent 401 to
complete my dream setup of the early 70's.

If possible, I'd like to stay around $100 on the 401 and
$150 or less on the 102. Am I out of line? Let me know!

Thanks,

Dave gekko95@ix.netcom.com

email price and condition to Dave WB7AWK gekko95@ix.netcom.com

3636. FS or Trade Heathkit, Johnson Viking Tuner

Newsgroup: rec.radio.amateur.boatanchors

I have a nice HW-16 Station for sale or Trade consisting of the
following

Near Mint HW-16 cw Xcvr with an original manual (not the one that came
with the rig). This rig looks like it was just built. It is one of
the later models with the crinkle finish. There is a slight hairline
scratch on the top of the case, that 3/4 of the way back on the left
side of the case, and is only 1 inch long. almost unoticable, but I
like to be completely honest. The final is a little soft, only
putting out 10 Watts, but I have a New in the box replacement final.
The righ works great, I had it on the air this past weekend, and
worked Europe and Canada with that 10W on 40m.

Price for HW-16: $150 Shipped

Nice condition HG-10B VFO. This VFO is not as new as the HW-16. It
has the smooth finish on the case, but is in very good condition.
Well built, and Runs very nice. I have a copy of the Manual for this
one.

Price for the HG-10B: $75 Shipped

Very nice condition Johnson Viking 275 watt Tuner. No meter with this
one. It works great with this station. Four very small(pin head
size) paint flakes off top of cabinet.

Price for Tuner: $90 Shipped

Will sell entire station Shipped for $295 or trade for other HF Rig
(TR4C/AC4, TS520S, FT101E etc) or Newer 2meter Mobile (FT2500m,
TM241A, etc.)

I am just in the mood to trade and try something different. Let me
know what you have to trade.

Thanks and 73's

David

Message-ID: <01bc55f5$985b4cc0$5445facc@philn3>
Source record: 120483

If the radio has been sitting unused for a long time,
the controls may just need a good cleanup. Take
the radio out of the cabinet and brush/wipe off as
much dirt as you can. Get a spray can of tuner
cleaner/lubricant at Radio Shack. Shoot some
cleaner inside controls and switches such as
the volume control and bandswitch, then operate
them for a minute or two to clean things inside.

Shoot some cleaner at every bearing in the tuning
capacitor as well as the axle of each pulley. Then
(gently at first) try to free up the tuner mechanism
and (if it frees up) use it for a minute or two to let
the cleaner work its way into the joints. If the
tuner still doesn't work, perhaps you have a broken
or hopelessly slipping dial cord, which will need to
be replaced.

As long as you're cleaning things up, pull out each tube,
clean off its pins, shoot some cleaner down into the socket,
then seat and unseat the tube a few times to make sure
it's connecting well.

There's plenty more you can do to scrub an old radio, but
this sort of rough-and-ready hosedown will often eliminate
problems caused by simple grime.

Loud hum usually signifies a bad capacitor in the power
supply, something that's easily fixed by replacing the blitzed
unit(s). As long as you're at it, replace other suspect capacitors
with modern units with equal or greater voltage ratings.
Better safe than sorry!

You can find more advice and repair info/suppliers
in this area of my website:

http://www.accessone.com/~philn/begin.htm

While you're at the site, you can check out the photos and info
about my Hallicrafters S-40B and a couple of other boatanchors.

Good luck!

On most VTVM's, the "DC" position inserts a 1 Megohm resistor
in series, right at the probe tip. The VTVM's input is 10Meg,
thats why the VTVM is listed at 11 Meg input resistance.

On AC/Ohms, the resistor is shorted out by the switch. Otherwise
the ohms function would always read 1 meg too high.

The easiest way to find the right position is to put it on
"Ohms", X1 range and short the probes together. You should read
infinite resistance with the switch on "DC", zero ohms (or close
to it) with the switch on "AC/Ohms".

What's also interesting to see today are the _very_ politically incorrect and borderline racist magazine ads that Hallicrafters ran in the 1940s and 1950s... the exotic stations that could be picked up by the S-40 (as well as the DXpeditions) _always_ seemed to be in Africa back then. Pictures of men holding spears with bones stuck through their noses and the whole lot. Really sad...

HELP! - I lost the address for the Ham Trader Yellow Sheets.
Please email me with the address.
All I have is the old winter address in Florida.
P.S. If you know of another place to post an ad I would be grateful.
Thanks,
John N7MTB

Hi All,

I have a Yaesu FT-747GX to sell. Covers .5-30 mz, all-mode AM,CW,SSB, and FM with optional accessory. Its "as new" in the box not a single mark on it. I would like to get $500.

BTW- I just got a old issue of CQ (1992) and there is a remote mounting mobile kit one can get for the FT-747GX.

I have a Hammarlund Sp400 to sell. The rig works very well and includes the original case and a super pro power supply. Condition is very good the only flaws are a couple of chips on the panel and two small knobs are not original(they are very close). Asking $250 or trade for later vintage BA RX or TX. Will deliver to Dayton on Saturday.

Hi gang,

I am still looking for a Heath SB-101 in decent working shape to complete my 'Radios I Used to Have' collection. The 101 was the first 'real' radio I had in 1975.

Doesn't need to be museum-grade, but should work well. Should have the AC supply, and would be nice if with an SB-600.

I'd like to stay in the $150 range, if possible.

If you have something along these lines, drop me a note. Send condition and price to:

Dave gekko95@ix.netcom.com

>
>Try putting a load on it then measure voltage.
>switching power supplys need a load.
>jarad

Yes, Jarad is quite correct. Try at resistor rated at 15 ohms max at
at least 25 watts. This should give approximatelly 2 amps load. Or
simply hang one of your 28 VDC military pieces of gear on it if it'll
pull enough current. My RT-66/PP-112/GR setup pulls 6-8 Amps and loads
one of my 28 VDC Kepco supplies very nicely.

Switching supplies require a 10-20% minimum load which allows the
switching control circuit to operate correctly. These are quite a
different animal than the old fashioned transformer/diode/capacitor
supplies.

Additionally, positively _never_ operate those typical computer
power supplies we see in our PC's with no load on the 5 volts. They
will quickly self destruct -spoken from the voice of experience. This
could have happened to your Lambda supply if the designers had not
done a good design on it to redice the risk of it smoking itself as
the crowbar circuit has done for you.

3656. replacement for paper cap

This is the cathode bypass capacitor for the output stage. Any
electrolytic cap at 10mfd @ 25 volts will do. It dosen't have to be
exactly 10mfd, any value close will work, as long as the voltage rating
is the same or higher.

3663. Re: Voltage info on Halli S20R needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-02 00:00:00 UTC
From: Robert Scarlett <scarlett@nanospace.com>
Message-ID: <336A7452.4DB@nanospace.com>
Source record: 120398
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Just recently saw your posting, so this is late.

I have a Hallicrafters S-40, which is essentially a repackaging of the S-20R for the post WWII market - before they had time to design something really new! I also have an S-20R manual, and the schematics are almost identical. The main differences are:

The 6SK7 RF is replaced with a 6SG7
The 6K8 converter is replaced with a 6SA7
The speaker field is replaced with resistors totalling 1470 ohms
There is a 10K resistor in series with the 6F6 screen

Your voltages seem too high. You might have the wrong power transformer, or the primary tap (if there is one) is connected for a lower voltage than your prevailing line voltage there, a good suggestion from a previous correspondent - check the 6.3 VAC filament winding to find out.

Here are some voltages I've been able to determine:

My S-20R manual specifies a power transformer with a high-voltage winding of 680V AC center-tapped. My S-40 manual specifies 660V.

By actual measurement my S-40 has about 280 volts at the filter output (across your C29), and about 130 volts at the screen divider (junction of your R32 and R31). Of course these vary as my line voltage wanders up & down during the day. Your voltages might be higher, but by no more than a factor of 680/660 = 1.03 i.e. 3 percent.

My 1954 RCA tube manual says that 6SK7 and similar RF tubes have 300V max plate voltage. The screen voltage depends on a number of factors, but 160V or less would be well within the ratings. The 6F6 output tube is rated at 375V max on the plate, 285V max on the screen. You may be exceeding the latter, in which case the life of the tube may be shortened (don't quote me on this). On my 6F6, the plate is 260V and the screen 240V, approx.

I added up all the 'typical' tube currents according to my faithful tube manual, and including the screen divider came up with about 75 mA total for everything. So your estimate is in the ballpark.

This is so late, you've probably resolved the situation by now. In any case, hope this has been helpful.

Regards, Bob Scarlett "REAL radios glow in the dark!"

Marc,
The performance might not be as good as a digitally synthesized radio, but it's a piece of history and deserves to be restored for its own merit. I have many boatanchors, plus a few transistorized SWL radios, and I still like the boatanchors best. Add to this the fact that they can only go up in value, at least until all the old timers have gone on, but I still have 50 years to go, and would like to impress my great grandchildren with something that is really old and still works as good as most stuff of the shelf. My Hammarlunds and Hallicrafters will never get sold.

Marc: A recent article in Electric Radio was very critical of the performance of modern "sand state" receivers. Granted the magazine has a strong bias towards tube and Boatanchors, but the conclusion was that many of our beloved BA's can hold their own with the modern rigs.

Hi everybody, I have a Collins 51J4 and desperately need the schematic diagram. If any of you got it and is willing to email(in any graphics format) it to me, or surface mail me I would be very happy. However please take under consideration that I live in Athens Greece, thus its impossible to find the schematic over here.

Thank you in advance.

today's
> Kenwoods,etc.? As good in performance?

Keeping in mind that a "boatanchor" can also be a mil-spec radio from
several yesterdays ago, this needs some qualification.

Where 'boatanchor" means "a consumer-intended radio from one or more
yesterdays ago" and where the "modern" radio is an up-converting superhet
from the TS-430S (1982) on, the answer to "as good in performance?" is no.

Where "boatanchor" means "a mil-spec radio from one or more yesterdays
ago," the answer varies with the modern and vintage radios considered, but
the modern consumer-intended radio often wins in all the operational
aspects that matter in most residential locations.

The boatanchor "thing" is not so much about performance as it is about
nostalgia, about owning stuff now that you couldn't afford then, and about
(now unnecessarily) large, (now unnecessarily) heavy boxes that and emit
(now unnecessary) evocative hot-tube smells while receiving the BBC about
as well as a radio that fits in your pocket.

Regards,

David Newkirk, W9VES

Hi Mark,

You've asked an interesting question. Obviously,technology hss advanced significantly in the thirty-five years since the NC-300 was built, and the payoff is generally (not always) in terms of increased performance. Here is how I'd stack up your NC-300 with newer high-performance receivers:

Sensitivity: No change. The NC-300 is just as sensitive as any modern radio. It will hear easily a 0.1 microvolt signal, which is all one needs on the HF bands.

Selectivity: Not as good: the NC-300 doesn't use mechanical or crystal filters, and while some users prefer the gradual rolloff in selectivity of a teuned IF stage, the skirt selectivity won't be comparable to that in the best modern rigs.

Stability: Not as good. Modern radios use synthesizers, whose stability is locked to a quartz crystal. The NC-300 uses a free running oscillator, and will drift several hundred Hz while the rig is warming up. In practice, the stability of the NC300 is adequate for modern SSB and CW use, but problably not adequate for H.F. packet.

Audio Quality: Many collectors believe the NC300 audio is superior to that of many solid state receivers, and thus would make the receiver superior for A.M. use. From a technical point of view, a solid state audio stage can meet or exceed the performance of vacuum tube audio, but manufacturers of modern rigs often skimp on the audio design.

Bells and Whistles: The NC-300 does't have them, modern receivers have an abundance. Frankly, I find many of the "features" of modern rigs a distraction and of no particular

benefit.

User Friendliness: The NC-300 wins hands down. The knobs are large and well spaced, the operation is intuitive. As someone who'd rather use a radio than study a hundred page manual full of initialization and keystroke entry sequences, I opt for the old boatanchors.

Serviceablility: If the NC-300 breaks, you can fix it yorself. If the modern receiver breaks, you ship it off to the factory and hope for the best.

Intangibles: The NC-300, in my opinion, is a more satisfying radio, rather like an antique car.There is a tradition and history to the radio that makes it something special. Unlike modern receivers, with their proprietary software and incomprehensible circuit diagrams, an NC-300 can, with a bit of study, be fully understand. There is a deep satisfaction that comes from really understanding what you're using. If you take the time to get to know it, the NC-300 will become an old friend. You'll never have that experience with a new kenwood or Yaesu.

So.... basically, there are pros and cons to either an old receiver or a new one. Which one you prefer depends on what you value, and how you will use it. Ultimately, nobody but you can answer that question.

73,

Jim Garland W8ZR

>Tim,KC7QOM

As I remember from my old S38EB (B was for Blonde Case), the power supply had no transformer. It was just selenium rectifiers off the line voltage to a capacitive filter. I wouldn't be surprised that your filter caps are dry and that the hum you hear is raw 60 cycle AC.

All the points made by others are well stated therefore I won't rehash it for you. However, my main reason is nostalgia. The only criteria I also look for is if it has a band spread that is set up for the SWL bands. Unfortunately not many had this feature which is why I lean towards the mil-spec spec boatanchors. When I want to dial in 5975 accurately and quickly I can with a mil-spec. Let me explain. I've owned 5 Hallicrafter SX100's in the past. All of them mint...especially the last one...it was unused in the box and now has a home in the Johnson Space Center. Yes its a gorgeous radio and very nostalgic but it just lacked something that was impotant to me...having a bandspread calibrated for frequencies other than HAM. It took 5 rigs to convince me of this!

Jim, I would like to take issue with this one point in your otherwise excellent response about boatanchor quality.

With tube audio amps, you'll notice a certain "richness" in their sound. This is due in no small part to the much more benign distortion characteristics of tubes, especially in a single ended configuration. Even tubes in a push-pull configuration (running in class A mode) have a certain quality that is unmistakeable, and superior. This is, I believe, part of the reason why so many old tube radios sound so much better than equivalently sized semiconductor counterparts.

I believe the high end audio crowd has locked onto this, as well. Just my $0.02 worth.

You'll never get the orange glow, the heat, and that wonderful
bouquet of burning dust from a Kenwood... :^)

But beyond that, it's probably a matter of personal prefernces. I
see pluses and minuses on both sides of the debate. I prefer older
rigs, as the circuitry is simpler and I can repair/maintain them
on my own a lot easier. But digital tuning has its place as well.

I guess digital tuning is OK but really, how often does it really matter
if you're at 7052.456 kHz or at about 7052? Most of the better old radios
(Drake & Collins come to mind) are accurate to +- 1kHz and that's
probably plenty good enough 99% of the time. I think people are lulled into
believing that because it's digital it's more accurate but that's
not necesarily true...more precise, yes, but not necessarily more accurate.

Spec-wise, many (most?) of the modern rigs are probably better than the
old tube rigs but I wonder if the difference is really noticible or
even usable. About the only real edge the newer rigs have IMO is DSP and
other computer-controlled gagetry, and that could be argued.

One thing that can be said about the modern stuff is that it is probably
more consistent in performance. With the older stuff there were real
performance differences between the high end (Collins, Drake), the middle
tier (Swan, high end Heathkits) and the el-cheapos (cheaper Heath, EICO,
Knight) than there are between, say the low end Icom and the high end Icom
(or Kenwood, or Yaesu). The main differences now are in the bells & whistles,
the performance is all pretty good regardless.

When it's all said & done, I'll take my KWM-2 and B-line over the newer
stuff (altho that Icom 706 sure looks nifty...:-)...

My 2 cents worth...

73.... Mark AA7TA

Each has its place. I really enjoy using my vintage equipment (mostly
Drake and Collins ham stuff, with some mil-spec stuff as well), but
I also enjoy my TS-850. It depends on what I want to do at the time.
For casual SSB and CW and SWLing, I prefer the vintage gear. It's
a real pleasure to use stuff I once could only dream of owning,
and it actually works very well. Boatanchors are also fun to work
on.

For digital modes and what little contesting (fairly low-key
contesting), the TS-850 is the clear choice. It's a fine radio,
but several of my boatanchors are a match, at least in the
real world as opposed to specs, for it performance-wise.

Enjoy whichever you prefer, or enjoy both. That's one of the nice
things about ham radio that has kept me interested all these years:
there's so many facets that it need not become boring.

73,
Jeff Kilgore, KC1MK

3692. Swap HW-16/HG-10B for ??

This is going to come off badly, I know, but I cannot for the life of
me think what is the difference between Voltage Xfmr and Current
Xfmr?

Uses, windings, and ratings kind of stuff please?

This is very like when I got stuck on a job in the middle if the
night, many years ago, and finally in despair, I called my boss at
home.

After apologizing, I asked him how to reverse a 3-PHASE motor
and he answered patiently (I was a journeyman electrician) that
I should reverse any 2 leads. Then he humg up and I went to
the job and right away called again.

I had forgotten what he said.

Then, of course, I had an excuse, and he knew it. I had been
working steadily for 3 shifts.

This time I have no excuse, except I cannot think how it goes.

Understand, there is nothing wrong
with
my
head
head
head
head
reset

but I do forget things.

Hey Boatanchor collectors/sellers!
Want to list what BAs you are bringing to Dayton, and your flea market spot number?

The DOGGYS (see below) will be in spot #1941 - the "Friendliest Spot in the Flea Market" - same as last year. Our 20th consecutive year!

So far we don't have many BAs to sell this year, but check with us anyway. We are still packing.

Rick K2XT, George KC2MF, and lots of other friendly guys

"Dayton Organizational Group Gathering Yearly.
Serious Hams In Transit To Extraordinary Radio Show !"

All good answers but they still missed the mark... Modern Rigs just don't have any soul. They all look and feel alike. Just as you would expect from some large nameless corporation. Icom, Yeau, Kenwood all look the same to me... but

Hallicrafters, Hammulund, National and the others are just plain ugly compared to the new rigs...

They embody a dream of a single or small group of men... not a corporate herd.

All these tube rigs were assembled by skilled human hands not a pick and place robot. Each hand assembled rig was just alittle bit different from each other as they went through the line.

Also there is the mastery in just using the rig. With these digital rigs, there is no thinking required. "Just point and click". With an analog dial, you have to "read" it which means some understanding of numbers (new math?). It takes some thought in how to get from one end of the band to the other...

For many, just thinking is too much trouble..

These old tube radios were built in an era in which purchased items were built to last a life time. My Chicago made Halli-S20 was built before WW2 and here it is 55 years later and it still works fine...

I respect any man made device that lasts 55 years in daily use... it will probably outlast me....

HELLO... I HAVE a Heathkit Apache .. I would like to trade
for a Johnson Valiant or other ham gear old or new.. the Apache
is about a 8 or 9 on a 10 scale and works all ok but has low
output, about 80 to 90 watts ..other than that all is ok....
have used it many times on the air with real good reports..
with manual...
thanks tim

The Greater St. Louis Antique Radio Collectors & Historians (A.R.C.H.) invite you to their annual picnic & mini-swapmeet.

When: Sunday, May 18th, 1997

Time: Swap begins around 9:00 a.m. Lunch served starting at 11:30 a.m.

Where: Tiemeyer Park in St. Ann (3311 Ashby Rd. between St. Charles Rock Road & Midland Blvd).

There is no "swaptable" fee for this event. A small donation for the picnic is requested ($3.00 per person).

This is a low-key event and family members are welcome and encouraged to attend. Visitors are welcome and encouraged to bring items to swap! We hope you can stop by and spend a few hours with us enjoying our picnic and sharing the antique radio hobby with our members.

For more information, please contact Derek Cohn (WB0TUA) at keymaster@stlnet.com

Isn't it that a HV transformer for voltage has many turns on at least one
winding but
that a HV current transformer has high voltage isolation between the
windings and
just a few turns in each and is designed to be placed in series with a HV
phase leg
in order to measure current in that leg. Something like that.

Hi, Craig:
Although Bill has already given you a completely serviceable response, I can't resist putting my offer on the table, at least partly because I'm older than the radio is.

What you have there, Craig, is not really a paper capacitor. It's really an electrolytic, and that cardboard tube hides within it an aluminum can. Marvelously, its application as a cathode bypass capacitor makes it a "who cares" component. If it opens up, the radio'll still work. Won't be quite as loud, but it might even sound a little better. And if the thing shorts across, your radio'll sound crappy (an old technical term; rough contemporary translation is "hosed"), but mothing'll be damaged. So merrily put in a tantalum electrolytic, or whatever else your heart desires, so long as it's rated at least 25 volts (just so you won't have to replace it anytime soon) and somewhere around ten microfarads. Or twenty, or whatever you happen to have. Five would do okay, too. Really. Be sure the negative side of the new capacitor goes to ground, and positive to the 6K8 cathode. Otherwise you will likely experience an extremely prompt demonstration of what a failed capacitor will do in that circuit.

I feel better now.

Hope this helps.

73,
John WA6QPL@amsat.org

3710. WTT: BC-450A for BC Band Command Rcvr

I aquired a BNIB, mint, BC-450-A control
head for command set receivers.
The box is old and dusty, but sound.
It was made by Western Electric and is seral # 8479.

The control head itself is absolutely new and has
dials for 3-6 Mc, 190-550 kc, and 6-9 Mc, spinner knobs,
output controls, cw/off/mcw switches, and A-phone/B-phone
switches and jacks.

What I would like is not to sell it but to trade if for one of
the broadcast band command receivers that pop up
occasionally (when I am not looking :-)

3713. $$ BECOME RICH SOON $$ PLEASE READ THIS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-03 00:00:00 UTC
From: "Walter J. Thomas" <aag01@hotmail.com>
Message-ID: <5ke11l$gi0@news.skyweb.net>
Source record: 120409

Subject: $$$$: BECOME RICH SOON !!

Dear reader,

PLEASE TAKE A MINUTE TO READ THIS, I'M RICH NOW AND YOU CAN BECOME TOO!

YOU CAN START YOUR OWN INTERNET BUSINESS IN YOUR SPARE TIME!!!

As you know the internet is growing at a tremendous rate. And
I'm sure you realize that millions of dollars are exchanged
for goods and services on the internet each day. Have you ever
said to yourself "I would like to use my computer too make
money" (or to make more money)??
WELL YOU CAN AND WILL MAKE THOUSANDS OF DOLLARS QUICKLY AND
EASILY IF YOU FOLLOW THESE SIMPLE INSTRUCTIONS!!!
The Business program outlined below is a simplified form of
E-mail marketing. Do not take this opportunity lightly, it is a
powerful tool that will allow you to have your own business
and start you on the path to financial freedom.

I KNOW THIS BUSINESS WORKS!! IT HAS WORKED FOR ME AND IT WILL
WORK FOR YOU. By the time you receive this business plan there
is a good chance that I will have been removed from the system.
But thats ok because I have already made a tremendous amount of
money using this system, and I would like to see your life change
as much as mine has. There is nothing more rewarding than
knowing that I have helped many good and honest people enrich
their lives. Follow the instructions listed below EXACTLY and
you will be on your way. Good Luck, and share the wealth.

Sincerely,
Walter J. Thomas

STEP1).
Get 5 pieces of 8.5"x11" paper and write:
"Please add me to your information mailing list"
Now take 5 $1 bills and fold $1 inside each piece of paper.
Place the request and money in 5 seperate envelopes and seal.
Carefully address the envelopes with the 5 addresses provided
below.(Be sure to include a return address and a stamp!)
Now mail the requests In a timely manner.

#1) Shari Davis; 1635 Manning Way; Colorado Springs, CO. 80919

#2) Gene Propp; 5121 W. 72nd Street; Praire village, KS. 66208

#3) Steve Wrubel; 3234 Nebraska Place; Costa Mesa, CA. 92626

#4) Rene van Ratingen; Akker 2 ; 6093 EJ ; Heythuysen ; Netherlands

#5) Walter J. Thomas; 244 5th Ave, 2nd Floor, New York NY, 10001

STEP2).
Copy this entire business plan and make the following changes:
Remove the #1 name off the list.
Place your name in the #5 position and move the other 4 names up. (#5moves to#4, #4moves to#3, #3moves to#2, #2moves to#1)
Your name is now the bottom of the list.

STEP3).
POST THIS ARTICLE ON AT LEAST 200 NEWSGROUPS!!!!!!!
E-MAIL THIS ARTICLE TO EVERYONE YOU CAN!!!!!!!
IMPORTANT NOTE: You MUST post this article to AT LEAST 200 newsgroups. There are about 45,000 newsgroups, with more being added every day. Each time you post on a newsgroup your message will be seen by many different people.
You should send this article via E-mail to as many people as possible. E-mail addresses are available for free through many sources on the internet. You can also purchase E-mail lists from several companies for a very small fee.
Remember it's your business and the more places you send it to, the better your chances of success! (I highly recommend that you send it out to more than 200 places).
REMEMBER TO PUT A CATCHY PHRASE IN THE SUBJECT BOX.

CONGRATULATIONS YOU HAVE JUST JOINED A GROUP OF ENTREPRENEURS!

Let me review why this works.....
Send out 200 articles and with a 5% response you get $10.
Those 10 people send out 200 and at 5% you get $100.
Those 100 people send out 200 and at 5% you get $1000.
Those 1000 people send out 200 and at 5% you get $10,000.
Those 10,000 people send out 200 and at 5% you get $100,000.
EVERYDAY THOUSANDS OF PEOPLE JOIN THE INTERNET!!!!!!!!!!

The above example is a perfect case scenerio. The response rate varies typically from 2% to 10%. To increase your success rate I suggest that you post this article to AT LEAST 200 newsgroups and send it to as many individuals as possible. Remember many people will see this article when it is posted on a newsgroup!! Also note that many of the people you send it to are likely to send it out to more than 200 newsgroups and people.

You don't have to retype this article every time you send it, just follow the instructions below and you will see just how easy this business is. If you follow these simple instructions there is no way you can lose. Every day several thousands of people get on the internet. Don't delay start today, you'll be glad you did!!!!!!!!!!!!!!!!!

POSTING TO NEWSGROUPS USING NETSCAPE:
1) Click on any newsgroup, like normal.

Then click on to " To News" in the top left corner of the
Newsgroups page. This will bring up a message box.
2) Fill in the subject box with a catchy phrase such as:
$$$FAST CASH$$$, ARE YOU THE PERSON WHO..., or the like.
3) Now go to the message part of the box and retype this letter
exactly as it is here. (The only thing you change is adding
your name in the #5 position and moving the other addresses
up 1 position each, thus removing the #1 name).
4) When you are done typing in the WHOLE letter, click on "File"
above the send button, then "Save as..." DO NOT SEND YOUR
LETTER UNTIL YOU SAVE IT!!(this is so you only have to type
this once).
5) Now that you have saved the letter, go ahead and send your
First copy!(click the send button in the top left corner).
6) THIS IS WHERE YOU POST AT LEAST 200 TIMES!!! OK, go to any
newsgroup article and click the "To News" button. Type in
Your catchy phrase in the SUBJECT BOX, then go to the body
part of the message box and place your cursor there.
NOW click on "Attachment" which is right below the SUBJECT BOX.
Click on "attach file", then find the letter you saved, click
once on your saved file, then click "Open", Then click "OK".
If you did this right, you should see your filename in the
attachment box and it will be shaded.
NOW POST AWAY!!!!!!!!!!!!!!!!!!!!!!!!!!!!

IF YOU ARE USING INTERNET EXPLORER:
1) Its just as easy, Holding down the left mouse button,
highlight this entire article, then press the the "CTRL" key
and the "C" key at the same time to copy this letter.
2) Now go to the newsgroups and press "POST AN ARTICLE", Type in
your catchy phrase in the subject box, and click the large
window below. Press "CTRL" and "V" and the article will
appear in the message window. **BE SURE TO MAKE YOUR ADDRESS
CHANGES TO THE 5 NAMES**
3) Now re-highlight the letter and RE-COPY it so you have the
changes...Then all you have to do for each newsgroup is
press "CTRL" and "V" and press "POST" it's that easy!!!!!

Thats it ! All you have to do is jump to different newsgroups
and post away. For both methods it only takes about 30 seconds
to post to each newsgroup. Once you get the hang of it.

REMEMBER THE MORE NEWSGROUPS YOU POST TO THE MORE MONEY YOU MAKE!!
YOU MUST POST TO A MINIMUM OF 200 NEWSGROUPS!!!!!!!!!!!!!!

You should start receiving replies within a week or so (sometimes
they come within days)

BE SURE TO SEND OUT $1 TO THE PEOPLE ON THE LIST PROMPTLY!!!!!!!!!

PERSISTENCE AND HONESTY WILL REAP YOU HUGE REWARDS!!!!!!!!!!!!!

DO NOT TO LET THIS OPPORTUNITY PASS YOU BY!!!!!!!!!!!!!!!!

FOR JUST $5 YOU CAN CHANGE YOUR LIFE!!!!!!!!!!!!!!!

REMEMBER: THE PERSON WHO DARES NOTHING, NEED NOT HOPE FOR ANYTHING.

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection.

Especially interested in anything by Langevin.

The older the better, and basket cases are always welcome.

Thanks in advance.

OK according to "McElroy - worlds champion radio telegrapher" by Tom French - it appears to be a 1936 model. 1936A had an aluminum plate and 1936B had a brass plate.

This is the most common Ted bug found. 1936 was the last year he made them in his home in Boston.

It's worth $7.95 ..... back in 1936 ...

3742. BOATANCHOR on KonTiki raft?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-04 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19970504121401.IAA28384@ladder01.news.aol.com>
Source record: 120348

The local PBS (Petroleum Broadcasting System) station several nights ago had a black&white show of films made on the KonTiki raft expedition (south America to Polynesia) narrated by Thor Heyerdahl.
The raft was made of balsawood logs roped together, much as prehistoric peoples might have done thousands of years ago.
They used a 7 watt HF transmitter on the hambands to communicate, with a National receiver. It looked like a NC-173 or 183.
At the end, they beached the raft on a reef. Don't know if the radio was saved. Could it have become a BOATANCHOR???
:-)

Have confirmed that they used NC-173 together with British B2 developed
by G3EUR John Brown during the world war II, I could send the other info
as email, but the lousy server rejects it at the moment!

>

Be VERY careful with these. I worked with these (and did qualification
testing) while
at Mallory. During high discharge, cells can become reverse biased and
vent or
explode. One D side internal cell went through TWO sheets of 1" transite
and lodged
itself in a cinderblock wall. NEVER, NEVER, NEVER attempt to recharge
these batteries!

Also, short circuit current is in the range of 150 Amps, so make sure to
fuse your
setup... (ie, don't bypass the pack fuse).

And NEVER open up the cells. SO2 turns into (eventually) sulphuric acid on
contact
with the moisture in your lungs, plus the electrolyte salt is cyanide
based.

That all said, these are incredible batteries.

> NMT:944-26396

(Apologies for the full quote, but my newsfeed seems to be incomplete in
that I did not see the response from Mr Casey firsthand.)

--the highest dynamic range mixers ever included in shortwave
radios--mixers based on RF MOSFETs used solely as switches, with no element
voltages other than local oscillator signal applied--draw no anode current
at all. Their performance cannot be approached with vacuum tubes. If you
factor in the need for performance at frequencies at which vacuum tubes
can't usefully function in the vast majority of modern applications--UHF
and up, which frequencies are of considerably higher economic interest tha
MF/HF--there can be little positive comparison between thermonic and
solid-state technology at all. Further, considering the widely different
circuit topologies possible, simply equating, out of that context, the
performance of analogous devices with the current in their analogous
electrode(s) returns very little useful insight.

The tube-versus-solid-state issue is an issue only for radio technology
users for whom belief about performance substitutes for facts about
performance. Wherever thermionic technlogy provides the best solution to a
problem, it's still used by military and commercial communicators. Only
for very narrowly defined applications (and mainly for transmitting, where
tubes' brute power handling capability still can't be equalled by solid
state, and data display) are vacuum tubes appropriate technology for new

designs--or for getting the best radio performance possible--at *any*
frequency in the 1990s.

David Newkirk, W9VES

3750. Galena crystal??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-04 00:00:00 UTC
From: Ray LaRue <raylarue@gte.net>
Message-ID: <5kigub$66e$1@news7.gte.net>
Source record: 120356

Recently found my original Cat's whisker crystal holder, less the crystal. This was my part of my first "radio" many years ago. Would love to find another crystal and build a set, to show my kids and grandchildren. Anyone able to suggest where I might get a piece of Galena? The holder looks like it takes a piece about 7/16" in diameter. Thanks for any help you can offer.
73,
Ray, W4BYG

As some of you may be aware, I have up and maintain a
WWW page with information on various military radio
gear. This is a non-commercial endeavor, and is free to
all -- and shall remain so.

What I am asking is for those who visit the page to take a look
around and help fill in the blanks. There are many pieces of
equipment I have been unable to find information on. If anyone
finds something NOT there that should be, please drop me a mail
at any time via the mail links on the page.

Scanned photos are always appreciated as are scanned schematics.

Your radio links are welcome as well.

I would also like the thank all of you who have used the list and find
it be of value. Much of the original list was handed down from various
folks over the years, notably Bill Beech and Terry O. I have expanded
quite a bit from those original lists, and find the research very enjoyable.

The list so far has close to 11,000 hits since October of 96, and email
keeps pouring in to enflate my ego on the good job done> :-)

Drop by and visit some time if you havent already done so. The URL is

http://telalink.net/~badger/millist/mi.html

Flames and comments always welcome.

I believe I can help... Contact Antique Radio Supply (602)-820-5411 and ask about part # PQ-111 at $2.10 It has a Galena chip mounted in a lead button, just like the "old" days...

Till it comes in, you can cheat by using a 1N34A to get your set up and running.

When you get your set working again, you might want to experiment, many other minerals can act as diodes.

What I do is go into the field and collect some mineral samples. Take a standard VOM in ohms scale and put the probes about 1/2" apart. If it's less than 20 ohms, then the sample is too metallic. More than 100 ohms, too "muddy". But sample readings of 50-100 ohms seem to work fine.

Wash the sample well and then crack it with a hammer. Take a gas tourch and melt some ACID core solder into a metal bottle cap. Wait till the solder is almost congealed and stick a 1/8" rock sliver in so that part of it sticks out. Now you can place it in your detector stand and start probing for that RF hot spot.

I have used Iron Pyrite, Carbonium, Stibinite, and I have been told that Borite works but I have never tried it.

FYI - If you go to a mineral store looking for Galena, there are two types you can get. They come from Missouri and the Kansas ore fields. Old timers say the Kansas is far better, as good as or better than a 1N34A.

Take a VOM with you and make sure you find a piece that is between 70-100 ohms. Most store samples are too metallic to be of much use.

Good luck!

You might also surf over to the XTAL Set Society Web Site.
They sometimes have the mailing address for Modern Radio (?)
in Minneapolis. They usually have Galena and all the rest,
plus a lot of other supplies. If it isn't listed, they have
an E-Mail capability, shoot them a note and ask. I can't
recall if the company is Modern Radio Labs (MRL), I think?

John,

If you are interested in chasing it down a bit, there are several WEB sites which deal in telegraph keys and McElroy. I am not an expert by any means. There is an excellent book on the subject written by Tom French, W1IMQ, called "McElroy - World's Champion Radio Telegrapher", goes for $19.95 from Tom or Artifax Books.

Mac S/Ns can be a challenge at times. There was some sequence and consistency, but some gaps exist. The #66nn is one of the areas in question, as the series appears on different types, but it is probably about 1936 in vintage.

Depending on condition, completeness, actual type, and most important the adage that "One Person's Trash, is Another Person's Treasure" the price will vary. I got a really beat up one for $20.00 and got a really nice one by trading two very large unique British RR Keys.

I'll defer to someone else to narrow down the $$$$ more than that.

>p.s. I think he is asking about $600 or so.

I talked with Art on the telephone this morning. The correct model number for the transmitter is T-368C/URT and his asking price is $650. He rated the condition at fair to good cosmetically and it "could use a paint job" although there is no rust on it. It has two broken 4-125 modulator tubes and is not currently operational. He inherited it from another amateur and has not had it on the air. The transmitter is wired for 110 volt operation. There is no manual.

Not quite what I was looking for but now with the correct model number someone else here might be interested.

Content-Disposition: inline; filename="FMT.TXT"

The first BA FMT (Frequency Measuring Test) will take place the evening
of May 21, 1997 at 1900 CST. That's May 22 at 0000Z. Transmissions will
take place on the 80, 40, and 20 meter bands with the following schedule:

1st RUN will start at 0000Z:

80 meters: Transmitter tuneup (period 1) 0000-0005Z
Equipment checkout (period 2) 0005-0010Z
ACTUAL TEST PERIOD (period 3) 0010-0015Z

40 meters: Transmitter tuneup (period 1) 0015-0020Z
Equipment checkout (period 2) 0020-0025Z
ACTUAL TEST PERIOD (period 3) 0025-0030Z

20 meters: Transmitter tuneup (period 1) 0030-0035Z
Equipment checkout (period 2) 0035-0040Z
ACTUAL TEST PERIOD (period 3) 0040-0045Z

2nd RUN will start at 0200Z and will follow the same schedule as above.

TRANSMISSION FORMAT (Similar to shown below):

During period 2, transmission will be 13WPM CW:
VVV DE K9EUI FMT TO FOLLOW
5 seconds of steady carrier
repeat for 5 minutes

During period 3, transmission will be 13WPM CW:
QST QST QST DE K9EUI WITH FMT TO FOLLOW NOW

20 seconds steady carrier
VVV DE K9EUI FMT
repeat for 5 minutes

VVV DE K9EUI END OF FMT 73 SK

////////////////////////// RULES //////////////////////////

Transmissions will be near 3600, 7175, and 14060 kHz plus or minus
5 kHz. Transmissions in periods 1 and 2 not guarenteed to be on
final frequency (but close). Only the period 3 frequency counts
(see #4 below).

1. All equipment used in the reception, calibration, and measurement
of the FMT must be tube type equipment. No solid state gear can
be used.

2. Logs must be submitted to K9EUI via E-mail to: broehrig@admin.aurora.edu
and received by me no later than 0000Z Thurs May 29, 1997.

3. Logs must include your name, callsign (if any) and E-mail address,
a list of all equipment used for the test, the measured frequencies,
and time of each measurement.

4. You may take as many measurements as you like but only those taken
during period 3 will be allowed. Only one measurement per band per
run is allowed on your submitted log. If you take more than one
measurement, total them up and average them out. In other words,
your log may contain a maximum of 6 readings.

Results will be posted to BA and GB reflectors as soon as I can after
the deadline.

With regard to the NC 173 aboard the Kon Tiki, check out the October, 1995 edition of Electric Radio for an article written by W8KGI. Jim Hanlon describes how two crewman on the Kon Tiki, Torstein and Knut, took that NC 183 apart on Rarotonga Island. They dried out the radio and then had it back on the air within a day and then established a QSO on August 9, 1947 on 13990 Khz with a ham in Colorado.They had sought to forstall rescue efforts that would have been undertaken had they not established communications on schedule. It is a a worthwhile article to read. A true boatanchor indeed, try that with state of the art technology.

3775. HERRESHOFF'S SCHOONER

I'm looking for information about a schooner, now called PRESQUE ISLE.
The precedent registred name was probably TIAB.
It is a replica of Francis Herreshoff's design n. 257, bilt as JOANN and
now
sailing as BRIGADOON.

Thanks in advance, Michele Bojola

3777. fs or trade Heathkit and Yeasu

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-04 00:00:00 UTC
From: kk5hy@accesscom.net
Message-ID: <336c9724.2813592@news.accesscom.net>
Source record: 120383

Hello to all,
I have the following for sale or trade.

Heathkit SB-400 $80.00 plus shipping
Cover repainted, panel lettering worn but very readable. No dings or dents.
Has full output on CW, I don't have a mike with the Heathkit connector to test sideband. Missing one crystal (36.895) in the crystal pack.

Yeasu FT-101EE with remote VFO $300.00 plus shipping
works great, clean.
lettering on the on and heater worn but all others perfect.

Thanks, Jake KK5HY

Can anyone please help with info (schematic or directions for sources)
for a AN/FRT-83V (or -84V) Navy Transmitter. Made by RF COMMUNICATIONS
INC (now diffunct) out of Rochester, N.Y..

I have checked with the NAVY DEPT. LIBRARY (202)433-4132, with the
NATIONAL ARCHIVES in Washington, D.C. (202)501-5350, and with
HOWARD-SAMS (800) 428-7267, without any luck.

I'd appreciate any help or tips

Tnx,
Best 73's

Jess KB6MWU

3780. Needed QST's and Handbooks

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-04 00:00:00 UTC
From: ekugrad@mindspring.com
Message-ID: <5kgb02$sfj@camel3.mindspring.com>

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I am in need of the following QST's and ARRL Handbooks.

QST's NEEDED

1933 JAN
1934 SEP
1935 AUG
1936 JUL, SEP, OCT
1937 JAN, APR
1938 JAN, FEB, JUN
1939 JUL
1948 FEB
1960 NOV
1980 JAN
1981 FEB, SEP,
1982 MAY, SEP, NOV
1986 SEP

I am looking for good condition magazines. I already have most of these, but they are in poor condition (torn or missing covers etc.), so only interested in good condition copies.

I have quite a few dupes to trade if you want, or will purchase outright.

ARRL HANDBOOKS: 40, 41, 42, 44, 50, 57, 62,
Only interested in paying between $10 and $20 for these. Don't realy "need" them, just would like to have them hi hi.. Also have some dupes here that I can trade.

I Also collect other Pre-1960 ARRL Publications (Antenna Handbooks, Understanding Amateur Radio, Operating Manual, Course in Fundamentals, 200 meters and down).

Interested in old Logbooks, QSL cards, Catalogs. Anything of historical interest to Amateur Radio.

Thanks for reading this post

3781. Drake R-4C.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-04 00:00:00 UTC
From: J M Noeding <la8ak@online.no>
Message-ID: <336BBADC.5A96@online.no>
Source record: 120438

A very good technical note on R-4C is written by W5DA (73 magazine june 79 - particularly efficient modification for third mixer). Not so efficient is the modification for product detector in Ham radio nr 12/77 - still without connection between BFO and product detector, there are lot of interference with the 50kHz IF signal. This seems not to come from the product detector ....but seems to be some process happening earlier on in the receiver, possibly it is some unwanted mixer process at second mixer. To avoid this is important for me, because I use this receiver for cw meteorscatter, with extra product detector (BFO: 55kHz) for at least 5kHz higher audio frequency pitch. The level of unwanted signal is variable, but I never succeeded to trace where the unwanted signal came from, possibly it stems from the xtal oscillator driving second mixer.

my R-4C is s/n 22077, has 3x EF184/6EJ7. The original valve for 3rd mixer was rather noisy, but the Philips replacement valve was not. I have 2x Drake 2-B, and in many respects I like them better, I use R-4B type AGC circuits for the 2-B. I also had a 2-C 30 years ago, but sold it very soon because it was not a '2-B'

Hallifcrafters HT-40 transmitter, good cosmetics and tubes. Cabinet has a few scratches. National NC-33, fair cosmetics and there is a couple tubes missing. I don't know anything about these radios. The Hallicrafters powers up fine and seems to be OK, the National might be a parts unit. Best offers on one or both.
E-mail or call 216-352-1247

3785. FS T-386C H.F. AM Transmitter

This listing is from Art who is w/o e-mail capability:
T-386C/URT manufactured by Barker and Williamson. Modulator MD239/GR,
Antenna Tuning Unit BG-939-B. Rig uses 4-400A in PA. I'm not an expert
on these but I believe that this was the replacement for the BC610.
This is a HEAVY rig so pick up only in San Bernardino (Southern Calif).
Please call Art at: (909) 381-8147
p.s. I think he is asking about $600 or so.

Have heard it said that tube front ends tend to have better overload characteristics than solid state. More dynamic range, though a carefully designed modern rig should be fine here.

Something else, tube front ends don't mind nearby lightning and nuclear bombs quite as much as solid state.....

I believe that a tube drawing 1mA anode current will have almost same intermodulation charachteristiques as a transistor drawing 10mA.....Of course - with some minor variations between the different items. Or is it another view? This was mentioned by DF7JE Theodor.

E-Mail Your Way To Riches!

Dear Friend,

We all know E-mail is here to stay. It's fun, easy and exciting! Would you be interested if we could show you a way to make well over $1,000 per week doing it?

This is not a joke. You may have seen many people trying to tell you that you can make money by joining this or that scheme! Guess what, you decide to go for it and then you get nothing but frustration and disappointment! We are here to take your frustration and disappointment into an Electrifying Adventure!

We have been marketing on-line for almost 2 years now! We have never spent one red penny on advertising and made nothing but profits. We can show you how to make money every day of the year. Many people may think this is untrue or it just can't be done. We are here to tell you that it is absolutely not true. The biggest mistake people make about marketing on-line is that they sit and wait for people to contact them. You will never make it if this is your approach and we'll tell you why. There are over 60 MILLION people on-line right now, and seven new people logging on every minute of the day world-wide and everyone is offering something. So how do you get a potential client or a new customer before your competition does? The answer is simply " Creative E-mailing" and it WORKS! I'll tell you why. You're taking your product, service or idea directly to the market instead of waiting for the market to come to you!

Here are a few testimonials we'd like to share with you (They're all 100% TRUE!):

Internet Communications, my wife and I owe you so much. We ordered your Creative E-mail System and within the first week we received over $1,150 in orders for my Internet Consulting business!
--Charles -- California

I have bought two so-called E-mail programs that cost me over $600.00 when I received them. They were extremely difficult to operate and it took me about two weeks to figure them out. Once I did, they were so time consuming it just wasn't worth my time. When I received your course it took me about four minutes to install and I was in business! Within the first 24 hours of my first E-mailing I received over $580.00 in sales over the phone. That first week I grossed over $2,000.00! I really can't believe how easy you made this, anyone can do it! Thanks!
--Dennis -- Illinios

Hello, I'm a divorced mother of two children. I wanted to thank you for helping me out. This was my first time buying anything on the Internet. I was skeptical at first but I figured I'd take a chance. This was the best chance I've ever took! My part-time business is now a full-time home-business, thanks to your

Creative E-mail System. I had to hire my two family members to help me out!
This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

==========> E-Mail Databases <==========

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your

advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

> Thanks for any help you can offer.

When I was a boy and made a Xtal set from a coil wound on a Toilet Paper
sleeve, an old (then) variable and some old phones, I used a piece of
coal as the Xtal!

It worked well and I got the local BBC transmitter OK...using it in bed
to listen to the progress of WW2...my parents forbid me to listen to the
War on our big Kolster Brandes radio on the grounds that it might upset
me!

Antenna was about 200 feet of wire tacked around the inside of the Roof
and a tiny hole over my bedroom as a feed thru...

Now living in the same house...its mine now...using the same little
bedroom...and the wire and hole is still there....but no Xtal set!!

3806. Looking for Navy and Army archive sites or contact persons

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-05 00:00:00 UTC
From: rdkeys@unity.ncsu.edu
Message-ID: <5kl1u0$fuo@uni00nw.unity.ncsu.edu>
Source record: 120312

I am looking for Army or Navy historical archive sites, on-line or paper types, or contact persons that might be in charge or work around such archive sites. What I am trying to do is find certain early radio related archive information, particularly early manuals and documents from the WWI through mid 30's era. Surely there should be some pointers thereto somewhere, as to whom I might contact, etc. Email addresses would be the first place to start, since some of it is supposed to be on-line from what little I have been able to find out --- but where, I dunno.

Thanks

But it can be somewhat intimidating, initially, when you see
that relatively _huge_ 10uF@50V cardboard-covered electrolytic
and note that the modern axial-lead replacement with equivalent
specs is something like 1/20 of its size... :^)

Was being careful here to compare apples to apples... yes, an R390A
will resolve to +/- 1KHz, and that is close enough for a lot of
applications (I'm strictly an SWL). But there are quite a few modern
digitally tuned receivers that are priced substantially less that what
Collins gear is selling for today. I was thinking at the lower-price
end of the spectrum here (i.e. a better "slide-rule" analog versus,
say, an ICF-2010, where it's the difference between knowing what you
are tuned to versus a lot of initial guesswork). If you were comparing
a more elaborate desktop unit, like a Drake R-8 or an NRD-535, to an
HRO-500, the advantage to the digital front end there would be much
less significant, to be sure.

Source record: 120316
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

For Sale:

Heathkit HW-32 20m SSB monoband transceiver, 14.200 - 14.350 MHz USB.
Physically in good shape, very little wear on the front panel.
Electrically, it's basically functional (I made a contact on it).
Needs three tubes I donn't have on hand (one each 6BE6, 6EB8, 12AT7).
All other tubes have been tested and are good (including driver and PAs).
No modifications that I can spot (had a BNC installed on rear panel,
which I removed, leaving an empty hole, but that was all I found).

Original manual, power supply cable, and a non-matching mic included.

This rig WILL require some work, but it is basically functional.
Consider it to be a "project radio". It is NOT for the beginner!

Requires one of these Heathkit power supplies (NOT included!):
PS-10, PS-20, HP-13, HP-23, HP-23A, HP-23B

Or build your own, with these requirements:
+800 vdc @ 250 mA
+250 vdc @ 100 mA
-135 vdc @ a few mA
12.6 vac @ 3.75 A

Price is $50. Buyer pays shipping (15 lbs from 75065).

73,
Dean K5DH

Source record: 120318

Might a BA be better in some respects than a more modern
phase lock-loop rig?

I'm thinking of the discussion of phase noise in the recent ARRL
handbooks. PLL local oscillators jitter so that the passband
has tails due to the phase noise. If there is a strong signal in those
tail regions then it wil cause interference to a weak signal.

A boat anchor with an analog oscillator would not have this problem.

I think mathematically the PLL and the analog oscillator may have
similar spectra, but the PLL oscillator picks up a trace of the strong
signal continuously and doesn't drift. The analog oscillator misses the
strong signal until it drifts over and picks it up directly. Same
spectrum,
but different reception results.

It was an NC-173. But, National used the whole thing in ads for the
NC-183.

From QST October, 1951:

"Millions have read the best-seller and seen the movie!.....
totally submerged*.....
yet kept on working!
In landing, an NC-173*,
smaller brother of the NC-183,
was totally submerged. Yet
after it was dried in the sun,
one DX contact after another
was established.

*No longer available, but see the evn better
HRO-50T1 and the NC-183."

The ad goes on to call it the "ears" of the Kon-yiki.

Man, these old magazines are great!

For Sale - Eddystone 940

1960's general coverage receiver in the typical grey Eddystone Style.
One of the most popular sets used by amateurs.

Complete and in excellent condition and working order. The only mods
are a different mains connection and aerial socket.

For Sale - Eddystone 730/4

1950's general coverage receiver in grey case with flip up lid. This is
another popular model and is in excellent working order and good
condition. Has similar mods to 940 above.

I will take offers on these two radios until Wednesday 7th May in
POOUNDS STERLING ONLY. Please DO NOT INCLUDE CARRIAGE in your offer as
this will be at your discretion; i.e. you can arrange collection or I
can tell you the cost price to me to add on.

3817. Unbuilt Kits (???)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-05 00:00:00 UTC
From: "Christopher A. King" <cking4@ford.com>
Message-ID: <336E4EFA.2647@ford.com>
Source record: 120323

I really hate to be such a grouch all of the time -- but could someone explain to me the allure of dealing in unbuilt electronic kits?

Let's see; you find an unbuilt kit for sale. You pay a premium price for it, send the money away or whatever, then you get this box that has all of the parts in it, just like the day it was made. So you sit there and look at it. It can't do anything useful, because it's not built yet. If you build it, it will do something useful (provided you assembled it properly), but now it's no longer an "unbuilt kit" and it has lost all of the value that you invested in it. So you keep looking at it, all of those nice unused parts... and you keep looking at it... for years and years... then, either you die and it gets sold in an estate sale, or passed down to one of your young nephews, who promptly builds it (and probably does not get it working), because he sees a fun project and does not know any better. Or mabye you decide to resell it, and end up making a profit since it went up in value a bit, about as much money as if you had just left the money in the savings account or invested in bonds or a mutual fund or two, and not bought the unbuilt kit in the first place.

Am I missing something here...? What's the point? No, really, this is _not_ a "Burt Fisher" troll -- I'd really like to know. Thanks in advance to anyone who can set my clueless soul in the right direction...

Hi, My dad is looking for a replacment rotary switch
wafer for the bandswitch on his hallicrafters ht-37. Or some reasonable
means of reproducing it. Can you help? If you can, please email
him at dearl@juno.com. Thank you.

3825. Antique Radio Meet in Minnesota

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-05 00:00:00 UTC
From: The Farmers <farme007@tc.umn.edu>
Message-ID: <336E9E2A.3197@tc.umn.edu>
Source record: 120331

The Northland Antique Radio Club is hosting Radio Daze '97 on May 16 and 17, 1997 in Golden Valley, Minnesota. This event is co-sponsored by the Antique Wireless Association (AWA) and the Pavek Museum of Broadcasting.

It offers a two day swap meet, auction, radio contest, luncheon, speakers, and an awards presentation. It is an event which is well attended by prominent radio collectors from across the country.

For details, check our Radio Daze website!
http://www.geocities.com/TelevisionCity/4544/daze97.html

From: Bob Miller <bmiller@calweb.com>
Message-ID: <336EA3E5.5508@calweb.com>
Source record: 120333

I have been doing lot of cleaning and thinning of my junk the last couple years and in the process sold a few of my excess Command Sets (ARC-5s etc.). And during this period I noticed what I would call an almost rabid reaction from some of the collectors regarding modified command sets and surplus radio junk in general. My question is simply this: Historically, and from an Amateur Radio perspective, how do command sets and other W.W.II surplus items fit? It seems that current collectors eschew any amateur radio evolvement with these items, yet if not for the radio amateur's collecting and using these rascals there would probably be none around today at all. Are the collectors of today merely trying to recreate the radio systems of WWII's War Birds? Is their missionary zeal to find untouched command sets ahistorical? Or is the applications that made used of these war materials more in keeping with Amateur Radio history? Should not a nicely converted ARC-5 receiver and transmitter pair ala the CQ Command Sets book receive a degree of respect among the amateurs who used them as their entry level radio set? How many of the current breed of radio collectors actually converted and used command sets as stations or mobile rigs or as component parts of a home brew SSB exciter?
I would be interested in how my fellow hams interpret these questions and likewise how non ham radio collectors see these sets as well.

Tnx es 73

You might try looking at any repository library for the documents. As an example, the University of Kentucky has over 750 shelf feet of mil manuals and training books, I have so far found everything that I have looked for. Call NC State or UNC main libraries.

You might also check with the Army Signal Corp Museum. It is located in Georgia and has a web site.

Hope these pointers help.

3830. Heathkit Advice Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-05 00:00:00 UTC
From: cdorn@gpu.srv.ualberta.ca
Message-ID: <5kldt5$j58$1@pulp.ucs.ualberta.ca>
Source record: 120336

Hello,

I could use some advice regarding a Heathkit that I picked up over the winter. I finally have a little time to look at it and decide what to do. It's an HX20 SSB/CW transmitter, and seems to be in good shape. I don't have the manual, and therefore have not tested it. I did power it up, and all the tubes lit up fine. The Ham that sold it said that it was operational. I understand that there is a matching HR20 receiver that transcieves with this. Are these hard to find? I don't currently have a rig on the air, and am looking to do some local 80m stuff with little cost. Is it worth it to pursue these "twins", or should I look at something else?

Thanks to all,
Chris VE6RDC

Well it's time to get the AM gear warmed up.

Starting today I'll be out on 50.400 AM

I'll be on at 19:00-19:30 PDT Monday and Thurs.

If there is a opening around 16:00 PDT then I'll be
on as soon as I get home from work Mon - Fri!

Hope to hear from a lot of you.

I have received a lot of e-mail from all over the country
and Canada in full support of this test.

Be sure to check out my web page for current info.

http://www.geocities.com/Hollywood/5860/50am.html

Also send me e-mail of your QSO's and I'll post them on my page!

Chris-

It is all in the eyes of the beholder. The Love and the nostalgia of the past. No, I don't build unbuilt kits but can very much appreciate those that do. My penchant is in restoring older equipment from my teens and 20's.

It's kinda like (though Ford did not build kits) restoring a 1956 Thunderbird. Now, this is a lotta bucks! Not one I can afford, certainly.

Mac

3834. Needed: 30's vintage AM/CW transmitter

Newsgroup: rec.radio.amateur.boatanchors

I am attempting to put together a 1930's vintage amateur station. The receive portion is now complete (a 1935 HRO). I'm now trying to find a transmitter to compliment it. Maybe a National NTE30 or NTX30? A homebrew period peice might also work.

If you know where I could acquire such an animal, please email.

Thanks... ron

> Thanks for any and all help.

Hi John -- My 1958 Allied Radio Catalog matches your description if the 10th tube is the xtal calibrator. Sold for $104.50 + $10.50 for the xtal calibrator. No model number is given Just "New Knight Kit Deluxe All Band Amateur Receiver". Main dial from 540kHz to 31 Mhz in 4 ranges. Band spread for the Ham Bands. Later catalogs show the R-100 which had 10 controls along the bottom and no antenna trimmer at the top of the panel.

Allied order number was 83 YZ 726.

An SASE will get you a xerox copy if you wish.

P.s. It shows the bandswitch as a PC board assy.

I built an R-100 -- was fun as well.

E-Mail Your Way To Riches!

Dear Friend,

We all know E-mail is here to stay. It's fun, easy and exciting! Would you be interested if we could show you a way to make well over $1,000 per week doing it?

This is not a joke. You may have seen many people trying to tell you that you can make money by joining this or that scheme! Guess what, you decide to go for it and then you get nothing but frustration and disappointment! We are here to take your frustration and disappointment into an Electrifying Adventure!

We have been marketing on-line for almost 2 years now! We have never spent one red penny on advertising and made nothing but profits. We can show you how to make money every day of the year. Many people may think this is untrue or it just can't be done. We are here to tell you that it is absolutely not true. The biggest mistake people make about marketing on-line is that they sit and wait for people to contact them. You will never make it if this is your approach and we'll tell you why. There are over 60 MILLION people on-line right now, and seven new people logging on every minute of the day world-wide and everyone is offering something. So how do you get a potential client or a new customer before your competition does? The answer is simply " Creative E-mailing" and it WORKS! I'll tell you why. You're taking your product, service or idea directly to the market instead of waiting for the market to come to you!

Here are a few testimonials we'd like to share with you (They're all 100% TRUE!):

Internet Communications, my wife and I owe you so much. We ordered your Creative E-mail System and within the first week we received over $1,150 in orders for my Internet Consulting business!
--Charles -- California

I have bought two so-called E-mail programs that cost me over $600.00 when I received them. They were extremely difficult to operate and it took me about two weeks to figure them out. Once I did, they were so time consuming it just wasn't worth my time. When I received your course it took me about four minutes to install and I was in business! Within the first 24 hours of my first E-mailing I received over $580.00 in sales over the phone. That first week I grossed over $2,000.00! I really can't believe how easy you made this, anyone can do it! Thanks!
--Dennis -- Illinios

Hello, I'm a divorced mother of two children. I wanted to thank you for helping me out. This was my first time buying anything on the Internet. I was skeptical at first but I figured I'd take a chance. This was the best chance I've ever took! My part-time business is now a full-time home-business, thanks to your

Creative E-mail System. I had to hire my two family members to help me out!
This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

============> E-Mail Databases <================

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your

advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

HI, Frontier Capacitor can rebuild your old can type electrolytics.
Sorry, I don't have the address with me - they are located in North
or South Dakota.

Hi Doug,
I have one of those keyers and had a small problem with it.
I was wondering if you could answer a question or two.

First, do you have the schematic to it?
Second, if the above was yes, then read on. otherwise, thanks for
getting this far :)

I had to replace the resistor that is in series with the B+ line
coming out of the xfrmr. I was just before the Half wave rectifier.

I did manage to get it fixed but not sure if I used the proper
componant.

It was charred but looked like it could have been a 10 ohm.

Does your schematic show this resistor and it's value? Could you pass
it on to me?

Much thanks in advance.

Prices include shipping in Lower 48.

MEDA uMAG-02WB Handheld, battery-operated digital fluxgate magnetometer. Sensitivity: +/-0 - 20.00 - 200.0 - 2000 milliGauss F/S, DC-400 Hz (-3dB @ 400 Hz ref to DC). Analog output +/- 2.000 V F/S. Linearity .02% or better. Absolute accuracy +/- 0.5% or better, traceable to NIST. With 10 meter cable and transverse probe, 6 spare batteries in storage case, multiple-battery harness for up to 8 batteries (approximately 12 days continuous operation), analog output cable w/BNC (to oscilloscope input), manual, calibration certificate, transit case. In new condition. Current price from manufacturer is $900. Sell at $500.

WALKER SCIENTIFIC 3D1. Handheld, battery-operated digital fluxgate magnetometer. Sensitivity: +/-0 - 20.00 - 200.0 - 2000 milliGauss F/S, DC-100 Hz (-3dB @100 Hz ref to DC). Analog output +/- 2.000 V F/S. Linearity .02% or better. Absolute accuracy +/- 0.5% or better, traceable to NIST. With 6 foot cable and axial probe, carrying case. Almost-new condition, $350.

DEXSIL MAGNUM 310. Handheld, battery-operated, micropro-cessor based 3-axis digital induction milliGaussmeter. Auto-ranging; 0.04-9.96 milliGauss (+/- 2%), 10 - 99.6 milliGauss (+/- 5%), 100-996 milliGauss (+/- 5%), 1.00 - 10.0 Gauss (+/- 5%) for 60 Hz signals in 60 Hz mode. F/S accuracy in 3rd harmonic mode is +/- 5%. In braodband mode (40-310 Hz @ -3dB) accuracy is +/- 10%. Displays all three vector components plus resultant or resultant only. Has low battery indication and automatic shutoff. Fully self-contained. WIth carrying case, manual and calibration certificate. Used, very good condition; $250.

MERLYN & NIMUE 900. Handheld, battery-operated single axis digital induction milliGaussmeter. 4 ranges; +/- 0 - 20.00 - 200.0 - 2000 milliGauss - 20.00 Gauss F/S. +/- 2% all ranges except 20 Gauss (+/- 5%). -3dB 20 Hz - 1.5 KHz. Fully self-contained, w/carrying case. Used, excellent condition. $125

LEEDS & NORTHRUP SERVO RECORDER 136-304-304-304-00-00-00-L0088-L0088-L0088-6-BV-000. Three-channel servo recorder, modified for potential inputs. Can be internally adjusted from +/- 1 millivolt F/S to +/- 2V F/S. Set at +/- 1V F/S. Chart speed @ 60 Hz 2cm/hr or 2 cm/minute (at 50 Hz = 1.67 cm/min or 1.67 cm/hr). Internal line voltage selection for

100/120 V, 220 V or 240 V. Power burden: 27 VA. Power input; 3-wire IEC connector. (Uses standard IEC cords). With 2 sets spare pens, 2 boxes charts, a few spare parts, NEMA (USA) line cord, carrying case; Used, good condition; $150.

UNIVERSAL IEC LINE CORD SET. Each 6-foot line cord has a standard female 3-wire IEC connector at one end, and a male connector at the other; one of each from the following list:

Australia 3-pin w/ground male pin
Denmark 3-pin w/ground male pin
Europe 2-pin w/ground female & strap
India/South Africa 3-pin w/ground male pin
Israel 3-pin w/ground male pin
Italy 3-pin w/ground male pin
Switzerland 3-pin w/ground male pin
United Kingdom Fused 3-pin w/ground male pin
USA/NEC/Japan (100/120V) 3-pin w/ground male pin

One of each of the known electrical connections in the world; 9 cords in carrying case, NEW: $100

Yeccch!
What is this TRASH RTTY signal tonight ALL OVER 3579 kHz ??
The darn thing is 10 dB over S9 here and has been on from about 9:00
pm to 9:45 p.m. EDST so far!

This stinks!
I have called CQ from 7 p.m. on and off and haven;t had a single reply
to my 25 watt Eldico TR-75 BA signal so far.

I can hear a VERY weak VA3 signal on there but it is below the RTTY
signal, and VERY QRS. ABout 6 - 7 wpm but can't get much of it....

What can we do?

Where are all the guys running 813 finals when we need 'em ??

I think its simply that an unbuilt kit represents an unreplaceable piece of the history of hobby electronics. No one in their right mind would collect unbuilt kits as a retirement hedge. But I think it would be absolutely grand to have an unbuilt NIB Heath DX-40 or Mohican or AT-1. Its value lies solely in its status as an artifact of a bygone era of electronics economics and packaging. Perhaps deserving some day of museum quality preservation and display.

As an assembled "whatever", it becomes just another one of many samples of the "whatever". Dime a dozen -- even if it is brand new with that delicious smell of a freshly built Heath product.

I guess its the same thing as finding a complete set of brand new, never opened, complete with dust jacket copies of Chapman's Radio Boys books from 1922. Useless. But something wonderful to save, preserve, and pass on ..

There are those who would like to "relive the days of yesteryear" by building such a found kit. I have to admit, it would be hard to resist, and I don't really take umbrage with the "build it" side of the argument. I've built a long forgotten number of Heathkits, and the building ritual itself is rich with pleasure. But at this juncture, I'd personally rather see the unbuilt kits preserved as kits.

From: spinner@usit.net
Message-ID: <336e825e.29737582@news.usit.net>
Source record: 120251

I just purchased a Knight reciever. No model number to be found but the s meter says allied radio. Need help with identification and operation.

There are nine controls across botton, S meter on the right, rectangular black window on left with the two round dials showing through. 2 large black knobs for tuning and a small control above tuning dial for antenna trim.

Gray cabinet. 10 tubes including the xtal calibrator.

QUestions. What model is it and any idea when made.?

It works very well but I don't know how to adjust the QX selectivity, QX tune and the Peak-Off-Null switch.

Is it possible to find a manual?

Was this a decent radio in comparision to Hallicrafters of similar circuitry?

Was thinking of selling it but enjoying so much, I may sell my digital instead.<G>

Thanks for any and all help.

Hello .. Name here is Jerry Babin (N5MCJ). The easiest way to get galena is to find a lipidary (hope I spelled it right, make that rock shop). You can make a holder for the crystal by finding a small piece of tubing (metal) that will fit your holder (I cut about an inch off the bottom of a "AA" battery with a tubing cutter, only be careful if you do that, batteries tend to be corrosive and can cause chemicle burns, wash it out real good). Break off a piece of Galena big enough to fit inside and fill up the rest with solder. Also, several places still sell Galena already soldered into a holder for about $1.00 (probably costs more to ship it than it's worth). I know that Antique Radio in San Diego sells both crystals and cat whiskers. I don't recall offhand who else sells them, if you can't find anyone, let me know and I will do some digging.
Good Luck
and 73 DE

Source record: 120254

When I was a lad, I traded for a chunk of lead galena about the size of my fist. I broke this up with a hammer into pea-size chunks. I drilled several holes about 7/16" in diameter and about the same depth in a piece of wood. I then melted old fishing weights and wheel balancing weights in a pot (wonder I did not get lead poisoning from the vapors!) and poured the molten lead into these holes in the piece of wood. Immediately, while the lead was still in a molten state, I carefully (with tweezers) placed a galena piece into the top of each lead hole. When the lead had cooled, I had a large quantity of crystals that fit my Philmore crystal holder perfectly. This proved so successful, I made a lot of these and passed them out to my school buddies who were all making crystal radios. I recall using the same wooden mold over and over, making a dozen or so crystals each time. This was in the late 1940's, when I was in junior high school.

YAESU 901 station accessories

I have a FV-901DM remote vfo (has up/dwn scan and 40 memory channels).
This unit is in new condition with orig box/manuals. Perfect not a
scratch. $240.00 including shipping continental USA.

Also for sale a SP-901P. This is the speaker/phone patch for the 901
series Yaesu. Comes with manual and orig box. It is also in new
condition. Price is $90.00 including shipping continental USA.

I have a Yaesu FTV-901R transverter with 2m and the optional 6m and 70cm modules in it. This unit works with Yaesu FT-901 and probably FT-902 rigs. Could probably be used on any 10m rig. Has offsets switch for FM repeaters and Oscar satellite modes (2m up/10 down etc). It is in original box with manual and all schematics. Physically it looks new inside and out. Not a scratch. I am selling it "AS IS" due to the fact it needs some work. I noticed on 2m the receive is very weak but xmit looks ok. On 6m has low output (5 watts) not sure about recv I don't have a 6m antenna. Never tried the 70cm module. I sold my 901 station and never had a reason to try to fix it since. Not sure if it is dirty relay/alignment or part tbl.
These units are very hard to find. Will sell the whole thing for $250.00 which includes shipping in Continental USA. One module is worth that much. It is really a "Mint" unit.

Message-ID: <862913963.814265@news.via.nl>
Source record: 120261

Hi All,

A friend of mine recently acquired a piece of surplus equipment, without any schematics or user manual. So now we are looking for info on:
Telefunken OSC TRAP, S.STEU 237/1 LP, 126165.

It is an oscillator 1 - 18 MHz for use in combination with a power amplifier and comes from the Belgian Army. Very heavy, very sturdy, would be nice to be able to actually USE it!

Any information is welcome: connections, schematics, service data....

Bart, PA3GYU.

There may be a NOSPAM. in front of my E-mail address. Please remove it in
your reply. It is there to fool machines, not people.

Source record: 120262

Gary -- I have never heard of a D-3 model Vibroplex but if you have an Original model within the 96K serial number range, black japanned finish and the pin striping is visible, and the nameplate is in good condx and the parts are original to the bug its value range is $100 - 200. IF it has a Vibroplex DECAL as well as the plate, it would be worth abt $50 more. IF it is a left handed model, maybe another 100.

Vibroplex prices are very variable and there is a great deal of confusion over what is rare versus what is very common. Most Vibroplexes should be worth less than 100 for the crinkle finish models - black crinkle being "better" than gray BUT specific models make a difference. The "best" Vibroplex's are the black japanned like yours - pre 20K serials the best. Certain models are rare and desireable: Double Lever, Model X and Vertical or Upright ("wirechief").

There is a point to building an unbuilt kit: you will have a NEW, WORKING 19xx Peanutwhistle-whatever in 1997. Hard to beat for looks and pride of ownership. I am not very sure what one does with an unbuilt kit-besides stare at the box and congratulate yourself on how much money it is/will be worth. If you have a museum you can spread it out on display... that'd be great. But for me, I cannot see letting it lie around in the box simply BEING an UNBUILT kit. Big Deal.

I do see the point about historical preservation; that is one aspect of the "kit building" days that you don't see when you look at something like a Heathkit that was put together years ago, as opposed to an unbuilt kit.

I guess it's a matter of what you like to look at. I can see something like stamp or coin collecting, where the intent from the get-go is something that is put on display for the purpose of being viewed. It's just that I have a hard time believing that the Heathkit guys ever envisioned the products being sold but never built... just seems like such a waste to see equipment that will never be put to the use it was originally designed for, that it was really intended to be built and used.

Apparently the same sort of thing goes on with Estes/Centuri model rocket kits from the 1960s/early 1970s, that being the desire to keep the kits unbuilt, for historical reasons.

Too bad the kit companies of yore could not stay in business. I managed to build one before they disappeared, an SW-717 (?) ...can't remember the model number for certain. It was the inexpensive 4-band desktop receiver that Heathkit sold in the mid-1970s. Got it working on the third or fourth try, too! :^)

Thank you all for the enlightenment...

C.K.

Why don't you post some representative types (half a dozen or so) so
people will know if there's anything other than series string TV tubes
from the 1960s in the lot. I assume you are going to sell these "as is"
with no guarantee; if so you should state that.
My preference would be for stating a fixed price rather than a "best
offer". I seldom bother to reply to the latter.

Bet of luck,

John Michael

No rabid reaction from here, Bob. In my own straw poll over the last seven years I guess I've found many more hams buying, using, and preferring unmodified equipment than "curators" interested only in the history, or in aircraft restoration, though I have certainly met and can appreciate the viewpoint/passion of both. I started out as a teenager in 1955 with a 7-9.1 ARC-5 TX, but I remember it made me feel sad to drill any holes in that piece of history, so I didn't! ...made all the necessary changes without making a single permanent modification. I still personally prefer to find a piece of surplus gear without new holes drilled in it, but I don't mind internal wiring and other changes as long as they are correctable.

While some of the conversion articles contain good information on pinouts, etc., the big problem in my opinion (worth <2 cents) is that much of the conversion substance printed in the ham literature over the years has been by well meaning but technically ignorant folks who had no measurement capability for all the "improvements" they espoused...witness the undeserved thrashing of the BC-191/375. My samples suggest that a significant number of these modification articles were of the "seemed like a good idea at the time" sort, and performance was measured by emotion and questionable signal reports, not by credible instrumentation. If you'll take quick tour through the conversion articles of the period 1946-1968, you'll quickly see what I mean.

The original designers of this gear were not hobbyists tinkering in their garages...they were often leaders in technology improvements during the era. For that reason I tend to be skeptical of modifed circuits that were originally optimized by the same perfectionist spirit permeating every generation of engineers I've ever known or read about. That doesn't mean that developments after the war (like a cascode front end) can't be carefully designed and installed, but it takes a bit more study to do this

in a way that really brings about improvement, and many hams don't have that kind of patience or the test equipment necessary to validate the improvement. I don't claim this is the only force driving the originality buffs, but it is certainly a factor in my own interest. ...just another data point for your survey.

Having said all that, I know a growing number of hams who are into looking *only* for modified surplus, and having a ball doing it! It lets them try all sorts of things without fear of destroying a classic.

Source record: 120275

Hello filament fans,

I recently purchased an Precision E-310 Sine/Square Wave Generator at an auction. It appears to generate freq's uo to 15Mhz. At least that's what it should do -- right now it doesn't do anything except light the filaments and pilot light. The only obvious problem is a small 3 Watt, 120 volt bulb mounted on the chassis is burned out. It's not a pilot lamp.

I vaguely remember reading somewhere that some signal generation gizmos of old used a light bulb somehow. Maybe as part of the oscillator. This bulb's glass envelope has a unique tall shape with a screw-type base. (same size base as a small screw-base Christmas bulb) There's no ID on the bulb except 120v, 3W and a letter "K" within a circle.

If anyone could shed some light on the unit, the bulb, or anything else at all, I'd really appreciate it.

73,

Paul K0PW

3882. Tubes vs. Transistors: Better Performance in Rcvrs??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-06 00:00:00 UTC
From: jupiter@europa.com
Message-ID: <jupiter-ya023580000605972131530001@news.europa.com>
Source record: 120278
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Saw this thread in boatanchors and couldn't resist when I saw Mr. Newkirk slamming tube technology in receivers.

The real question that should be asked is:

Given the performance of designs published in the latest two ARRL Handbooks and even in the 1977 Solid State Design for Amateur Radio book; how can the ARRL with a straight face give favorable reviews to the latest Japanese transcievers with such mediocre basic receiver performance? I would be embarrassed.

When you look at IMD with preamp on, these $5000 units are years behind the state-of-the-art in basic receiver performance. I would bet any amount of money that in many multi-multi contest situations, Wes Hayward's 1977 DC receiver designs could receive signals that the so-called modern transceivers could not.

But back to tubes- Ulrich Rohde publised an article in QEX (April 1993, p. 11) where a tube receiver sported a +30dbm intercept. Clearly, there is great potential for high performance tube receivers, where uP/computer based features are not an issue; or for tube front-ends in some hybrid receiver. Who cares about memories and DSP in a contest situation where your front-end is being crushed??

One of my future projects is to implement an H-Mode mixer with nuvistors; and install it in my R4-C. I currently have an SD5000 module that plugs in to the first mixer, but the impedence conversion from tube to solid state adds too much loss.

Rob.

wow... i was just reading about this today! in the '67 ARRL amateurs'
handbook it says:

"The 3-watt lamp in this feedback loop acts as a variable resistance to
control the oscillaion amplitude and thus maintain the operationf
conditions at the point where the best waveform is generated. This
operating point is set by the "oscillation controll"...

the lamp is hooked up between the two cathodes of the 12AU7, then to an
attenuation circut (different value resistors in series with the lamp),
then to the volume control, and output.
If anyone would like the schematic, email me & i'll scan it in.

Hope this helps,
Mike D.

>> how do command sets and other W.W.II surplus items fit?

My 2 cents...

I was BLASTED by flames last year when I had the 'nerve' to ask for suggestions on using an already heavily modified ARC-5 receiver (BC-455) as a tuneable IF, along the lines of the early CQ articles. If I had one angry collector write, I had ten, all saying 'if you want a performance receiver, buy a Kenwood or something...' when I had NO illusions over the performance of such a rig. I merely wanted to follow, as you have said, the history of Ham Radio - NOT the history of WWII! Had I been restoring a bomber, maybe my view would have been different.

Geez, to restore mine to their original state would take a hell of a lot more parts, labor and effort than it would to just hunt down a collector wanting to sell his 'pristine' unit. So would the collectors rather I let THEM gut the things for parts for THEIR restorations, as 2 of them 'offered'? I'm sorry, but I don't see an improvement there! Talk about hypocrisy. What I was suggesting wouldn't destroy the radio. What they were suggesting would.

I still have the ARC-5's (BC-454, BC-455, and BC-946 broadcast band) and have done nothing with them. I was made to feel like a scoundrel by so many folks that I just went on to another project and forgot about it.

It's just a hobby....

I vote that if it's already hacked, hack away! If it's new in the box or still has the dynamotor on the back, sell it to a collector and get a hacked one to play with!

Funny you should mention that. I found myself working as a young
fresh-out
engineer at Aircraft Radio Corp (then a division of Cessna Aircraft) in
1984
when ARC was shut down and the product line was sold off to Sperry. In
the
process of 'cleaning' out one of the old engineering buildings, we came
across
the stash Engineering Notebooks dating from the '20s to the '50s. I
recall
spending an afternoon reading through them, facinated at the technology
that
existed at the time. Things that would require a computer nowadays was
done
with gears, cams, and levers -- all very elegantly.

Just to let the topic drift a little...

In the rafters of another building, someone found equipment carefully
stacked
(I can't recall the types) in the wrapping paper. The story that I got
was that the gov't contract required every 100th unit to be retained for
a

audit at some future time... a time that never came. I was told that
the
equipment (and the lab notebooks) were boxed and sent to the
Smithsonian.

I probably could have gotten an ARC-5 still in the wrapper... Oh well.
My first receiver was a BC-454 - and it was cool just being there.

Can anybody confirm for me what WWII equipment was built by ARC in
Boonton?

I get a kick out of these. The S-120 was the first shortwave receiver I ever owned and the first thing I ever bought on time payments. Was in junior high and washing pickups and crummies on Saturdays for Thompson Logging in Poseyville (Roseburg) and bought the Hallicrafters at Wards for $69.95.

Now days when I pickup one or a similar model I recap it and get it working, then take it to the hamfest and put a fairly heavy price on it. If some young kid about 11-15 comes by wanting a shortwave receiver I make them a very good deal (how much you got in your pocket...). I figure I get more out of it that way than getting $55 for one of these old 4 tube upgrade of an all american 5.

If someone wants to give $250 for one, well, that's there money. I figure I got more for mine.

Source record: 120284

I didn't get any replies from r.r.s. so I thought I might try here. I picked up one of these to help with my alignments on my boatanchors but it doesn't work. It does read the base crystal frequency so I think the problem is in the input stages. This almost certainly is just a basic design so if someone could make me a copy of a similar counter that may help...or if someone actually has the schematic/manual for the 3500. Any help would be great.

I have a Hallicrafters HT-37 transmitter for sale. Condition is as follows:

Works but with external homebrew power supply (original PS xfmr removed). Some knobs on the front replaced with RS units. Inside dusty. Case needs paint. Front panel good.

Could be a parts unit but could also be gotten back to original condition by a bit of dedication.

Paid $75 for it to get a fellow ham out of a jam. Looking for $45 plus packing and shipping from Houston.

Thanks....Rick nexus15@flash.net

Can someone shed some light on the value of this speaker console..
I know they are big bucks when mint, but this one is beat.
It still has value though.
It is the speaker console with the light, rotor control, clock.
The bad parts are.. The wattmeter is missing
The bulb is broke in a bag, and one of the bakelite bulb sockets is
cracked.
The bulb shroud is there, and it is bright chrome.
It has two power chords. Perhaps one for the clock and one for the
rotor??
The clock, by the way works great.
And the cabinet is in great shape.
There is also an extra front perforated grill. I believe it came with
it to allow for customizing??
..Thanks...Dave

To keep the bids "rolling", I have a pristine S120 here (no kidding) that I'd part with for +/- about $500 U.S. Any takers out there in Lotus Land? Ya know, these things have much sentimental value to some folks.

> Saw this thread in boatanchors and couldn't resist when I saw Mr. Newkirk
> slamming tube technology in receivers.

Come, come. I was comparing the two and pointing out that solid-state technology is the appropriate technology for all but a very few mission-critical modern radio applications.

> The real question that should be asked is:
>
> Given the performance of designs published in the latest two ARRL Handbooks
> and even in the 1977 Solid State Design for Amateur Radio book; how can the
> ARRL with a straight face give favorable reviews to the latest Japanese
> transcievers with such mediocre basic receiver performance? I would be
> embarrassed.

The way I see it, the real question that should be asked is:

Why do observers continue to mistake the performance of particular implementations of a technology with the performance possible with the technology?

(A second question is why an adherents to a particular technology becomes sufficiently emotional to ascribe the verb "slamming" to the act of comparing another technology to a pet technology when the pet technology happens to finish second best. ;-D)

Of *course* particular implementations of solid-state technology, especially those designed to cost for consumers, may not exemplify the best that can be done for mission-critical work. The receiver mentioned next--

> But back to tubes- Ulrich Rohde publised an article in QEX (April 1993, p.
> 11) where a tube receiver sported a +30dbm intercept. Clearly, there is
> great potential for high performance tube receivers, where uP/computer
> based features are not an issue; or for tube front-ends in some hybrid
> receiver. Who cares about memories and DSP in a contest situation where
> your front-end is being crushed??

--is an example of this.

But take a closer look, please. I've listened to the BBC and amateur signals on one of those receivers--a Rohde and Schwarz EK-07D. Yes, it had an excellent front end. It was also so heavy that I had to have two neighbors help me lift it up our stairs. Its heterodyne detection ability was poor compared to our modern "product detector" radios--there was a lot of distortion--and the appropriate selectivity choice in that particular implementation was a bit too round for SSB. (Apparently an optional SSB adapter was available that processed signal from the radio's second IF output [300 kHz] with better selectivity and good "product" detection. And revised IF-amp modules were apparently available later in the EK-07D's life to improve on the inboard selectivity.) *And* it drew something like 140 W from the ac mains. But, as a superb work of industrial art, an EK-07D is a privilege to use.

Of course, I've been describing only one particular implementation of tube technology. But I reiterate what I said in the boatanchors group: In all but a very few applications, thermionic technology is not the appropriate technology when you need the best modern radio performance possible. I can't think of a single consumer-oriented radio-reception application, including amateur radio contesting, in which solid-state technology is not the appropriate technology. (That manufacturers designing to cost--especially manufacturers who market incremental modifications of existing implementations in differently shaped enclosures, with different user interfaces, as "new" to get consumers to re-buy--might produce widgets that don't achieve what's possible with the technology isn't surprising or unusual. Most vacuum-tube gear produced for radio-amateur use represented what was possible in tube technology just as poorly.)

Yes, it's possible that you can make a better vacuum-tube front end than the solid-state front end in a consumer-intended radio. But not if the solid-state front end to which you compare it represents the best that's being achieved for military and professional communication in 1997.

Regards,

David Newkirk, W9VES

> Question...which wattmeter would you believe, and...
>

> Dale
> KC8FAQ
Hi Dale,
I wouldn't automatically believe either one. Wattmeters of that type are typically only accurate to about 20%.

The way to test your tubes is to see how easily the transmitter loads into a 50 ohm load. If it loads to near 230mA with the loading control set at the 50 ohm position, and with a few mA of grid current, then the tubes are fine. The power output will depend on the band, but typically will be about 110-120 watts on 80 meters, and decreasing somewhat at higher frequencies.

I've never encountered a gassy 6146 and so long as the tubes aren't glowing bright blue I think you need not worry about the possibility.

Epilog

Credit - Rick Stealey K2XT got rec.radio.amateur.boatanchors created
as an official newsgroup. The original boatanchors e-mail list was
created by Jim Lockwood KM6NK, and is currently managed by
Jack Hill W4KH -- its high signal-to-noise ratio should be
an inspiration.

Much of this FAQ was put together by John Brewer WB5OAU/4 for
the original boatanchors e-mail list. Other info has been gathered from
various sources by Michael Crestohl W1RC and Nick England KD4CPL.
A big Thank You to all who have contributed !

Disclaimer - While we believe this info is reasonably correct, all
responsibility for use of this info is yours, not ours.
BE CAREFUL - Boatanchors are heavy and contain lethal voltages !!

Why Boatanchors ?

Some may question the desire for 80 pound receivers and
100 pound transmitters, both with filaments sitting there
getting hot and wasting power in this day of microprocessor
based, mega-memoried miniaturized transceivers! Although
modern radios are extremely good at what they are designed
to do, they are about as interesting to operate as a
toaster oven. They have no soul.

Additionally, many find a zen-like feeling in taking an
old, misused ratty old radio and carefully restoring it
back to health. Like cars of the era, boatanchor radios
were made to be worked on, modified, and tinkered with.
Many think of it as Real Radio in this era where fixing
a transceiver is accomplished by boxing it up to send to
the manufacturer for a custom VLSI chip replacement.
Indeed, a warm soldering iron is almost a requirement
for operating a vintage station.

Others claim that boatanchors SOUND better than their
silicon descendents, and this is generally true. The
audio from a Hammarlund or National receiver, or a
Johnson transmitter can sound much better than the
300mW audio coming out of the 2" speaker in the
typical transceiver.

Watching the flicker of 807 modulators in a Viking I
as you speak into a D104 mic, is certainly more stirring
on a winter night than considering hole and electron
flow.

If truth be known, much, if not all of the above, although
true, are merely justification for the insatiable hunt
for more and more of these old boxes, simply because they
are just too NEAT to have and operate!

What are Boatanchors?

Big. Heavy. Old. Fun.
"Boatanchor" is a fond term for vintage tube-type ham radio and
communications gear. Manufacturers like Hallicrafters,
Hammarlund, National, Johnson, RME, Heath, Collins, etc.
made this gear roughly through the mid 1960's. Also included is
tube-type military radio gear, homebrew gear, station accessories
like microphones and keys, and test equipment of that period.

What is this newsgroup for?

The polite discussion of boatanchor related topics:

Restoration, Repair, Operation, Collecting, Historical info,
Parts sources, Legends and Lore, Vintage operations,
Vintage station accessories (keys, mikes, etc.)
Boatanchor ONLY buy/sell/swap

Who is welcome here ?

ANYONE interested in Boatanchors.
Hams, Non-hams, SWLs, military surplus fans, etc.
Newcomers, old-timers, thrill-seekers.
Men, Women, Boys, and Girls of all ages.
Commercial posters sticking to boatanchor topics

What is this newsgroup NOT for?

Newer equipment (use rec.radio.amateur.equipment)
Vintage broadcast and phono gear (use rec.antiques.radio+phono)
Vintage audio gear (use rec.audio.tubes)
Vintage solid-state gear (try the VSS list -
Send e-mail to listserv@fablotz.min.net.
Put "subscribe vss" in the message body)
Homebrewing with modern technology (use rec.radio.homebrew)
Non-boatanchor buy/sell/swap posts (use rec.radio.swap)
Antennas (use rec.radio.amateur.antennas)
General ham info (use rec.radio.amateur.misc)
Code vs No-Code (use rec.radio.amateur.policy)
Flames (use alt.flame)

Where can I find out more about Boatanchors?

Book Summary - courtesy of Michael Crestohl, W1RC w1rc@amsat.org
---
1. RCA Receiving Tube Manuals. I have several editions in my library because older tubes were deleted and newer ones added between editions. I won't list all the tube manuals in my library but they are spaced out over three-four year intervals. The latest one I have is RC-25 which is dated 1966 and has 607 pages. Availability: Hamfests & shows $5.00 to $15.00

2. RCA Transmitting Tube Manual - 1962, 320 pages includes the lineup of transmitting tubes including the venerable 807, 6146, 811A, etc. Availability: scarcer than the Receiving Tube manuals but I've seen them around - $5 - 15.00

I believe both these manuals have been reprinted and are sold by AES in Tempe AZ.

While on the subject of tubes....

3. Tube Lore, Ludwell Sibley 1996 ISBN: 0-9654683-0-5 $19.95 available from author (Flemington NJ 08822). 186 pages. Excellent reference source on the subject written for collectors and vintage radio buffs. Features cross-reference on tube types and general essays on tubes.

4. Elements of Radio, (William) Marcus & (Abraham) Marcus. 3rd Ed. 1953 771 pages. Prentice-Hall Library of Congress Catalog No. 53-8544

A classic text that focuses on radio receiving theory. Very well written and presented. Good first text on BA technology. Availability: Should be easy to find at any vintage/antique radio show - $5 - $20.00

5. Radio Servicing - Theory and Practise, (Abraham) Marcus, 1954, 794 pages, Prentice-Hall. Library of Congress catalog number 53-9729. A good second text that follows on Elements of Radio. Quite thorough in its coverage. Availability: same as Elements of Radio.

6. Elements of Radio Servicing 2nd Ed. (William) Marcus and Levy, 1964, 566 pages. McGraw-Hill Library of Congress catalog number 54-9698. Its very interesting that the "other" Marcus collaborated with another author to write a similar book. As with Radio Servicing - Theory and Practise it is focused on radio receivers with emphasis on broadcast radio repair and troubleshooting. Availability: same as Elements of Radio.

Here are four US Army TMs that I think are really good for learning about Boatanchor technology: I found these to be of particular help when learning about this stuff back in the 1960s.

TM11-4000 - Troubleshooting and Repair of Radio Equipment. April 1958, 177 pages. R-390 enthusiasts will especially want to get this book if they can as it uses that receiver as the "sample", although not actually identified as such. As it was written for soldiers it is clearly presented and covers receivers and transmitters. One of my favorite texts.

TM11-662 - Basic Theory and Application of Electron Tubes. February 1952. 215 pages.

TM11-664 - Theory and Use of Electronic Test Equipment. February 1952. 158 pages. Covers meters, tube testers, signal generators, etc. One of the neat things I like about this book is it details the venerable mil surplus test gear like the URM-25D, TV-7(*) and other equipment of the era. Very important book for any BA fan.

TM11-665 - CW and AM Transmitters and Receivers, Spetember 1952, 274 pages. Another essential book to have. Title is self-explanatory. Another personal favorite.

On availability: These may be found for a few dollars at flea markets and vintage shows if you're very lucky. They are otherwise hard to find. I don't know if they are available through NTIS. I've seen them go for $15.00 to $20.00 a copy. They're well worth it.

There are other military TMs that teach DC, AC theory, antenna/propagation, power supplies, etc in this series but I have omitted them because they are really generic and not Boatanchor-specific. However, if the editor feels they should be included I will be glad to provide a description of them. The Navy also has an excellent set of manuals that accomplish the same purpose and are quite excellent as are all Navy technical manuals.

Finally, there's Fundamentals of Single Sideband published in 1959 by
Collins Radio Company. This book is quite technical and detailed on
the subject written by the engineers who designed and developed SSB.
There is not a picture of any of their amateur line in the book although
the theory certainly applies to any filter-generated SSB transmitter.
Its about 200 pages with lots of charts and diagrams. Availability is
very scarce and I've seen them priced from $50.00 and up. I believe there
was a reprint in the 1970s and these may be found at a much lower price.
The original is a large paperbound book with bright yellow covers.

The titles above only represent a portion of my radio library and I have
selected them as my favorite books of interest to Boatanchor enthusiasts.
I have several other titles from the 1940s and earlier but did not list these
as I do not feel they meet the criteria for this purpose, ie: the
technology is pre-BA and falls more into the realm of antique equioment.

Copyrighted 1997 by Michael Crestohl. Permission to reprint granted
provided credit is given.

Where do I find Boatanchors on the air ?

HF AM hangouts - 1885, 1995, 3885, 7295 KHz (East Coast of US)
1925, 3870, 7295 KHz (West Coast of US)
14.286, 21.40-21.45, 29.0-29.2 MHz

HF CW hangouts - lots of places, particulary 3579.545 KHz

VHF AM info
http://rob.acol.com/wwwboard/radio/ham/vhf-am/

6m AM - 50.4 MHz

2m AM - it varies, 144.4 MHz is common

How can I practice Safe Boatanchoring ?

This is a genuine concern! Boatanchors have Real Voltage
present in them! Lethal voltages. You will find that
capacitors really DO store charge! None of this wimpy
12 volt stuff!

Get back in the habit of discharging any capacitors that
are lurking under the hood. Keep one hand in your pocket
when working on a hot radio. Be REAL careful and THINK THINK

THINK before twiddling with a boatanchor that must be
powered up and worked on.

It is SO easy to get used to working on solid state equipment
and not worrying about Real Voltages... don't do this!

Also, many older radios are not fused... receivers are good
examples of these. I generally replace the line cord
(they usually need it anyway) and either put an in-line
fuseholder, or some of the Heath-type fused plugs in the
radio. Better still, replace the 2-wire plugs with a more
modern 3 wire plug. Barring that, ensure that you strap
every cabinet with healthy sized cable, to a common
station ground. This will prevent _you_ from becoming the
cable between two pieces of gear at different cabinet potentials.

Fires are nice to have burning on winter evenings
but not when they are on top of your operating desk.

Speaking of operating desks, you will become good at carpentry
if you spend much time as a boatanchor operator. You will
quickly discover that the table you used to operate your
tranceiver is way too small, and waaayyyy too wimpy to support
a growing boatanchor station!

How do I restore a Boatanchor ?

This subject could easily fill many pages.
There is a lot of really good info from Hank Van Cleef in the
rec.antique.radio+phono FAQ:

http://www.cis.ohio-state.edu/hypertext/
faq/usenet/antiques/radio+phono/faq/top.html
ftp://rtfm.mit.edu/pub/usenet/
rec.antiques.radio+phono/

Below are just some common topics.
The newsgroup is a good place to ask about other issues.
Remember the radio that stares at you from
your bench is old. There are not many around. Take that into
consideration as you proceed through the process. If you
erase the dial marking on your receiver by cleaning it
with Windex, you likely will not find another at Radio Shack.
Take your time and enjoy. The journey to a working boatanchor,
like life, is the _point_ not a process. You will say less
nasty words if you take your time.

Some general restoration tips:

* Check fuses before powerup. Many 'anchors will have the
wrong value fuse in it. Checking the fuse before purchase

is a good thing to do too. If it's open, you at least know
what you are getting into.

* Check the resistance from power line to chassis before
powerup. Most boatanchors have bypass capacitors from the AC lines to
chassis and these sometime have deteriorated. Replace with caps made
for AC line bypass applications (available from Digi-Key, etc.)

* Power up old radios gently. Plugging it into the wall and
turning it on is not gentle! Bringing it up slowly to operating
voltage with a Variac so that electrolytics can "form"
is gentle.

* Don't trust that the tubes that are in the sockets are the
correct tubes. Check them against the schematic. If you
don't have a manual (and even if you do) note which socket
the tube came from so that you can replace them correctly.

* Don't clean tubes with water. The marking on the glass
will likely come off with one good swipe of a water dampened
cloth.

* Assume many electrolytic and paper caps are bad. Check them.
Paper caps should read "infinite" ohms on your ohmmeter.
Electrolytics should read a very high value after settling.
Paralleling a known good electrolytic is often a good way to
check an electrolytic.

* Check high resistance, and high wattage resistors for
correct value.

* Nifty tools to have are flux brushes, for cleaning nooks
and crannys. Windex is nice for cleaning chassis.
Qtips are good to have too.

* NEVER clean dial markers or drums. If you do, assume that
they will wipe away never to be seen again. You WILL say
bad words if this happens!

* WD40 or Scotts Liquid Gold (my favorite) applied to a clean
wrinkle finish will do a great job of restoring the lustre.
Works well for knobs too!

* Never use WD40 or Scotts Liquid Gold on anything until you
have tried it on a non-visible part of the cabinet to make
sure it won't dissolve anything.

* It is a poor job that doesn't require at least one new tool !
From Ed Zeanski-
- adjustable knurl wrench for removing knurled toggle switch
nuts -
Techni-Tool Phone 215-825-4990

Aren't tubes and parts impossible to find ?

Nope - there are lots of tube dealers attending hamfests and
antique radio swap meets, and selling via mail order. Besides,
there are lots of 50 year old tubes out there working just
fine.

Fortunately, hams are notorious packrats and parts suprisingly
abound, for old gear, particularly at hamfests (and in the
boxes under the table as mentioned earlier). Word of mouth
once again will work wonders at getting tubes, high voltage
caps, and the like shoved in your direction. Beware that this
is an addiction, and boatanchor radios, parts, and periodicals
will soon overrun all available space. Trust me.

Where can I get tubes and other parts?

What type of Boatanchor should I get?

This is a question that has as many answers as there are
individuals. Generally, as a "starter" boatanchor, 50's
vintage gear is probably the best way to go. Radios in
this era are quite desirable, but often times won't require
extensive surgery to get repaired and on the air.
A radio from a well-known manufacturer is also a good
choice... for receivers, look for Collins, Hammarlund,
Hallicrafters, and National are all good radios. In the
transmitter space, Collins, E.F. Johnson, and Heathkit (with
certain reservations) will do well.

Transmitters with plate modulated AM are the more desirable
units. Prices will generally reflect this.

Good "starter" transmitters include, but are not limited to:

Johnson: Ranger I or II/Viking I or II/ Valiant/500
Collins: Any 32V series.
Heath: Apache, DX100A or B
(my AM bias is showing!)

"starter" receivers include:

National 183/183D, HRO60 and MANY others
Hallicrafters: Many SX series.
Hammarlund: HQ129, HQ150/160/170/180, Super Pro series, many
others.
Collins: any 75A series.

By "starter" radio, I do not mean to indicate the cheapest! Most
of these radios would also be on the "best" list. I selected
these as they _are_ some of the best, and when one is starting
anything, it is good to get the BEST stuff available, rather
than getting junk and getting discouraged with it. There will
be enough to learn (or remember!) without having to compensate
for marginal equipment (was that 'Peak the plate and dip the
grid, or the other way around??')! Any radio from this list
will do the job for some time, and make operating a pleasure.

Where can I find Boatanchors for sale?

The best way to find a boatanchor is to let other hams in
your area know you are interested in them. Often times
I have been given a boatanchor, because the former owner
has relegated it to the garage or basement. This is also
the cheapest method. When attending a hamfest, ask some
of the sellers if they have any for sale. Often times
sellers won't bring such stuff, as it is HEAVY and is
perceived as not being sellable. Look under the tables,

and in the back of the sellers displays for them! While
you are under the tables rummage thru the boxes of parts
found under there for parts that will come in handy restoring
your new-old treasure. Tubes, high voltage caps, vintage
microphones and connectors may be found lurking here!

If you are in a hurry (and have money) ads in Electric
Radio magazine, the Ham Trader Yellow Sheets,
or your local packet BBS are good places to look. Expect to
pay more through these outlets. Also expect to become an
expert in UPS shipping rules. Boatanchors are heavy, and
often the cost of shipping one can exceed the cost of the
entire unit.

EPILOG

Don't look as boatanchors as an investment. Get a really grimy
specimen and clean and fix it, and coax it back to life. Turn
it on with the rest of the room lights turned off. As it warms
up look into the insides and see the orange glow from the filaments
and the purple fire from the 866's. Watch the giant S-meter
come to life, and the dials emit that soft light, framed
by your carefully cleaned and waxed cabinet. Rotate the
knobs that are of sufficient size and layout to permit
easy, flywheel smooth adjustment.

Maybe tune to the BBC on your NC-183.... watch the S-meter
climb as the full audio comes out from the 6 watt output stage
as you crank back the RF gain. Fiddle with a few more knobs
(boatanchor operation does not need to be a passive experience)
to get it set just the way you want it.

Then you'll know why boatanchors are such pleasent
things to own. Like mine, your transceiver may become a
very expensive frequency counter and RF generator used
to align the 'Real Radios'.

This model was advertised as both the Y726 and later as the R-100.
early versions had a tan paint scheme and later ones the gray scheme.

The R-100A had exactly the same circuitry but with the new two-tone
black/silver paint job to match the T-150 and T-150A. The antenna trimmer
knob was relocated on the R-100A too.
The R-55, R-55A, and T-60 also shared the new style paint scheme.

From: jupiter@europa.com
Message-ID: <jupiter-ya023580000705971139530001@news.europa.com>
Source record: 120214
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

:The way I see it, the real question that should be asked is:
:
:Why do observers continue to mistake the performance of particular
:implementations of a technology with the performance possible with the
:technology?

They are not "mistaking" they are "lamenting", since they are paying $3000 to $5000 for it! Duh. If I can build a homebrew radio for a couple hundred bucks that outperforms those with stratospheric prices, I'd say thats reason enough for concern.

I was going to buy an new Icom 775 a year ago, but I just couldn't do it, knowing I was supporting mediocrity in receiver design. If I was going on DXpeditions, I would surely buy a new compact transceiver, but in my case it made absolutely no sense.

:
:(A second question is why an adherents to a particular technology becomes
:sufficiently emotional to ascribe the verb "slamming" to the act of
:comparing another technology to a pet technology when the pet technology
:happens to finish second best. ;-D)

Actually, I am an adherent to a particlular level of quality- one that I haven't seen in a long time. Here all my receiver design is done with solid state. I really need to go out and get those nuvistors though. I do have a tube audio amp that I built from scratch, and my old Drake gear, that I am continually trying to improve by adding DMOS and other crap, and then putting it back into its original state.

:
:Of course, I've been describing only one particular implementation of tube
:technology. But I reiterate what I said in the boatanchors group: In all
:but a very few applications, thermionic technology is not the appropriate
:technology when you need the best modern radio performance possible.

An opinion. But since no-one except linear amp manufacturers do much with tubes anymore, its an opinion likely to stand forever in the minds of most.

:can't think of a single consumer-oriented radio-reception application,
:including amateur radio contesting, in which solid-state technology is not
:the appropriate technology. (That manufacturers designing to
:cost--especially manufacturers who market incremental modifications of
:existing implementations in differently shaped enclosures, with different
:user interfaces, as "new" to get consumers to re-buy--might produce widgets
:that don't achieve what's possible with the technology isn't surprising or

:unusual. Most vacuum-tube gear produced for radio-amateur use represented
:what was possible in tube technology just as poorly.)
:
:Yes, it's possible that you can make a better vacuum-tube front end than
:the solid-state front end in a consumer-intended radio. But not if the
:solid-state front end to which you compare it represents the best that's
:being achieved for military and professional communication in 1997.

I can concur with alot of this. However, what worries me about the state of commercial ham equipment today, is that it is so co-dependent (one of those psychobable words implying pathology) with the "dumbing-down" of the amateur population. Nowadays there is little reason for alot of people to really learn much of anything about electronics, and I'm not talking about memorization.

Finally, thermionic technology may indeed end up the RF technology of the future. I read an article where an IC manufacturer was working on integrated circuits using microscopic vacuum tubes with field emission cathodes. (because the geometries are so small, electric fields are high enough to strip electrons off the cathode at room temp). Because there are worried about secondary carriers, and electron transit time is so fast, these may indeed end up the fastest IC active devices ever produced.

This is fun. My account may expire at the end of the week, as I am considering going to ISP where articles don't have a 24hr lag time to cache, so please don't email responses.

Thanks, Rob.

I have a question on the behalf of a friend of mine.
How do you connect a serial communication interface (cable) to
an ICOM IC-P2E? I have two cables connected from the radio (mic and
speaker) to the modem. I have a Baycom micro-modem, that is connected
through a 9 pin serial con. I wonder which treads from the two cables
should be connected to which pins (in the 9 pin serial)?

My records are probably not complete, but I have contracts listed here
for the RAT, RAV, ARA/ATA, SCR-274N, and ARC-5. I know they branched out
of pure comms at the end of the war, because I have some APR-9 ECM receiver
heads here with the famous "CBY" mfg code on the tag.

A friend of mine gave me an old piece of equipment manufactured by RCA Manufacturing Company, Inc. It is nomenclatured "Station Allocator" and its stock number is 171.

Inside it is a power supply and a 1R5 pentagrid converter tube which appears to be functioning as an oscillator in the range of 470-100Khz with eight selector switches to select a particular frequency much like that used in old radio pushbutton tuners. There is also a switch to select AM or CW. There are two outputs and no inputs to the device. The outputs seem to be two different signal levels of the same signal.

Does anyone recognize and know what this little box was used for?

Would you like to learn electronics? You have alway wondered how it's working? You want to be able to repair your own electronic devices? Do you think that it's necessary to go to high school to understand electronics?

If you answered yes to one of those questions, don't search anymore, the Injunior Club is there. Injuniors Club offer the possibility to learn electronics by yourself and for low cost. Based on new technologies, the Injunior Club offers a variety of products that permits you to explore and discover by yourself the wonderfull world of electronics. Soon the Injunior Club will put to the market a serie of CD-ROM that will tech you in simples terms the basics of electronics.

The Injunior Club promotes the contact between its members. Each members will have access to a directory of other active members. The member will be able to discuss the difficulties and trouble he encounters with other members. An online service on the internet is also avaliable. The members will be able to consult one of or technician in case of a trouble with one of our product

IF YOU WANT TO DISCOVER ELECTRONICS, INJUNIOR CLUB IS FOR YOU!!!

Date: 1997-05-07 00:00:00 UTC
From: docdc@ix.netcom.com
Message-ID: <5kor16$gav@dfw-ixnews4.ix.netcom.com>
Source record: 120289

I have a KWM-2 that was stored in the original box for many years. I am getting 70-90 watts out depending on the band using the 312-5B wattmeter. My MFJ 3 KW wattmeter reads 90-110 watts depending on the band. In other words, the MFJ is consistently 20 watts higher. I was going to change out the finals and see if that would bring the output back up. I was told that the 6146 tubes may have become gassy.

No one has ever played inside of it.

Question...which wattmeter would you believe, and...

Are the 6146's A's or B's.
Do they need to be matched?

Any other comments would be appreciated.

No, it's not for sale.

I am not sure if this was comments to my note? My note concerned RF amplifier - it did not cover the mixer.
I am aware that thermionic technology may not provide for receivers having 50dBm or higher intercept point, but a single transistor wouldn't neither!
On the other hand does not application of valve technique mean that you have to apply something which was wellknown in 1950. It has been developped some better valve amplifiers lately, but mainly for audio amplifiers(?).
The question is whether it is possible to apply some more modern ways of thinking for valves - as well as for transistors?
One might also ask "is the INTERCEPT POINT MEASUREMENT" a sufficient way to measure a receiver VALUE in respect to surrounding signals?
I believe it is not. DL1BU (being famous for measuring receivers - mentioned in Ham Radio) wrote in at letter some years ago:
Quote: "Drake R-4C measures bad, but operates well" UNQUOTE
I think the best way to measure a receiver is by using the NPR method (we used it for analogue radio links up to 2700 channel systems).
You generate a white noise spectrum, but have a notch of defined bandwidth
You measure how much noise comes into this slot, it will define the inter-
moudulation. This is dependent on several factors, and for a receiver the actual front-end selectivity will bonus a valve receiver which might not measure so good in respect to IP.
I have been looking for design and surplus filters during the last 20 years, but I am unable to find good filters. The only notch filter inside amateur radio bands for telephone circuits is 3886kHz, but it is almost 600kHz wide. Some xtal filters should be available but I have not seen any.
Building a receiver one should bear in mind to look for what is optimum and if, say 20dBm will be satisfactorily with good front end selectivity a 6DA6 RF amplifier and 4x1N4148 (possibly 8x1N4148) mixer may be satisfactorily, of course - with gain equalization - so one does not use more gain dependent of frequency than necessary.
According to SM0HP, Shortwave radio designer in Stockholm Sweden, one of my boatanchors, the German submarin receiver T9K39 "Main" was almost impossible to overload, it has 3 RF amplifiers - with low gain, but high selectivity, and it was designed in 1939.
Intercept point measurements with this RX just did not make sense.

Hello!

Well, title says _almost_ all: unit doesn't need to be perfect; I want only a complete receiver, although not working (summer project :-) ?). Cosmetics can be from about a 6. Filters are of course a plus. Same for manuals. BTW I want the receiver for use it in my shack and also enjoying its restoration.

Please, e-mail offers directly with price, condition and filters supplied.

Any other further information welcomed!.

Thanks and best regards.

it seems often impossible to send replies via email, hope nobody
complains about further info on this newsgroup....
--
Radio Communication May 97, page 70. Technical topics (G3VA).
G8MOB writes:
....R-4C. I find the tuning lumpy and too fast at 15kHz per
revolution of the tuning knob. The collins R390A is a superb
example of mechanical engineering but is dreadful to tune
and many professional engineers consider its AGC poor, indeed
that Collins never got its AGC right in any of their receivers,
whatever their merits elsewhere......

Indeed I agree, but I feel this is like swearing in the church!
But a mofification for old rigs should be carried out in such a
way that it is still possible to bring the boatanchor back to the
original state, if/when this this may be necessary.

Collins 51-S AGC type is in many respects like the one found in
the Telefunken Kw.E.a. (shortwave.receiver.a). Either has a
has a separate non-agc valve for agc IF amplifier, but the near
60 years old German receivers applies different time constant for
CW and AM. (I wonder if BC348 does as well). AM needs rather short
time constant, CW much more, and ssb a lot more - but it must not
be increased in such a way that attack time is too long.
R.L.Drake has shown good AGC engineering with the 2-B. Here is
also a separate, but simple IF amplifier (6BF6 triode). 2-C has
a transistor detector to avoid this extra IF gain, about 5V pp is
a good nominal IF voltage to feed the transistor - when applying
this technique for the 2-B (I looked at R-4B circuit).
It is two ways to distribute agc time constants, referred to:
1) Drake 2-C, 4, 4-A, 4-B, 4-C etc
2) Drake TR-4, TR-4C
the latter is difficult to apply in other transceivers, I am not sure
if it is easy to apply for AM. I used a mixture of 1 and 2 for the
Trio/Kenwood TR-7010 with some success.

Collins 51-S (I have no circuits for 75-series and 51-J):
The modification was done in 1989, and the receiver was given to
LA9IC Eivind (who lives 800km away), so I cannot find all details
too easily.
One need a switch to select between AM-CW-SSB. Remove the old
connections for selecting and use an extra relay to switch BFO
in/out and switch between the two different detector outputs.

The switch is now used to switch the relay and select time
constants for AM/SSB/CW. I used a small 100V relay with series
resistor and 0,1uF in series with 2000 ohm resistor - connected
in paralell with the relay coil to suppress the arching.

proposed time constants:
C192.
ssb: 0�47 with 22k in series
cw: 0u22 with 22k in series
am: 0u1 with 47k in series

Source: Amat�r Radio (NRRL) nr 4-90 page 101-102
I wrote an article for the swedish magazine QTC, but I cannot find
any of the notes today.
More details were shown in the latter article.

The isolation resistor was usually 1 megohm on an 11megohm/volt VTVM. Some Eico
VTVM's were 25 megohm/volt but, I don't think those models used the uniprobe.

3942. Homebrew Boatanchors

Newsgroup: rec.radio.amateur.boatanchors

Source record: 120230

With all the recent interest in vintage radio equipment, I think many of us are not even giving a second look at some of the most interesting classic gear of all time. I'm refering to well built, homebrew transmitters and receivers. At a recent hamfest I spotted a very well constructed amplifier, built around a pair of 4-125A's. Underneath forty years of dust and grim was a charming looking, conservatively built amplifier. Some restoration effort is required, but this unit will be the heart of a high power A.M. rig that I'm trying to build.

The design is straight out of the 1955 Radio Amateur's Handbook. Such rigs are one of a kind treasures, that celebrate the tradition of homebrewing. If you can't find or afford a Globe King or Johnson 500, this may be a good way to go. I certainly can't complain about the price.

The seller's asked for and received $25!! He was happy and I was ecstatic.

I'm not a ham but have converted Comamnd Sets.
I think there are many roadblocks to the full appreciation of
Command sets as converted:

The typical command set receiver needed a considerable
amount of hacking. The dynamotor had to go, the filaments had to be
rewired for 12V, the connectors were probably unavailable, so
they were bypassed. The power supply maybe wouldnt fit on the back
porch, so it had to be cobbled on. The front panel may have to be
drilled to add a volume control and maybe an earphone jack. The
tuning spline shaft had to have a knob cobbled on somehow. The antenna
input often was changed to a more standard connector too.

Yes, this was a valid conversion of the radios at that time.
From today's perspective it makes some of us us cringe a bit.
It was all rather drastic but necessary. Much like with the
almost extermination of the Bison, everyone thought there was
an endless supply of these things, so they could be used as
needed without regard to conservation.

It's like doing a history of the old West. There was a lot
of honor and glory, but also a lot of carnage.

For my 3 Command set receivers, I'll probably leave them as
I converted them 25 years ago-- They're a snapshot of a place
in time when it was okay to hack up these old boxes (with
all due respect), as needed to put them to use.

If the local B-17 restorers needed Command Sets, some less hacked
up units would probably be more appropriate.

I've got an odd problem with this radio. I can tune 80, 20 & 15 meters up to an output of 175 watts (into a dummy load) USB/LSB. However, on 40 meters, I can only tune a maximum of 100 watts. The (built-in current) meter will show the PA current as normal (350MA) except on 40 meters, which will have a max of 175MA. All tubes check out ok and it operates normally otherwise. Any suggestions as to what the problem might be?

I have another Tempo One and it functions normally on all bands. It differs from the one in question in that it has a cooling fan for the finals.

Thanks for any help you can give!

John B. Lawrence

Improve Collins 51S Receiver

In 1969-73 I worked at Rogaland Radio (LGB) and found the
opportunity to test the Collins 51S and 51J being used in large
extent; 51-J4 for CW and 51-S for SSB/AM. I did not find
the 51-S to sound much good on SSB. I had my own
Drake 2-B, and SSB performance for the 2-B is superior to an
unmodified 51-S receiver. A friend gave me some 51-S's for my
experiments, and I felt free to find a solution about how to
make them really sounding like Collins gear should. 4X1AD
requested that I published the modification.

Last I.F. amplifier.
IF signal to feed the AGC detector is taken from output at the
third EF93/6BA6, while there is still AGC fed to the fourth
EF93. This does not make sense at all. The connection to AGC
circuit was somewhat strange, and the RX mute-circuit will
feed positiv voltage to the agc line during 'transmit'. So I
decided to remove agc from this stage (better to make a good
agc so no agc is needed at this stage). R43=3M9 is removed,
and R109=1M2 is left connected between (V8) grid and ground.
Connect a new cathode resistor (without bypass capacitor),
between V8 pin 7 and gnd.
The signal gain is still quite sufficient.

In 1975 I made a rather simple, but extremely good improvement
for AGC in the Trio (Kenwood) TS-500, adding a series resistor
to the 'l�arge' time constant capacitor. The transceiver was
improved very much - with addition of only one component.

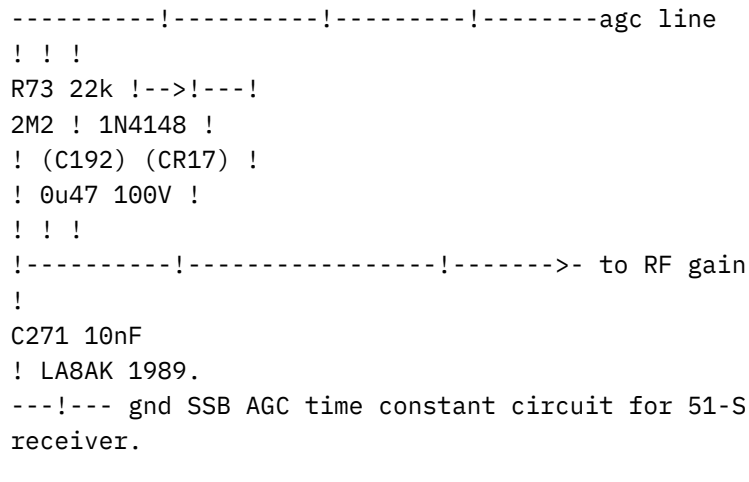
Collins 51S: Remove R73, R125, C176, C192, CR17. New component
values for
R73=2M2, C192=0u47 with 22k in series.

Quality for SSB is now extremely good. I have never ever used
any receiver with better quality on ssb!

The reason for 'poor' AGC.
When the receiver was constructed, there were not many ssb
coast- or ship- transmitters, and the agc was made as a
compromise between am and ssb-reception. SSB requires long
timeconstant, while AM requires a short -.
CW requires somewhat less timeconstant than ssb. But this
receiver is made mainly for AM/SSB operation, with some CW

facilities for smaller stations.

Problem:
While the sound is now solved and very good for CW and SSB, a problem is created for AM. One feels 'vacuum' in the ear when listening on shortwave to a broadcast station, so some further changes are recommended, but this is for next bulletin on this matter.



receiver.

Further notes on receivers:
G3VA Technical topics, Radcom May 1997, page 70-72, particularly interesting is the note from G8MOB - on Drake R-4C and Collins receivers.

Does the rig have separate tuned circuits in the mixer and driver stages
for each band? If so, I'd suspect a failure somewhere in one of the 40m
tuned circuits which may be limiting the drive on that band.

I saw a picture of this one in the Osterman "Shortwave Receivers Past And Present" book, but have never seen one in person, or for sale anywhere for that matter. Probably produced and sold in the early 1970s sometime. Anyone out there own this one and have any comments on it...?

isn't it similar to FT-200 FT-250 etc ?
I had an early FT-250 in 69. The fault John mentions occurred on 80m -
believe a 330uuF capacitor changed value in 80m driver or pre-driver
circuit, it was also a crystal problem on ssb (80m cw), believe one
ceramic value capacitor changed value in the carrier oscillator. I
cannot remember particular problems for 40m, but it is 27 years since I
had this rig... The AGC circuit looks like a copy of the Drake TR4.
DF7JE modified it similar to this, but I felt that it was not much
success in changing time constants in this order...

What's wrong with the old one...? Have you tried cleaning/lubricating the resistive track? Usually they're just dirty and can be cleaned with a spritz or two of aerosol cleaner/lube.

If it does need replacing, you ought to be able to get just about any old standard 1/4" shaft unit in there. Typically the chassis is punched for that, and perhaps also the smaller hole for that flat tab to keep the control from rotating loose. Probably the toughest job will be machining the shaft to match the original length and provisions for the knob, but usually that's just a hacksaw/file job.

There used to be a couple of "pick-a-shaft" parts lines (i.e. TRW, Centralab), where you could buy the separate components to build a custom unit to match the original (specify length and shape of shaft, resistance, linear or audio taper, AC switch on the back, and so on). The parts just snapped together. Mabye Antique Electronic Supply in Tempe, AZ still has some of those around.

I'd try seeing if you could clean it first (I am assuming that the trouble with it is scratchy noise when adjusted)... the radio would remain all original that way.

GE did this way back in the early 60s. They called the units TIMs, Thermally Integrated Modules. Tiny tiny vacuum tubes combined in a single package to form the equivalent of a SSI IC. The intended market was space applications and highly radioactive environments where solid state couldn't survive. But solid state development so outstripped TIMs that they quickly disappeared.

I am getting ready to sell my collection of TMC equipment. I would
llike to sell the entire package all together if possible. I have
the following TMC gear for sale:

#1- TMC Variable Freq Osc Model VOX
#2 TMC Oscillator, Radio Freq # O-672A/URA-28
#3 TMC Transmitting Mode Selector---Exciter Unit
#4 TMC Test Generator---Model TTG
#5 TMC- Oscillator, Radio Freq Model O-330B/FR
#6 TMC Sideband Monitor Model TLM
#7 TMC Keyer Model KY-429/FRT
#8 TMC Power supply Model PP-1769/URA-23
#9 TMC Power Supply Model A-1397
#10 TMC Spectum Analyzer Group AN/URM-116A Two pieces
in the spectrum analzyer group
#11 TMC GPR-90 receiver no cabinet top
#12 TMC GPR-90 receiver parts radio

TMC equipment was used as a "fool proof" communications system with
the old DEW (Distant Early Warning Stations) that were along the Artic
Circle.

TMC is probably the only communiations equipoment manufacturer that
enjoyed a reputation for quality equal or even surpassing Collins.

I will sell this entire group of equipment as a package for $1600.

Chris,

Used to have a DX-120 in the early 70's for my novice ham station and general SWLing. Recently re-acquired one. It's a nice general-purpose receiver for casual listening. Good sensitivity up thru the 15 MHz SWBC band, then seems to fall off. (Or is it just because of poor propagation these days?) It has the typically poor image response of single-conversion receivers. But for casual listening it's not really a problem. Built-in speaker has pretty good fidelity.

hi
below is shown a list of AGC controlled pentodes and some other valves,
if you know some types which should have been in this list please tell
me
please include forward conductance, anode current and screen current,
and
if possible: agc performance data
73 de jan-martin

3985. Heathkit LMO Fixed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-09 00:00:00 UTC
From: timcook@erinet.com
Message-ID: <3373a32f.14140331@news.erinet.com>
Source record: 120181

Thanks to all for the info on how to repair the intermittent in the
LMO of my recently acquired SB-313. As it turns out the main problem
was that one of the soldered-on finger stock inside the LMO case had
come off and was "floating" around inside the LMO!! I repaired that
problem, lubed the cap shaft and put it together. It works great now!!
Sure sounds good with the SB-600 speaker. Thanks again
Tim
NZ8J

3987. FS Sam's Photofacts Collection

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-09 00:00:00 UTC
From: John
Message-ID: <5l06tq$o7j@drn.zippo.com>
Source record: 120183

I have for sale approximately 100 old Sam's Photofacts, from about number 170
up to about 1300 (obviously not complete set!)
A complete listing can be made available to those interested.

Please email inquiries/offers to;

aa6q@pacbell.net

Thanks

John, N6AX

Just how much is a T-368 transmitter worth if it
is in decent condition? I would like to know the
low and high end prices...

Thanks,
Walter - KT4JA

3991. Re: Tubes vs. Transistors: Better Performance in Rcvrs??

I have been reading this thread for awhile. Both you guy's make good points on the theoritical aspects... but I am a more pratical kind of guy... I am more concerned about a darker issue I see in new solid state designs.

The good ol days when a 555, 751 or a 723 was a 555, 751 or 723 are long gone. Used to be you could buy the same solid state device from any number of vendors. 74/54 TTL and CMOS logic was also standardized thanks to NASA and the military.

Today the latest rage are PALs (Programmable Array Logic) and their programmable brothers. Now a computer can "program" a standard chip to behave like a large number of chips saving both money and Circuit Board real estate.

Problem with that is now you have given the vendor the power to determine WHEN your radio WILL BE REPAIRED and how long YOU WILL KEEP IT.

How can they do that you ask?

Simple - every radio now contains mutiple CPUs. It would be a simple matter for the software to access a RTC (real time clock) and send a command to erase or even re-program the chips to deliberately fail. It would be a simple matter to do this in a way in which it would be impossible to prove.

But let's say you keep your radio in the closet and never use it. You decide 5 years later you might want some spare parts to have on hand in case of emergency. Sorry buddy, a vendor who could make say $60 by programming a chip will simply say "sorry, parts are unavailable... enjoy your purchase of our new $2,700 radio" .

Now can buy that PAL chip anywhere but only THEY have the software...

This has some interesting implications... for example:

The FCC could mandate all radios have a shut down function so that only they could turn off radios owned by troublemakers.

Brand-X could come up with a radio that they will "Give" away to any ham. Simply charge $125 a month and they will give you the code to punch in... kind of a "pay per transmit" type deal.

Now going "Back to the Future"...

Tube equipment on the other hand is simple. Parts are plentiful and mostly interchangeable. A 12AX7A is a 12AX7A on any part of the planet.

You may say that tube technology is "frozen" and I would agree. But I would also say that's tube technology's greatest strength. It's well documented and understood.

Solid state used to be the same way in the 70's and 80's. But in the 90's, I am afraid everything is done in software and this is concentrating the knowledge base (and the power) in the hands of a few.

Fellows, I hate to sound like a conspiracy nut but when it comes to the old wallet, I gotta tell's it like it is...

It's tubes for this ham....

WALTER! I have had 3ea. T-368's and 1 spare parts radio. I paid $600. for the 1st one about 7 years ago and another 5 years ago for $900., and a new one in the wooden crate about the same time $1200. I traded one, (a used one this year) for a broadcast staion radio that is worth at least $2000. For the ones that I have seen, they go all over the place. I have my (parts only) radio for sale at $400. Hope this helps some, Regards, ARTHUR KC6KUK . . .

3993. FS: Johnson Viking Navigator Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-10 00:00:00 UTC
From: larryj@kelly.teleport.com
Message-ID: <5l2nqu$dq1$1@kelly.teleport.com>
Source record: 120102

FS: Johnson Viking Navigator Transmitter. Rare unit - transmitter/exciter CW only for 160 through 10-Meter bands (no WARC, but does have 11-Meter band which could probably me changed to 17-Meters.) HAs all original knobs, but I don't think the meter is original - it has the EF Johnson logo on it, and is the same size with the rounded corners like the other Navigator that I have, but the markings are different. I believe the case has been repainted with original - looking maroon paint (it looks too good - no scratches.) There appear to be a couple of small dents in the top of the case which weren't completely pounded out before the case was painted, but you have to look for them. The front panel looks pretty good except that there is a small hole (about 1/16" diameter) drilled thru just above the meter (don't know why.)

This is certainly the best looking Navigator I've seen out of about a half-dozen over the last few years (except for the one that I'm keeping for myself.) I can include a photocopy of the manual (that's all I got too, was a copy.) $325 plus UPS shipping.

Hi
Perhaps we have put it wrong...
The question might be better to ask: How good is an old receiver design compared to a new solidstate receiver? Is some of the tube receivers still satisfactory, and in case it is not, what could be done to modify it for resonable quality?

Another question might be: Why is it that the communication receivers in late 50's have substantially better sensistivity than 10 years earlier, - at least some receivers from 1939 had quite adequate sensitivity

I had one in WW-II in my bedroom, Philmore crystal holder with an
EVEREADY battery cover for a coil form, a long wire and sometimes
instead of earphones, I connected it to a 5" PM speaker and being only
3 miles from 50,000 watt KFI, my mother would wake me up to turn it off,
she heard it 2 rooms away in the dead of the night. If you go to a rock
shop, you can get a small piece of gelena crystal and use it stuck in
the holder or melt solder in a hole drilled in a piece of wood the size
of the crystal holder. Be sure to clean the flux off of the crystal.

Have fun! Best Regards, ARTHUR KC6KUK . . .

3996. TRADE: Knight T-60

Newsgroup: rec.radio.amateur.boatanchors

Source record: 120105

For trade: Knight T-60 transmitter,
all original knobs, reprint of manual.
Cosmetically about an 8. Nice panel,
the "usual" scuff marks, normal wear
& tear on cabinet. Works well on
80-10 meters, squirrelly on 6. (I've never
seen one that din't work wierd on 6!)

Would like to trade for a Johnson "Adventurer"
or "Challenger" in the same condition.

73,

Sandy W5TVW ebjr@worldnet.att.net

Today, I bought a used oscilloscope at a flea market. It is a BK
Precision Model 1479, 30MHz scope.

I need a manual for this scope. Does anyone have a manual which they
would be willing to copy for me? Of course, I would reimburse expenses.

Thanks for reading this. Drop me a note if you can help.

The reason you have received no bids might be cause you're charging a shipping
and _handling_ charge rather than actual shipping costs. YMMV, but I refuse to
buy from, and am suspicious of folks who want to charge me _more_ than
the actual cost to ship.

Sort of appropriate to the BA newsgroup...Just got off 20 meters after an excellent BA QSO with WB6WUH and want to email him to tell him how to reach other BA sites, lists, etc. He isn't into computers very much, and has never used email but is a Compuserve subcriber with an address at compuserve of 102435,645 He says that he gets advertising email sent to him sometimes.
I have tried to send email to the various combinations that I can think of, but have had no luck with getting it onto the net for delivery past my ISP. Can someone with experience tell me how I would address mail to the compuserve user address of 102535,645 (that is how he confirmed it during the readback) All the best to you all. 73 de

Source record: 120114

You make a good point. I was thinking about this just the other day,
when I saw a post from someone looking for 1930's vintage "boatanchors".
I wish I could remember the subject header. He mentioned having acquired
a commercial receiver of the era, and wanted a tranmsitter to go with it.
I think he mentioned a National transmitter.

I didn't reply, but my thought was that I thought commercial transmitters
for the ham bands were still uncommon at that time. Commercial receivers
were common or becoming common (at least according to the history books),
but transmitters were still something to be built. I think it didn't hurt
that the transmitters of the day were relatively simple.

So in a sense, if someone was trying to recreate a station from the
1930's, a homebrew transmitter would be the rule, with commercially built
transmitters the exception.

Bill Orr did a few articles in the early seventies about homebrew
equipment from around the 1930's. If you scrounged up old parts from the
era to build something just like it was done back then, is it a
restoration, a copy or an original?

At the very first ham auction I attended, a month or two before I got my
license (back in 1972), I picked up a homebrew transmitter for a very
small amount. I took it apart for the parts; I still have some of them
around here and there. To me, it looked old (I was twelve), and thinking
about it now I don't think it was all that well built. I have this
picture of bad wire and bad solder joints in my mind right now.

A year or so later, I came across a picture in a back issue of 73 for
a transmitter that looked very much like that thing I took apart. By
then, I couldn't check the transmitter I bought to see if it had been
built from the article, but I like to think that it had been.

I am interested in selling the following package. I would prefer a pickup or could meet someone within a reasonable distance. These units are sold as is. The Viking II's are complete but not working. The HQ-129X is working, but does not have the original knobs (It has the Collins 75A series knobs), and the front panel is worn. The VF-122 and the matchbox look pretty good. I have a copy of the manual for the Viking II, VF-122, and matchbox. Would be interested in a trade for something of interest. 73, George.

2- Viking II's with 2- VF-122 VFO's
1- 275 watt matchbox (without coupler)
1- Hammarlund HQ-129X rcvr.

All of the above for $450. I do not want to split up at this time.

I have a very interesting and rare Wanzer Z4 Z-match antennae tuner. This tuner is switchable for either pi or T tuner configuration. It has a very nice roller inductor and has a switch for long wire antennaes. It is designed for 1.8 thru 30 mhz use. Will sell for $85 plus shipping. 73, George.

4014. Yasue BA literature

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-10 00:00:00 UTC
From: hudog@ibm.net
Message-ID: <33749FA5.127B@ibm.net>

I have some original literature for a Yasue boatanchor. I believe since it has tube finals and is over 20 years, it should qualify as a BA..

I have the following:

FTdx560 color brochure
FV400S VFO
FT-2F
FRdx400/FRdx560 rcvr/xmtr
FTV-560 50mhz transverter

I will ship this literature continental US for $5. 73, George.

I have Terman's 'Radio Engineer's Handbook' from 1943. This is a book over 1000 pages long, and is a classic reference for vacuum tube design, receivers, transmitters, and antennaes from that era. There are some slight water stains on the inside, but the pages are not stuck and are very readable. The binding on the original cover is still in fairly good condition. I'd like to sell for $17 plus shipping. 73, George.

Hardly true in practice. Listen to a NC300 through its factory
supplied speaker while tuned to an AM transmission. Listen with a Sand
State transceiver with its factory speaker. There is no comparison in
fidelity and ease of listening. The '300 or any equivalent of its
time, with a wider audio passband and heftier output stage is much
easier on the ears. Is it possible to duplicate such sound with Sand
State...yes... is it often done in practice in commercial ham gear?
Rarely...

What a deal. I was working away yesterday at the urging of my wife, when I found the box I'd been missing for a long time. There were these books in it:

1. CQ Technical Series "Command Sets" (1957)
2. Surplus Radio Conversion Manual, Volume 1 (1948, Second Edition)
3. Surplus Radio Conversion Manual, Volume 2 (1948)
4. Surplus Radio Conversion Manual, Volume III (1960)
5. CQ Technical Series "Surplus Schematics Handbook" (1960)

I'm very elated at the find. Don't want to sell them, but am puzzled as to how to share them with others that like to mess with surplus radios. How ethical or legal is it to scan in pages and send to a requestor? These are up to 49 years old.

Thanks for replies,
K5FNI

From: lsmith <ckvnfm@mb.sympatico.ca>
Message-ID: <33755BA6.7F39@mb.sympatico.ca>
Source record: 120120

Hello Jan-Martin and other on the group:

This is an interesting thread deserving of more comment than I've seen lately. It is a topic that is frequently "thrown in our face" by some of the younger, less experienced hams who have never actually operated a good BA (but conceptually are of the opinion that tubes are just junky curiosities), or from older hams who have been into the sandstate stuff for a longwhile, and may have had lower quality radios when they did own a radio which would now be considered to be a BA.

The opinions expressed here are opinion only, and are based on my personal observation, and a great deal of personal subjectivity, not scientific lab test results, so take it easy flamers...I have a right to express my opinion too!

About 10 years ago, I sold a desk full of tube gear, Yaesu's, Nationals, Heathkits, etc. because I had finally got a good job and was going to treat myself to an excellent state of the art solid-state radio, and get rid of the "old junker tube gear."

I came close...I bought a hybrid, the Kenwood TS-830 (uses 12BY7 and 2 6146's in the final). This is an excellent radio and came with extra IF filters and I enjoyed it very much...still have it today, but might sell it tomorrow. It has one of the best receivers that Kenwood ever produced and still holds its own against any of the "garden variety" radios sold today.

I became interested in tube gear again about 3 years ago, and aquired one for the novelty and nostalgia value. Frankly, it put the fun back into ham radio for me again! I then got a National NCX-5 to match the NCL-2000 Amplifier that I had been driving with the Kenwood. After that it was time to dive off the deep end....I went for Collins, something that I could not have dreamed possible... when I was growing up and spending my paper route money to buy a $25 receiver, it was like buying a new car. My first Collins was an older KWM-2 transceiver. The ownership of some of these old radios is like being trusted with a working museum exhibit.

Just to make sure that I had not been bilked, or gone off on a BA tangent that would have people thinking that I would be collecting odd bits of tinfoil and string next, when I bought it, I set up a "test rig" in the shack. This "sophisticated test rig" was a T connector in the coax and a switch to the speaker so I could select between the output of either radio. I must say that after about a week of listening with this setup (no I didn't transmit into the recever input), I never heard a signal on the Kenwood that I could'nt hear equally well on the Collins

as far as signal strength was concerned, and the only place the Kenwood had a very, very, slight advantage was in bad QRM like a contest, where the '830 was a little more selective.

Where the most dramatic difference came in between the two was in the audio quality. The Collins was head and shoulders above the Kenwood and was just a far more pleasant radio to listen to for an extended period of time. That made a believer out of me, and I have not regretted the decision since.

Many Old Timers used to tell me that the receivers made at the end of the vacuum tube era (mid to late 60's) were the finest examples of ham radio engineering ever made. I used to wonder what they were talking about, since the best radios I had ever owned which had tubes were the Heath HW-100 and the Yaesu FTDX-401, and I thought the Kenwood just blew them out of the water. Now, when I listen to my Racal RA-17 on the broadcast band late at night, or the Collins S-Line when I'm on the air, it just sounds so much more pleasant to me, and I don't develop the listening fatigue that I used to. Also, there is just something about the way CW sounds from a pre WW2 National HRO that can't be beat.

Now that I operate the Collins almost all the time, I like to play a little game with other operators, wondering how long it will be before they comment on my audio being so great. Usually it only takes about 3 transmissions before they take the time to pay me a compliment on how good it sounds. Also, I can load it to an antenna that is something other than 50 ohms and still develop a bag of power.

This is not to say that for the serious DX'er or contest operator, that these radios will be suitable. If you are just one country away from "working them all" and you just MUST make contact with the only operator in Upper Volta during a contest held in the low part of the solar cycle, maybe a $5000 state of the art tranceiver with stacked monobanders at 200 feet is the way to go! For the average ham operator that just wants to put out some good sounding RF and make contact with anybody that he can hear, the tube gear will do a very good job for him, and is very cost efficient.

In my opinion, tube gear represents a great value for the operator who can't really afford to go to HF from VHF. I hear regularly from new hams on 2 meters that "I'd like to go HF, but can't afford the cost of the rigs." These radios can be found through reliable older hams for as little as a hundred dollars. Of course you can...and likely should, pay more for one. Fleamarket purchases from an unknown dealer with an unknown background can be somewhat of a crap shoot though, and you are justified in being wary if you don't possess the skill and equipment to tackle troubleshooting and repair. There are still millions of tubes out there, so don't let that bother you. I'll bet that in 20 years I am still able to locate a 6BA6 or 6146, but will the sandstate guys be able to find a replacement chip? Frequently the thing uppermost in the mind of an OT is finding a good home for some of his equipment where it will continue to provide as much enjoyment to someone else as it did for him,

and to help out a new ham (yes, there still are guys like that out there).

Another aspect that I like about the tube radios is the quality of workmanship in the better manufacturers like Collins, Drake, etc. The soldering is beautifully done, RF design was still a section of engineering which was a viable area for a bright Electronics Engineer to get into, and when...not if, you have to do some work to your radio (even new radios fail), you can actually do it yourself! You must of course be wary of the high voltages involved compared to solid state. Make no mistake, these snakes can have a nasty bite!

There is an excellent two part article in Electric Radio Magazine about the topic of modern radios versus older radios in the November and December 1996 issues. The technical issues are discussed in well researched detail, and I encourage you to read it. You'll find that in many ways, the older stuff indeed outperforms many of todays radios which are sold.

I had not intended to make this so long, and although I'm just getting started on many of the aspects as to why I prefer to spend my money on high quality older radio equipment rather than low quality new equipment, I'll spare you any more! I hope that I have encouraged a few people to join the ranks of the "Boatanchor Owners."

All the best to all of you, and I look forward to seeing your post here as to why you prefer BA stuff, and how you find the performance and enjoyment level per dollar spent. I hope to meet you on 20 meters someday. 73 de

Tubes were pretty much at the peak of their develpoment in the late 50's to mid sixties, and filter design was becoming better understood and manufacturing of the filters allowed the costs to be reduced on a per unit basis. Some of the Phillips receivers from that period were the finest made in the world. A friend here in Winnipeg is Dutch, and has a

marine receiver made by Phillips for use onboard ship. He was a ship's radio officer for many years. When I listen to that radio, it is a delightful performer, and is far more quiet than many of todays radios. Hope this helps!

From: Geoffrey Schecht <geoffs@onr.com>
Message-ID: <01bc5dd0$1b7eb240$235a01c7@portabox>
Source record: 120122

Wow! I'd forgotten about that thing...I had an APR-4 around 1970 or so when I was in high school. I don't remember the plug-ins that I had but I recall one having a 2C43 tube in it and perhaps I had another with one of those oddball WE "doorknob" tubes in it for even higher freqs. I do remember that the front-ends on the higher frequency units were practically deaf owing to their lack of conversion gain and their noisy LO's. I think that the APR-4 was primarily used to find out what frequencies that the enemy radars were operating on so they didn't need much in the way of sensitivity.

I used it to listen in on 1.2gHz back then but all I heard were harmonics or images from UHF TV (little else was on UHF at that time as far as police or public service was concerned). One of my plug-ins was intermittent. I seem to remember something about the plug-in(s) using the lighthouse tubes were prone to having the insulation fail (probably teflon, which was in limited use during WWII).

I got rid of all that stuff around 1974 when I went into the Navy. I wish that I would have kept some of it now. I had brand-new RBC's, ARC-5's, a BC-348 or two and an APX-somethingoranother (an IFF set, I think it was an APX-25 but I can't remember). You could pick those things up at a place called Zidell's in Portland, Oregon in the late 60's and early 70's for pennies a pound.

I believe that those things had built-in 110V, 60Hz supplies or maybe I powered mine from an old Lambda HV supply. A lot of the newer (like 40 years old or less) aircraft stuff runs off of the accursed 115V, 400Hz and it's hardly worth converting over to 60Hz use. The 28VDC-in stuff with the dynamotors is especially entertaining, especially when a rotor siezes and the windings go up in smoke.

I still have some of the tubes that go into the LO's of the APR-4 and other WWII ELINT and EW systems but I'm fresh out of the units themselves. Where'd you find that thing, anyway?

4039. Re: Panel Engraving

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-11 00:00:00 UTC
From: Geoffrey Schecht <geoffs@onr.com>
Message-ID: <01bc5dd3$65b6e960$235a01c7@portabox>
Source record: 120123
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Save your money; photoengraving is a lot simpler. You'll go broke stocking all of the bits that one of those CNC engravers uses and the hold-down jigs required for the various panels you'll be doing is gonna run into a lot of money, too.

If you have a PWB layout package that can produce Gerber plots (there are some public-domain or shareware ones out there that'll work) , you can create the panel on your computer and then photoetch the panel yourself (acid or NaOH for aluminum) or have it done at a plating shop. It's possible to use regular CAD software like QuickCAD, AutoCAD or CADKey to do the artwork and have it plotted and shot photographically at a blueprint house if they don't have something like HPGL-to-Gerber converters on hand.

You can also cut a Rubylith photomask if you're really desperate for something to do; that's how they did it in the sliderule days and the front panels on the old Tek 500-series scopes do look pretty good. Any blueprint shop can shoot the ruby onto orthographic line-art film for about $30; then you're in business.

Either way, you wind up with a photomask that's good for a zillion panels if you take care of it when you're using it.

Nearly all of the WWII and later era panels that have sunken/raised lettering were done with a photoetching process. The neat thing about the sunken letters is that you can fill them with paint for a really professional look.

You can buy a can of photoresist spray-on at an electronics supply house (positive or negative working, take your pick). I think that GC Electronics sells it in kit form. Kodak and Shipley (if Shipley's still in business) sell it in larger quantities but it doesn't keep well and the last time I checked; you couldn't buy less than a gallon at a time. It can be exposed under a shortwave UV lamp and I think that Kodak KPR is exposable under sunlight.

Trust me, a can of photoresist weighs a >lot< less than that CNC mill, requires no CAM programming and your artwork is limited only by the capability of your CAD package.

For sale on behalf of the family of a local silent key :-

1. Collins KWM2 HF TCVR
2. Collins 312-B5 VFO
3. Collins 301-L linear Amp
4. Separate Power Supply
5. Sure Mic
6. All interconnecting Cables
7. Lots of Spare Valves
8. Manuals Documentation.
9. Heathkit Monitor Scope HO.10

All the above in Very Good Working Order. One owner since new. Will not split. Offers in the order of UKP 1100.

10. Yaesu FT101B with spare valves UKP 250

11. Hygain TH6DX Antenna + Cables UKP 350

12. 60Ft tower with post and electric winch. Excellent condition. UKP 350

13. CDE Ham-M Rotator and Controller with all cables UKP 85

Items 11-13 UKP 550 as one lot. Will need help dismantling.

14. IC208E 2m 10W FM Tcvr, Mag Mt Ant, 3 Amp PSU and cables UKP 125.

15. Hansen SWR-3 Meter UKP 25

16. Eagle RF40 RF Fsm UKP 10

Equipment is near Trowbridge, Wiltshire UK. Please reply by E Mail with contact phone no or address and I'll pass the details on to the guy handling the sale.

Source record: 120126

Hi all,
I have a friend has a Tempo 2020 HF SSB xcvr for sale. I told him that
I was interested in it and he asked me to make an offer.

The cosmetic condx is fair to good. Some minor scratches on the case.
The VFO knob suffers from a bit of backlash but not too bad and most
of the pots are crackly.

Can anyone suggest a fair price range for this rig?

Please reply to me either here in this NG or email at the below
address.

Much thanks in advance...

I would not advise using regualr 60/40 solder for galena. The
temperature is hot enough to damage the crystal sensitivity. Most
crystals were mounted in what is called Wood's metal which has a very
low melting point. By the way, I mailed him a couple of mounted
crystals.

I'm looking for the John Rider's course on Basic Radio. This was a series of books- I believe around 6 of them which covered fundamentals.

I have an extra set of Rider's Basic Electronics, which is a great series on vacuum tube technology and basics of RF design- receivers, transmitters, antennas, etc. I would trade this complete extra set for a set of Basic Radio.

If anyone knows where these books are, I'd appreciate any leads. Thanks and 73, George.

Source record: 120129

Yes, I had a few myself. My brother and I donated three APR-4 and one APR-1 with a total of twelve tuning heads to the Historical Electronics Museum near the Baltimore Wsahington Airport. We had tuning heads from 30 MHz up to 4 GHz. Also had the ALR head which was four combined into one to cover 30-1000 MHz and used 7 pin miniature tubes (6AK5, etc.)
The APR-4 itself ran off 115V 47-2600Hz (yeh, 2600Hz upper limit) and required 24V for the motorized tuning heads.
Speaking of EW, also sent the museum a APT-1 jammer and parts of an APR-25 system.
I keep thinking I would like to have another APR-4 or APR-1 and set of heads, but then I lie down until the feeling passes.

Remember the old yellow Gibson Girl AN/CRT 3 hand cranked distress xmtr? It sent a CW SOS on 500 kc and one other distress freq around 8 mc. One seller had several beat up ones including the antenna hoisting gear (box kite, hydrogen generators, balloons). What was surprising was that he had one BRAND NEW, still in the original mfrs cardboard box, sealed up. He wanted $500 and explained to me that he could get about that much from someone who was restoring a warbird aircraft. Maybe he can.... Once in awhile you see an unusual NEW boat anchor besides the numerous ARC 5 type xmtrs.

Some writers mentioned problems with unlinear RF amplifier with SB300 series receivers. The tube is runned with very low grid bias, and grid current seems to add some grid voltage. Solution is to increase screen voltage to 90-110V, and increase cathode resistor accordingly for same anode current. This problem does not exist with HW-100/SB-100 series

Bought a Gibson girl for 5 bux back in the early 1950s
when in grammer school. Drove the local Coast Guard nuts with
it for a couple of years. (did not know it at the time). If you
transmitted near an AM radio you could pick up the MCW either on
an image or perhaps it was overload. In any case, with a block long
long wire strung down our alleyway, you could hear the damn thing
clear across town (Eurek California not being a very big town).
Fortunately our attempts to convert the thing to an AC power supply
killed the thing and damn near killed Clyde, one of the kids who
used to be brow beaten into cranking duty. Oh the good old days.
Me thinks that 500 bux is a bit steep even for a new one. Just
makes the case for us hams being deprived of our nostalgia toys to
supply the non ham oriented collector crazzzze. Tsk Tsk. Tis life
I guess hi

73

From: Peter Parker <parkerp@pcug.org.au>
Message-ID: <33763135.0@cheese.pcug.org.au>
Source record: 120140

I wonder if anyone can help with info on a Galaxy V rig. I have one here without a power supply. I would like to get it going on air again. As I'm into QRP and don't want to build a big power supply, I would like to dispense with the final tubes and just run the driver into the existing pi network to get a watt or two power out.

I'm wondering if anyone has done this. Also, as I lack a schematic, I'm after info on what voltages the Galaxy needs, and the connections to the rear power socket.

Many thanks,

Peter VK1PK

4066. Re: Unbuilt Kits (???)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-12 00:00:00 UTC
From: n4xy@bellsouth.net
Message-ID: <3377622d.639943159@news.atl.bellsouth.net>
Source record: 120060

Hi C.K. ... The way I see it, there are two things you can do with an unbuilt kit: 1) speculate by holding it until some later date in hopes of a profit; or 2) build it. (A 3rd is: try and decide which of #1 or #2 you want to do-but it really shouldn't count as a 'state' of mind since it is more or less the lack of one.)

If you choose #1... well, more power to you I guess. I do not have much to say about that choice.

If you choose #2... I personally favor this one. You ask why I would want to? Because it affords me the opportunity to have (in my own case: I'm working on this one) a brand new 1954 Johnson Viking Ranger I in 1997. One that I know is built to my own personal set of specifications. I think that's terrific! So, I will get the pleasure (that I get) out of building something and at the same time get the unique ownership perspective of that something also being 43 years old! Those things personally appeal to me. It may very well be true they do not appeal in the least to others. I don't mind that a bit.

All of this world is a matter of doing what appeals to you and avoiding what doesn't. Works for me.

Oh yes, watching an ART-13 tune, or the operation that a model 15 TTY
went throught to produce a single letter was absolutely amazing. Of
course, they also required a lot of mechanical maintence to keep them
working!

Fortunately, there are enough folks around that see the third option being to keep the kit in its state of "unbuiltness". Its like "land" and "real estate". Land has value -- but not in the sense that "real estate" has value. "Real estate" is just another piece of dirt that will eventually be another mall we don't need or another subdivision for more people to live in to further clog already unpassable roads.

I'll take the "land" any ol' time ...

Grant/NQ5T

4074. Re: Unbuilt Kits (???)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-12 00:00:00 UTC
From: n4xy@bellsouth.net
Message-ID: <3377b706.661664142@news.atl.bellsouth.net>
Source record: 120068

I sorta wanted to stay away from the "UNbuilt" fans (short for "fanatics" I understand) but the "land" comment invites criticism: this is not a valid argument for not building kits. Not to imply I have a pipeline into God's thinking about things, but I personally do not think He created "land" for us to put buildings on/develop. Whatever the purpose, I suspect the creation of "land" was a thing unto itself, and for its part, ended there. All this business about leaving kits unbuilt for posterity-or whatever-goes completely against the grain of what they were made for: to be transmitters, receivers, whatever. The idea that they join some great unwashed somehow ordinary body of built kits is absurd-to be kind. An unbuilt kit is a project waiting to be done. No one really appreciates rosebuds all that much: they are flowers waiting to bloom... and not much else.

Flame away.

Oh Wow does this bring back memories. An oft repeated procedure was to
synchronize a Collins Autotune system -- ART-13, ARC-1, ARC-27. One used
a hand crank and made sure all the dogs, pawls, cams etc fell into
place. Spent many an hour maintaining these guys -- but they were made
for the long haul and performed wonderfully. I recall calling Hickam
tower for a radio check and having Clark Air Force Base reply -- my
first DX contact by golly -- on an ART-13 no less.

I have two ASR-33 (also known as KSR-33) teletype machines in excellent condition with stands, power supplies, keyboards, paper tape readers, etc. that can be picked up FREE in Marietta, GA.

I will not ship these units.

Marv

P.S. And I will not pay you to pick them up......

Richard:

You will probably find that the copyrights if any have long expired an the
material is most likely in the public domain which means that you can
reproduce and distribute this material as you see fit. Most of the TM11s
I have seen do not have any copyright notice at all.

73 and enjoy your find.

4081. Re: Unbuilt Kits (???)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-12 00:00:00 UTC
From: nick@cs.unc.edu
Message-ID: <5l77ho$eqe@altair.cs.unc.edu>
Source record: 120075

Ed N4XY thinks my collecting unbuilt kits is absurd. He's right, of course. It doesn't make any sense. Well, no more sense than operating QRP, collecting art, fly fishing, model railroading, watching baseball, DXing, or any of a million other things we humans do for fun.

I collect unbuilt kits because I find the idea of preserving a bit of radio history gives me pleasure. Just as I enjoy buying a boatanchor at a hamfest and spending hours troubleshooting it and restoring it to operating condition. It is absurd to spend all that time and energy when I could just buy a new rig off the shelf, isn't it ? No it isn't - no new rig could give me as much pleasure as the detective work of figuring out why some old rig doesn't work and fixing it.

But Ed is right about the pleasure of kit-building and of having a brand new 1960 rig as a result. It is hard to resist that temptation.

Tell you what - I'll swap brand new Ten-Tec kits for any old unbuilt kits you might have. That way you get the pleasure of building a kit and I get to preserve a never-to-be-duplicated piece of our ham history.

73 from Nick KD4CPL, just another irrational human bean

Hi all,

I'm helping a high-school ham build his first tube transmitter around some 6L6s he got hold of, and while he's very enthusiatic he's noticed that his '93 Handbook doesn't have much tube info :) / :(So, I'd like to find him a Handbook from the tube era (say mid '50s to mid '60s) that won't break his meager bank. If anybody has one at a reasonable price please let me know and I'll put you two in touch. Thanks.

73,
Mike, KK6GM

Have a WWII vintage TCS-12 Collins rx'er/tx'er unit, no power supply and haven't been able to locate one. Have had this thing for more than 20 years. Got it out of a tractor trailer load of stuff from a military base heading to a dump back in the '70's. Looks to be in good condition, but I've never had it under power. Does anybody know of a power supply source or maybe trade this thing for something else? It's very heavy, separate rx'er and tx'er one on top of the other with an antenna coupler unit on top. 20W voice,
40W cw, 1.5-12 MC. freq. range.

I thought there was a FAQ about sending email between various services,
but a quick check does not turn anything up, and I can't remember the
name of the FAQ, if there is one.

But going to the Compuserve site, www.compuserve.com, there was
their own list of answerst to commonly asked questions, and from that I
found this:

" To send mail from the Internet to a CompuServe address, change the
comma in the CompuServe member's ID to a period (Internet mail
protocols do not allow commas in addresses). Then send mail to that
person using the following format:

70006.101@compuserve.com
"

Hope that helps.

you alt to see this hammarlund that phil restored. he is in atlanta. so
bob, give me a call sometimes, i am located in griffin, georgia. you'all
have fun with the old radios, i like them also. from n4pge.
Geoffrey Schecht (geoffs@onr.com) wrote:
: Save your money; photoengraving is a lot simpler. You'll go broke stocking
: all of the bits that one of those CNC engravers uses and the hold-down jigs
: required for the various panels you'll be doing is gonna run into a lot of
: money, too.

: If you have a PWB layout package that can produce Gerber plots (there are
: some public-domain or shareware ones out there that'll work) , you can
: create the panel on your computer and then photoetch the panel yourself
: (acid or NaOH for aluminum) or have it done at a plating shop. It's
: possible to use regular CAD software like QuickCAD, AutoCAD or CADKey to do
: the artwork and have it plotted and shot photographically at a blueprint
: house if they don't have something like HPGL-to-Gerber converters on hand.

: You can also cut a Rubylith photomask if you're really desperate for
: something to do; that's how they did it in the sliderule days and the front
: panels on the old Tek 500-series scopes do look pretty good. Any blueprint
: shop can shoot the ruby onto orthographic line-art film for about $30; then
: you're in business.

: Either way, you wind up with a photomask that's good for a zillion panels
: if you take care of it when you're using it.

: Nearly all of the WWII and later era panels that have sunken/raised
: lettering were done with a photoetching process. The neat thing about the
: sunken letters is that you can fill them with paint for a really
: professional look.

: You can buy a can of photoresist spray-on at an electronics supply house
: (positive or negative working, take your pick). I think that GC Electronics
: sells it in kit form. Kodak and Shipley (if Shipley's still in business)
: sell it in larger quantities but it doesn't keep well and the last time I
: checked; you couldn't buy less than a gallon at a time. It can be exposed
: under a shortwave UV lamp and I think that Kodak KPR is exposable under
: sunlight.

: Trust me, a can of photoresist weighs a >lot< less than that CNC mill,
: requires no CAM programming and your artwork is limited only by the
: capability of your CAD package.

Message-ID: <5l8crc$47h$1@newsd-5.alma.webtv.net>
Source record: 120085

AGC ??? What AGC??? Take a good look at the schematic.. Note how it's getting the AGC from a capacitor and resistor in the audio circuit! Thats why some signals are LOUD and some signals are s-o-f-t.

You gotta remember the SBE sold out to Raytheon. Raytheon makes military radios and the military doesn't DX or Contest. To them, an S-9 signal is in the 1 volt range...

..but to be fair, both the SBE 33 and 34 remain to this day the smallest HF radios (with 120VAC/12VDC power supplies built in)

The secret was the bi-lateral design. Each stage is used for both RX and TX duties by "flipping" the stages using a nifty transistor switching circuit. Good RX performance came from the Collins XTAL filter inside.

There is alot to learn from this design.

I have one. I love it and will be glad to help you with yours.

Hello

Looking for info on a rig I just picked up at a swap meet.
It's a 10 meter crystal controlled transceiver using a complement
of 13 tubes.The finals are pair of 6AQ5's.Rig was designed for
mobile use as it incorporates a vibrator for B+ voltages.It seems to
have been offered as a kit with the names of both The Livonia Radio
Club and The Intercounty Radio Club of Detroit mentioned in the manual.
The manual has a publishing date of 1958.Ring any bells out there?

> hopes of a profit; or 2) build it.

Not everyone is motivated by option 1 (greed, I suppose), or option 2 (would that be lust?).

A third option might to be preserve the kit as a valuable historical artifact.

Maybe it's because I work for a museum, but the idea of preservation is an important issue for me. Preserving the past is the motivation that drives museums. I feel it is of vital importance to save pieces of amateur radio history (kits or otherwise) to create a context with which future hams (and other interested parties) may look back with some degree of understanding. Additionally, in the case of Heathkits, I feel the preservation of unassembled kits plays a key role in the understanding of the company. Kits were, after all, Heath's reason for being.

Unlike assembled products which endure, a kit--once assembled--is lost forever. And when the last kit has been found and assembled, something unique and important will have been lost. But regardless of what they are (kits or something else), the artifacts of history, and what they have to teach us, are important. I know there have been a few small efforts to preserve amateur radio artifacts, but until someone puts some serious money into the effort, the job will fall to those individulas who understand the importance. And that, for many, is reason enough to buy and hold an unassembled kit.

I remember the distintive smell when unpacking a new Heathkit, and also
that special brown paper packing material they used.

I too think it is worthwhile keeping a few of the unbuilt kits around --
chances are the smell is gone though!

Our final announcement (thanks to all who have endured the earlier ones!)

The Greater St. Louis Antique Radio Collectors & Historians (A.R.C.H.) invite you to their annual picnic & mini-swapmeet.

When: Sunday, May 18th, 1997

Time: Swap begins around 9:00 a.m. Lunch served starting at 11:30 a.m.

Where: Tiemeyer Park in St. Ann (3311 Ashby Rd. between St. Charles Rock Road & Midland Blvd).

There is no "swaptable" fee for this event. A small donation for the picnic is requested ($3.00 per person).

This is a low-key event and family members are welcome and encouraged to attend. Visitors are welcome and encouraged to bring items to swap! We hope you can stop by and spend a few hours with us enjoying our picnic and sharing the antique radio hobby with our members.

For more information, please contact Derek Cohn (WB0TUA) at keymaster@stlnet.com

Ernie:
The original CMOS Super Keyer had an output circuit with two different transistors, for keying either grid-block tube rigs or positive-keyed solid-state. The negative-keying circuit uses a high-voltage (but low-current) PNP transistor. (The old WB4VVF Accu-Keyer used the same scheme.) This should work for most any keyer and grid-block-keyed rigs.

I'll be glad to make an ASCII diagram
of it when I get home -- let me know if you need it.

Ted Zateslo, W1XO

Whoo hoo! This brings back a memory for sure. Somewhere in that same time frame, I bought a nice multiband transmitter. I thought it looked kind of homebrew. And was scrounging through some of the older (at the time) hand-books. I found it in a 1956 edition.

I had it on the air a few times, and ended up selling it. With the book.

Ahhh, fond memories of a mis-spent youth...<grin>

Semms if I remember, it had National style knobs on it. Flat black bars with metal dial skirts..

Seems to me, that it is very hard to find a "brand new" Johnson Ranger.
You will soon own one. I think that's wonderful. Most of us are in-
volved in the vintage radio hobby to capture a piece of the "way it was".
I can think of no better way, than constructing a classic transmitter.

I'm certainly jealous!

By strange coincidence, I picked up an SBE-34 at a swapmeet this last weekend. It works (at least it receives, which is all I've tested so far), but after 5 minutes or so it starts to drift like crazy - very very annoying. Has anyone ever experienced this, or know of a fix? I don't have any manuals on it, so at the moment am just shooting in the dark.

Thanks,

- Jeff, WA6AHL

Source record: 120005

To add my 2 cents to this interesting thread, I might add that in recently perusing most of the QST issues for the '30's I would tend to agree with Michael's assessment of commercial transmitter availability. About 2/3 of the construction articles are for transmitters, maybe more. There are many ads for commercial receivers. There are lots of photos of ham shacks and almost all of those feature homebrew transmitters while many have commercial receivers. There are very few commercial transmitters offered in ads. There *are*, however, a fairly large number of transmitter kits(and assembled kits) offered by small outfits or by amateur radio parts suppliers. The main exception to this scenario is Collins. Collins was offering their line of top quality transmitters early in the Thirties, and featured their full page ads on most of the inside front covers of QST issues. National very clearly dominated the receiver market, at least as far as quality and advertising was concerned. Few receiver kits were offered, as there was a high availability of good quality, affordable commercial examples. National's presence was very high, as for example, James Millen, beginning in 1935, I believe, began a series of full page chatty letters to the amateur community. These were, of course, commercials, but they also offered lots of the current high tech thinking that was making National the top receiver and electronic parts designers in the world. This series continued until Millen left National in 1939, I believe, and was a good example of the high commitment of National to top quality and cutting edge technology during James Millen's reign. Even their least expensive receivers were considered the best available in their class. National did not make a *cheap* receiver. Millen was also an occasional contributor of construction articles in QST as well. Collins presence was not so well promoted as Nationals, but they had established a position of offering equipment of the finest quality, very early. I have yet to see a "entry level" Collins ad in QST. Even the construction articles made note of the fact that receivers were being built primarly by the amateur who was pretty strapped for cash. On the other hand, the articles admitted that the only way to get a state of the art transmitter was to build one yourself.

In article 100000@Ocean.CAM.ORG, Michael Black <blackm00@CAM.ORG> writes:
>You make a good point. I was thinking about this just the other day,
>when I saw a post from someone looking for 1930's vintage "boatanchors".

I would like to introduce you to a new tool : The Digital Experimenter.
The Digital Experimenter is a usefull tool that you can use to desing
digital circuits and to debug a malfunctionning circuits.

The Digital Experimenter includes basic input and display functions that
permits the designer to concentrate on the application instead of the
display.

Display circuits (such as BCD 7 segment displays) can take a lot of
space. With the Digital Experimenter, you have four BCD 7 segments
displays avaliable so you don't have to bother about the space they
use. There's also an 8 bits binary display, two bounce free logic
switchwes, 8 data switches, fixed and variable square wave frequency
generator. You also have access to four SCHMITT Triggers.

As you can see, there's a lot of usefull tools that the designer often
needs. All these functions are on a PCB that plugs directly on a
beadboard. If you want to know more about this wonderfull tool, come
visit our homepage at:

http://www3.sympatico.ca/ldee/injueng/

Or email us at:

I wish you lived closed by, Garrett; I'd jump at your offer. I used a
TCS transmitter for quite some time. As I remember, the power supplies
were pretty straight forward. I installed an mike audio stage back in
the left rear corner (I forget what was in there; seems like a small
dynamotor or something). It worked great; ran about 800 volts to the
1625s. If you're just across the bay, lemme know; I'll be right over to
pick them up! :-) 73 de NE3A, Ron

CUSHMAN COLLECTORS ONLY - -

Pristine MCM-5 about to be orphaned. 1972 vintage;
original factory cal and inspection paper tag still
tied to carrying handle, front cover with original
cal sheet dated Dec 7, 1972 STILL IN PLACE,
has 0.0001% high accuracy factory mod built in,
has the "newer" nice rectangular plastic-faced
Weston meter, single owner unit, high 8 on the
venerable one-to-ten scale as far as physical
condition goes. About forty factory crystals
installed for various commercial bands.

NO MANUAL. Operational condition unknown,
but was in service when replaced with newer
equipment.

DROP DEAD DATE to make an acceptable offer
is Wednesday, 05-21. (Broad hint: the first
offer I get that covers the shipping will probably
get it, so I'd hurry if I were you...)

This unit cries out to be in your shack!! Don't
wait! Someone else is probably composing
an offer as you read this!

The unit is currently located in the People's Republic
of California.

PS - I'm still actively looking for plug-ins, internal circuit
boards and/or a spare CE-6 (or CE-6A). Especially want
an EXTENDER BOARD for servicing the plug-ins...
Will pay cash!! Please contact me!!

4116. Roundtable for CW Boatanchors --- interested?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-13 00:00:00 UTC
From: rdkeys@unity.ncsu.edu
Message-ID: <5lagro$o0u@uni00nw.unity.ncsu.edu>
Source record: 120012

OK, we have had a lot of interest here, on the r.r.a.b group for a few weeks. I will open up an invitation to all the CW types aboard the watch, for a roundtable on 160/80/40M, that is open to all the Boatanchorite types, if you have an interest.

There have been, for several years, a number of us ``Boatanchor'' and ``Glowbug'' types (Boatanchorites you know what they are, Glowbuggites are folks that like to build boatanchors from scratch, the old fashioned way), on the net, in closed lists. We meet almost every evening on one of three frequencies, for a goodly time of old fashioned brass pounding. Since I am the fellow/fool/idiot/nut/pick-one, who started it (or I suppose I lay most claim thereto, with the support of a few other diehards), I will take the responsibility for opening the ``roundtable'' up to all CWist Boatanchor types that wish to join in (FYI, a CWist is a person wat likes CW as a profession, or a hobby, kindof like ol' Duke Wayne as the Shootist).

So, if you have an interest, and a boatanchor to suit, and some 'semblance of a fist, you are most welcome to join in.

QTR 0000/0100/0200Z (basically just at sunset or a little before/after)
QRG 7050KHZ

QTR 0200/0300/0400/0500Z (basically anytime after dark)
QRG 3579R545KHZ

QTR 0200/0300/0400/0500/0600Z (basically any wintertime after dark)
QRG 1802R500KHZ

CALL --- CQ BA CQ BA DE <yourcall> <yourcall> K (one or two rounds on the top of the hour suffice --- don't overdo it)

At 0300/0330/0400Z on 7050 call CQ CWIST CQ CWIST if you wanna let the lead outten yer sendin' iron, else stand clear.

Officially, everyone is meeting on 7050 at 0200Z, with a QRQ CWist fraction meeting at 0300/0330/0400Z on 7050 for CW that pulls the stops outta da sendin' iron. This is for the summer rounds. In fall and winter and early spring we fall back to 160/80M. The QRQ CWists are not all that frequent, so if they are not there the BA types keep on going.

One of the purposes of this ``roundtable'' (it is not a formal net, but a loose roundtable that is most informal, and sort of run by whomever gets there first with the most signal heard by all), is to give folks a good opportunity to wring out those boatanchors and glowbugs that have been sitting on the shelf too long, and put them to use. It is also a good place to bone up on your CW, exchange OT radio related info, and if you

are one of the QRQ section, to rattle an' bang the fire outta that brass monkey sittin' on the table.

The reason we use the 3579R545 QRG is because of the availability of TV colorburst rocks which just happen to work fairly well in old novice rigs. The other QRG's are just what happened to pass. There may be high and mighty QRM present from that silisidbandstuff and the rittyrattybingbang stuff, but that usually doesn't bother the diehards.

Anything from a 1920's Hartley oscillator to a latemodel 6146 rig, and everything in-between is likely to show up, at one time or another, WWII surplus, breadboard bottleburners, and all manner of like kind, also. Regen receivers and hot R-390's often are used for the RX. Straight sendin' irons, bugges, cootie keys, and fancy keyers are used.

So, if you have an interest in actually using that dustbunny ironmonger's delight that you treasure as a boatanchor, or that fine little glowbottle puffer you put together last weekend, then you might consider joining in on the roundtable, sometime.

73/ZUT DE NA4G/Bob UP

(if someone wants to pass this along to the Boatanchor closed and free lists, you have my permission).

4124. Help! Need Morrow info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-13 00:00:00 UTC
From: jeffa@ix.netcom.com
Message-ID: <5l9n6q$fj8@dfw-ixnews10.ix.netcom.com>
Source record: 120020

I recently picked up two pieces of old Morrow equipment (similar to those that I had 30 years ago in high-school), and need to find some manuals for these so that I can get them operational.

The people I normally try for manuals (w7fg & tannenbaum) don't have them listed. Can anyone else help me out? I'll be glad to pay.

The units are:

FTR-2
5BR-F

(Don't know what the suffixes mean.)

Thanks!

I want to thank you, and all who responded via E-mail. It appears I'm not the only one crazy enough to admire the imagination those SBE engineers employed when they designed this little rig. They might have missed the mark on a couple areas, but considering the decade in which they were built, I think they did pretty good. Jim Lockwood's info was most helpful, and I'm searching for Walt's article myself. This project brings back memories of when tinkering with radios was fun; I wouldn't even THINK of poking around in my Kenwood! 73 to all, and thanks again for the helpful responses. de NE3A, Ron ...-.-

4128. Heathkit DX-40 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-13 00:00:00 UTC
From: ghiscox@netcom.com
Message-ID: <3378b7e7.7203904@10.0.2.1>
Source record: 120024

Trying to get a DX-40 back on the air. No schematic. A previous owner added (very neat job) mod for SB-10 ssb adapter (I'm not kidding, either) with nternal relay and two SO-239 on rear panel. I want to return the internal wiring to original and use the relay and added coax fitting to perform as an antenna relay.

Anyone have a reference for the SB-10 mod, perhaps from an old ham radio magazine?

Does anyone have a DX-40 schematic they would copy for me?

My immediate need is for the accessory socket pinouts.

Thanks,

George, WA6RIK

4129. Re: Unbuilt Kits (???)

>they are flowers waiting to bloom... and not much else.
>

I agree. The best way to spread appreciation of radio history is to actually build as many unfinished kits that exist and place them in the hands of owners who both appreciate them and use them on the air (most important!).

I remember hearing a radio program pointing out that the house of some great author/poet has been beutifully restored and is open to the public, but there are currently no books containing that writer's work in print. Thus unles you come across something in a second hand bookshop, you do not have access to that person's literature, and what it said about society at the time that it was written. The view expressed was that it was far more important that the writer's work is read, taught and is available to the public than whether the house they lived in has been restored. I couldn't agree more.

Let's move to something closer to amateur radio. You sometimes read about telegraph museums, and private collections of keys, telegraph equipment, etc. You then also see the occasional advertisement from the newcomer to radio for a Morse key to learn Morse. It is my view that Morse is best preserved by encouraging more and more people to learn Morse and use it in their everyday operating, rather than have glass cases full of unused keys in some ham's private collection. This hoarding may even be counter productive to the preservation of CW, if it makes used keys more expensive/less obtainable (ie they become like valve radios). Make Morse a living mode, rather than one whose relics are boxed up in glass cases in the hands of a few private collectors.

I think a similar analogy applies to vintage kits. Give your fellow hams the pleasure of hearing your vintage kit transmitter on the air. The best way to preserve and promote historical radio equipment is to Build it and Use It!

>exists. I have never seen one.

The SBE-36 is a real radio that was also sold under the Robin (or maybe Robyn?) brand name. Unlike the SBE-33 and SBE-34, which were assembled in this country, the SBE-36 was an import sold under the SBE logo. If memory serves, the 36 was marketed after SBE was acquired by Linear Systems in Watsonville CA. It's an interesting set, I suppose, but it lacks the quirky charm of its predecessors.

Jim - km6nk/4

4131. F/S: Power Transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-13 00:00:00 UTC
From: James Parsons <k5rov1@worldnet.att.net>
Message-ID: <3378D846.509A@worldnet.att.net>
Source record: 120027

I have for sale two power transformers, new, never taken out of the box. These were taken off the shelf of a wholesale radio store that went out of business about twenty years ago, and have been on my shelf ever since.

Stancor P-8156
Primary: 117 Volts, 60 Cycles
Secondaries:
730 Volts C.T.@295 Ma. D.C.
5.0 Volts @2.0 Amps
5.0 Volts @6.0 Amps
12.6 Volts C.T. @5.0 Amps
Weight: 16 lbs

Stancor P-8350
Primary: 117 Volts, 60 Cycles
Secondaries:
700 Volts C.T. @270 Ma. D.C.
5.0 Volts @6.0 Amps
5.0 Volts @2.0 Amps
6.6 Volts @7.8 Amps
6.3 Volts @1.6 Amps
Weight: 13 lbs

These appear to have been replacement transformers for television sets of their day. Make an offer, but remember they are heavy.

Jim

It is your kit, you paid for it. If you enjoy just having an unbuild
kit, that's great, if you enjoy building it, do it. Do what ever you
want and don't worry about what someone else thinks about it.

4140. QUESTION re.HRO60 XTAL CAL!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-13 00:00:00 UTC
From: "Yves A. Feder" <y.a.feder@snet.net>
Message-ID: <33784BBF.1307@snet.net>
Source record: 120036

Interesting problem with the standard xtal cal on my HRO60:

The 1000 kc. sig is fine, but no 100 kc. - can't find the schematic
for the calibrator unit. Does anyone have any idea? I'm guessing
there's a divider circuit that's not working and that the xtal itself
is probably all right....

Thanks for any (constructive!) comments!!

Alan I'm not aware of a Drake Users Group, News Group, or Reflector, let me know if you find info on same as I have over 90+ reflectors at URL:

http://pw2.netcom.com/~ac6v/pageae.html

There is (was) a Drake Net as follows:
Drake Net Sat 00:00 UTC 3.865 MHz

Good Luck
Rod in San Diego

No idea of where it originates from.

From: Chuck Penson <penson@sci.mus.mn.us>
Message-ID: <3379C3C4.5FEC@sci.mus.mn.us>
Source record: 119950

Peter Parker wrote:

> I agree. The best way to spread appreciation of radio history is to
> actually build as many unfinished kits

Why build unassembled kits? If one were really interested in spreading the appreciation of radio history one would encourage people to grab a handbook and do a little home brewing. After all, building your own is really were it all began.

> I think a similar analogy applies to vintage kits. Give your fellow hams
> the pleasure of hearing your vintage kit transmitter on the air.

You don't need to build kits to give your fellow hams the pleasure of hearing your vintage kit transmitter on the air. There are zillions of vintage kit transmitters already assembled just waiting to be fired up.

With respect to Ed Tanton's comments that...

>leaving kits unbuilt for posterity-or whatever-goes completely against
>the grain of what they were made for: to be transmitters, receivers,
>whatever. The idea that they join some great unwashed somehow ordinary
>body of built kits is absurd-to be kind. An unbuilt kit is a project
>waiting to be done.

At the risk of putting too fine point on this...you just don't get it.

Well Ben, what has worked for me is Formula 409. The nice thing about this is that it won't degrade paint and the like. I pull all the tubes, etc, and use a soft cloth. Of course, any rust or corrosion will remain. Just a tip. GL de KA9YZB.

4150. Help with G-R

Source record: 119955

I am in the process of restoring a General Radio 605-A Standard Signal Generator. I've already repaired the RF deck, and now have output on all bands. Really interesting failure mode...several RF coils were wide open. On close inspection it appears the litz wire (difficult stuff to work with) was soldered to the terminals using a corrosive flux which rendered all these joints useless after 50 years or so. I can't believe G-R did this...they would've known better. I'm guessing they contracted out the coil fabrication and the supplier used an acid based flux to solder the wire to the terminals on the ceramic forms.
The generator now works except for no carrier modulation. Inspection reveals there is an open/shorted modulation transformer. One winding is open and shorted to the frame. The xfmr is labeled "605-30"; I assume this to be a G-R part no. Does anyone have a schematic of the 605-A and/or can anyone give me impedance specs on the transformer? It is a 4 port device; terminals labeled "P","G", "B+", and "M". I assume this is plate, grid, B+, and "meter" (there's a switchable carrier level/modulation meter). Any ex G-R employees out there or anyone that can furnish any help? Much appreciated. Thanks!

I recently acquired the mike but it doesn't work well with my rig due to its (supposedly) high impedence. I need to know the impedence of the mike so I can get a transformer to match it to my 600ohm mike input on my rig (Tempo One SSB).

It would really help if folks posting buy/sell notices here would include their geolocation, including ZIP!

Reason? Most people can make a reasonable guesstimate of the weight of an item, and can then go to the UPS Web site (http://www.ups.com) and obtain the shipping cost. Many times shipping cost makes the difference in whether a person wants pursue a transaction or not. Saves a lot of back & forth e-mail, etc, etc.

Hi Gang,

Here's a preview of gear I'm selling at Dayton (Flea Mkt 2757). If somebody wants any of this, they can take delivery there. I don't want to ship it. All equipment hss been thoroughly cleaned inside and out, recently aligned with lab-grade instruments, and is cosmetically excellent (except as noted). All tubes checked, replaced if necessary, and show full output on a TV-2/B.

1. Ameco T-62 and VFO-122. A six and two meter AM/CW transmitter, with matching VFO. Recently aligned, full output. I replaced paper and electrolytic capacitors in T-62. Cabinets, panels beautiful. $135.

2. Collins KWM-2A: Round emblem, excellent inside and out, serial number in the 16,000s. No blemishes at all on panel, cabinet recently refinshed by Chuck Rippel and looks like new. full output, all original. $525. For an extra $100, will include a PM-2 power supply, with matching hardware.

3. Heathkit Seneca: Six and two meter AM transmitter, with built-in VFO. I recently aligned it, and it works great. In beautiful condition, inside and out. Wiring is exceptionally neat. You won't find a nicer one. With original manual. $145

4. Murch Ultimate Transmatch: A 2KW transmatch, with built-in fwd/ref power meter. Uses custom rotary inductor, and large split-stator variable caps. Some scratches on cabinet, but doesn't look bad. $95

5. National NC-155 receiver: an 80-6 meter ham-band receiver, styled in "cosmic blue" color. Price includes matching speaker. Cabinet has minor scratches, but looks generally fine. Has non-original built-in 100KHz calibrator; I thought the previous owner's wiring was sloppy, so I redid it, using the circuit out of the SX-115. Works great. $100

73,

Jim W8ZR

Hello,

I have a very nice WWII low frequency receiver covering 200kcs to 2mhz. It is stamped accepted by USN 10-15-43 and is marded CAY 46076 and also RBM-4. I has an interesting original small window compartment on the face panel that reveals scrolled paper for writing frequencies of interest and storing them. The receiver is in excellent all original physical and electrical condition. I used it to log beacons. Requires power supply.

Asking $65 plus shipping or best. I can be reached at 810-332-5429 between 6pm and 10pm EST.

Thanks,

Peter N8EVJ

Thanks for reading this message!

I'm looking for charts and / or manuals / schematics for two Superior test instruments. One is a SUPERIOR 85 Tube Checker with 850 Adapter for compactron and novar and the other is a SUPERIOR 76 C/R Bridge and Signal Tracer.

Of course, a copy would be fine. I would gladly pay copying and mailing expenses.

THANKS!

Best regards.

This coming Sunday..

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
May 18th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

A discount sellers SEASON PASS is available for
$50 per space if purchased by April 20th.

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Yup - "Mea Culpa" Dave, he he he! He got me!
But tonight was a different story on the ol' Glowbug QRG!
I was working VA3RP when the RTTY op with no receiver cranked up right
on top of us.

Well, ,lo and behold! Old VA3RP's Drake TR4-CW was 20 dB over S-9 and
I could still hear him fine over the QRM!

I think he must have lost me though because I was just running the
little old Edlico 1625 rig with 25 watts out to a G5RV!

4178. need help with AR-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-15 00:00:00 UTC
From: Reed Park <reedpark@nbnet.nb.ca>
Message-ID: <01bc60e1$a0c05a80$4c86b3cf@reedpark.nbnet.nb.ca>
Source record: 119974

I am trying to find a schematic for a Heathkit AR-3
general coverage receiver. I tried the usual places
that handle manuals, but the AR-3 seems rare.
Any help would be much appreciated. Picked up the
little devil at a flea market, and it seems the original
owner did a poor job of construction.

regards
Reed

Hi,
I got there late as usual. Half the vampires had split. My

eyes perceived a small yellow keg, floating on (either
mirage or BS).
I swam faster , even the sharks, slowly,endlessly, making
their way home @ 5 MPH, through the parking lanes, did'nt
have time......
Anywhoocoa, although baby-cold-warrior like me,has seen,
an Angry-109. The only time i have seen an AN/CRT in TV,
was the the movie "Voyage of the Yes".
Briefly, It impressed me gravely,s i was packing one
night for Boy (When Boy's were Boys) Scout trip.
In the movie , a young guy,1970s, needed a hand,
out of So. Calif., USA. to sail a boat to Australia?.
A black kid,(wanted), takes his ad in the paper,
and they go through the usual boat deals, til,
gangane sets in,due to :_____
If ur 1st xyl only gave u sand rash, then u missed
salt rash.I.E "From Her To Eternity".
Never did crank a Gibson Girl, but I've met Kelly girls.

Al,

The calibrator contains two separate crystals, 1000kc and 100kc. The
correct one is used depending on the position of the Calibrator front
panel switch.

I have the shematic for this unit (but no calibrator, alas!).

Wasn't that the same as the NC300... an optional unit? I think the
model is XCU300 or something like that. The schematic might not be
with the HRO, but with the cal unit.

As I have said before, any ham who is concerned about these type of issues should be ARRL members. And any ham who enjoys ham radio should also be ARRL members. They arent perfect - neither are any of us.

Stories about the League selling radios for the Japanese companies and looking to create an even bigger empire are total bull - the type of things you hear on the high end of 20 meters and the nutcase nets on 75.

The ARRL is what we make it. If we sit back and just complain we'll get nothing more than what we put in.

Mike - I suggest you get to the library or find a copy of the ARRL "How to Become a Radio Amateur" from the early 1960s or late 1950s. It had a most interesting 6v6, 6f6, 6L6, one tube oscillator transmitter build on a pair of wooden slates chassis and using bell wire home made coils with "pop ciles" stickes. With a matching power supply. Actually the circuit was from an QST article of about 1947. In which the transmitter was had no power supply, but a long power cord with an octal plug on the end matching the 6L6. The idea being you would take the final audio tube from the folks radio, plug it into the transmitter, and the power cord into the empty radio socket. Us hams of the late 1950s cut our teeth on that rig and made a lot of "DX" with it not knowing any better.

If you are interested, drop me your US postal address and i'll send you a copy about the little rig in a recent ER, old timers magizine.

It appears to work fine. Nice pictorials but demands
JAVA for more (?). I'm not enabling Java until it get a clean-
bill-of-health. Too much at risk on my system. Sorry.

Send three bucks plus postage (maybe three more to VE?
he'll refund any over) to:

Don Beehler
456 Bennett Street
North Tonawanda NY 14120

Don's phone number is (716) 694-8447.

I sent him five bux for an S-38 manual recently; he sent me
a very satisfactory document. Not an original manual, but
it'll do very well. He also sent me back one dollar.

I still wish this guy sold cars.

Hope this helps.

4200. Heathkit TT-1 tube tester survey

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-16 00:00:00 UTC
From: jeffa@ix.netcom.com
Message-ID: <5lhknm$ec2@sjx-ixn8.ix.netcom.com>
Source record: 119898
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I've finished (I hope) repairing and recalibrating my Heathkit TT-1 according to the manual's instructions. However, while making a seperate transconductance measurement I've found that the TT-1's meter reading is off by (roughly) 30 percent.

I don't know if this inaccuracy is unique to my unit, or if it is common to others. And because, as a kit, each TT-1 is custom, so to speak, there could be quite a bit of variation from unit to unit. I'd like to gather additional information from other users to check on the meter's accuracy, and thus propose the following:

I'll supply a small number of tubes (6, say). These will be my 'reference' tubes, and I'd like to send them to TT-1 owners for measurement on their units. Once the measurements are made, return the tubes to me along with the transconductance reading for each tube. I'll then correlate these readings and publish the results.

I'll try to include return postage with the tubes, but this could become expensive if there is much interest - perhaps the return postage might be handled by the other end (don't forget, this is in the interests of science!)? Or, perhaps we can do this as a "round robin" mailing, with each participant paying the postage to the next person on the list...

Anyone interested?

Thanks,

- Jeff, WA6AHL

4203. Ameco TX-62 *HELP!*

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-16 00:00:00 UTC
From: jw@alpha1.csd.uwm.edu
Message-ID: <5lhqvj$im@uwm.edu>
Source record: 119901

Ok all you old timers:

I recently purchased an Ameco TX-62, 6 and 2 meter cw/am xmtr
plus matching VFO. I get a solid 10+ watts ouput on 6 meters, but
I'm not able to key it. When it's on, it's transmitting. Only by pulling
the vfo can I unkey. Poking around inside gave me no clues as to
what's going on (Okay...so I'm no electronic whiz).

The guy who sold it had no manuals, was just happy to get rid of it.
(Heck for $5.00 ... even if I only get a few hours playing with it...
such a deal!).

Can anybody provide any insight or have any manuals they can
copy??? I'd like to get this thing on the air!

Thanks!

Hi,

A while back, I listed a want ad for a Knight Star Roamer. I thought I knew what one looked like. Since then, a few guys have responded and I found out that it's a different radio than I had imagined. I would appreciate it if anyone could point me in the direction of a picture of one on a web page, or if someone could email me a picture of one, because if I like the looks of them, I'll buy one of them anyway.. Can't have too many receivers!! :)

Thanks,

Ken Knapp, N3GBW

How would you like to stay connected to your desktop
computer at home or at work with a wireless connection
to your laptop computer? Move from room to room or
relax in your backyard while you surf the Internet,
receive email, or run ANY applications!

Well, you can do this and more with the Netwave
wireless link.

FOR SALE - Netwave Wireless Networking For Your Laptop!
Consists of two items:

(1) Netwave AirSurfer Wireless LAN PC Card
Tiny card plugs directly into any PC Card
slot on your laptop computer.

(1) Netwave AirSurfer Access Point
Small 2GHz transceiver with another PC
Card which attaches to your desktop
computer.

** As New..in the box with all manuals, asking
$750.00 or Best offer...(I paid over $1600.00 new).
Will consider trade for various Ham gear...especially
Collins, Drake, vhf/uhf amps (10w in - 100w out),
let me know what you have...will consider all offers.

You can contact me via email at sandy@sandy.com
or call (408) 257-5383.

To find out more about this great product, checkout
Netwave's Web site. All product info and free software
updates are available at:

http://www.netwave-wireless.com/products.htm

I sold my IBM ThinkPad recently ...so don't need
this anymore. The Access Point is brand-new, tested
but never used. I had a minor problem with my original
unit and Netwave replaced the entire unit just before
I sold my laptop..,so you get a brand-new unit.

Here's what I did:

The crystal element was bad anyway, so I put a Heil element in its
place. The impedance of the Heil is about 2,000 ohms it it works great
with the solid state rigs.

>
> At the risk of condemnation and being forced to walk on broken tubes,
> what solid state device could be used to replace a 5U4GT rectifier
> tube in a WRL Globe Scout transmitter?
>
>>>>>>>>A couple of silicon diodes @1kv or better PIV and the most
important part a series dropping resistor. 5U4s have a
relatively substantial internal resistance which drops the
raw supply voltage significantly. So, replacement with only
silicon diodes will result in B+ much higher than what your
Globe transmitter was manufactured to take. In my HQ170C
I measured the drop across the 5U4 and it was 42V. The raw
supply was @ 197V and the B+ coming out of the 5U4 was 155.
Bottom line, its OK to replace with silicon but size a series
dropping resistor or wait for a series of premature component
failures...

The 3865 "Drake Net", appears to be nothing more than a traders net, with vacuum tube era radios being the theme. (many being Japanese hybrids) It started with very good intention, but has been plundered and manipulated by hustlers suplementing they're income. There are no experts that frequent the net for technical help. Anyone who is, is usually pretty well intoxicated by the time the net gets underway. For technical assistance on RL Drake equipment, try www.rldrake.com They're not all senile yet, and still have alot of parts NOS.

Waterman Pocketscope Model S-10-A:

This is the small scope with the control knobs on the top of the case and the tube angled out of one of the ends.

Uses a 2AP1, 6AU6 vertical amp, 6J6 time base and horiz amp, and 6X4 rectifier. Rated at 23 watts 117 VAC, 5.75 pounds. 6" X 10" X 4" HWD.

With amplifiers, the deflection sensitivity's 1 V RMS/inch, and the "Fidelity" is -2 DB from 20 cycles to 100 KC. It's easy to get to the deflection plates for such uses as rf transmitter monitoring. Time base oscillator fro 10 cycles to 50 KC.

Has normal scope-type controls for selecting, intensity, focus, gain, sync, and ext/int/lin/hor functions.

Works fine, except that a new 2AP1 would be needed since this one displays off center and low brightness. Fair Radio has them for $12, last I checked.

Case is clean and in very good condition. Manual/schematic included.

Price $60 plus shipping if needed from Nashua, NH 03060.

e-mail or call (603)889-1067

tnx es 73,
-Pete

Hi John
From Bob Heil, K9EID's fine book "Heil Ham Radio Handbook", he discusses the hi Z mic into a low Z input. This of course swamps the mic and results in reduced output. He recommends placing a 100K or larger resistor in series with the D-104 hot lead. He also recommends a transformer to match impedances. He sez the D-104 works best into a 1 Megohm (or higher) load. So choosing a matching transformer from 1 Meg down to say 600 Ohms ought to do the trick.

Bob's book has no ISBN number -- but is published by Melco Publishing, PO Box 26, Marissa, Il, 62257. Lots of good info including microphone equalization.

The D-104 has a peaked high frequency response so when properly matched it gives sparkling highs -- good for breaking pileups. The Kenwood TS-850 even has a control marked "High Boost" which accentuates the high freq audio tones.

Reed,

I've had good luck with W7FG Vintage Manuals, at:

http://www.w7fg.com/

Unfortunately, he is listing an AR-2 Receiver but not the AR-3.
You might use the E-Mail option on his WEB site to send him a note
and let him know what you are interested in. He does search a bit
and will get back to you if he finds it. Manuals you get are
reproductions, but the quality is very good.

Source record: 119924

I have a question on the behalf of a friend of mine.
How do you connect a serial communication interface (cable) to
an ICOM IC-P2E? I have two cables connected from the radio (mic and
speaker) to the modem. I have a Baycom micro-modem, that is connected
through a 9 pin serial con. I wonder which treads from the two cables
should be connected to which pins (in the 9 pin serial)?

4229. FS: Cap Substitution Boxes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-17 00:00:00 UTC
From: jrininger@aol.com
Message-ID: <19970517194001.PAA19165@ladder02.news.aol.com>
Source record: 119925

I have two filter cap substution boxes for sale for $20
each plus 10 pounds of shipping from 93430.

It is possible to switch-select any value between .5 uf and
31.5 uf in .5 uf steps. 500 VDC rating. I use one for
diagnosing "hummers" on the bench, but I don't need three.

Please email if you are interested.

4230. Amazing little 5 tube BA RX uses 5 tubes and they are all the same!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-17 00:00:00 UTC
From: BOB DUCKWORTH <bob@atl.org>
Message-ID: <337DC511.2B2F@atl.org>
Source record: 119926

Thought some of you guys might be interested in this little RX.
It's a lot of radio for 5 tubes.

Mosely CM-1.

It's a 5 tuber employing 5 x 6AW8 (pentode/triode in the same hollow).

It's basically a 4 tube 80m band RX with a one tube converter (triode mixer and pentode xtal osc) with preselector that can be switched in for the other bands. The triode mixer is touted as having lower noise than a pentode mixer and an advantage on 10m.

The second 6AW8 is triode tuneable osc and mixer being a TRF on 80 and TIF on 40 - 10. IF is 455kHz with two transformers for selectivity. VFO runs 3955 to 4555kHz.

The third 6AW8 pentode section acts as a 1st IF amp driving the 'S' meter and another transformer. It's triode section acts as the first audio amp.

The fourth 6AW8 pentode is a second IF driving another transformer. These 4 x 455kHz IF transformers provide good selectivity and the RX is enjoyable to use on SSB and CW although I'll probably add an outboard 'Q' multiplier (hint, if you've got one in the junk box). It's triode section is used as a product detector.

The final 6AW8 pentode is the second audio amp. It's triode is the BFO. AM detection is handled by a 1N34 with a pair of 1N54A employed as a basic ANL.

Built in Bridgeton MO.

A note from "The Antique Radio Collector" <<
http://members.aol.com/wrldradio/index.htm >>

Beginning this month, we are happy to announce our affiliation with "Amazon.com " We believe you will find our new book store offers one of the most comprehensive listings of books and tapes relating to the collecting of Antique Radios, Old Time Radio and Amateur Radio, and related subjects offered anywhere, many with discount pricing. Hopefully, we have now found a way to support our website so that we may continue to offer "free classified advertising" to collectors and maintain a site you'll find worth visiting often.

You should also know that all transactions made from the store are handled directly by Amazon.com, through their "Secure Server" service, for your protection over the Internet "and all orders and shipping are processed directly by Amazon Books".

So, when you need a resource book or just feel like reading a good book (or listening to OTR audio tapes), please visit us at:

http://members.aol.com/wrldradio/bookstore/bookstor.html

<< "Amazon.com Associates" list selected books in an editorial context that helps you choose the right books. We encourage you to visit "The Antique Radio Collector" often to see what new books they've selected for you.

<< Thank you for shopping with an "Amazon.com Associate".

<< Sincerely,

<< Jeff Bezos

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

After all these years, I'm still looking for a Johnson Navigator.

Will swap
1 x NOS 4-1000
1 x 4-1000 socket
1 x NOS 4-1000 fil trans
1 x working 4-1000 (good for testing but not full output)
Excellent tube for a legal limit 6m amp that can be driven with 10W.

for a complete Johnson Navigator.
Need not be pretty as I'm looking to use, not display.

Or, can swap a Heath Apache. If you want to work AM,
2 x 6146 modulated by 2 x EL34 for fine audio
and I'll swap for that CW only Navigator.

Will swap 4-1000s and Apache if it's pretty.

-bob
wb4mnf

4243. 4-1000's plus acc, FT401 plus acc, and Heath Apache all to swap for Navigator!

Most of the Nazi recieving tubes I've seen have the shape of 201As and are encased in metal. AFAIK none of the Nazi tube types have any relation to American tube types or postwar European tube types.

Hi,

I'm looking for a reliable source of "pulls" from broadcast stations.
If you are able to supply me or know of anyone who can please drop me
a mail. 3CX1500's and 8877's etc are of particular interest but I'm
more than happy to look at any other types as well.

Regards

Mark

Hello There, Fellow boatanchor lovers!

I am looking for a replacement crystal for my HQ-180AXR. The crystal frequency is 100 KC and this rock goes in the back of the radio, in the calibrator circuit. The socket for the crystal is an HC-6, I think.

Any and all leads are welcome! When I bought the radio this crystal was missing, and is essential to the operation of the calibrator.

Thanks in Advance, and 73!

4253. TV7-A/U Socket Adapter?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-18 00:00:00 UTC
From: la8ak@online.no
Message-ID: <337f5249.5037556@news.online.no>
Source record: 119941

Hi
15 years ago I bought some TV7 tube testers, and I got a TUBE SOCKET ADAPTER KIT MX-949A/U (ORDER NO. 3029-PHILA-51)
I have 'unused' TV7A/U complete with book and accessories, but there are no referances to this adaper kit
A paper note says: Replacement for TV-7B/U 6625 376-4939 serial number 696. (taken out of service 1972-apr.28).
I am curious to the use of it, is it just to plug into an octal socket and use with the TV7A/U?

I have used the TV7A a lot some years ago, I was surprised to find adapter socket for 2C39/3CX100 which I need for my 23cm powr amp.
I don't use it much now because I got an AVO Valve charachteristic meter Mk.IV from a friend, the latter has many more function and it is possible to test a device at many different voltage combinations

hope to hear from you

Real nice SB-313, case has some paint chips, not bad at all, just a
few around the edge. Front panel excellent no wear on labeling at all.
all original knobs. original manual. Has optional CW and SSB filter.
Works real well. The LMO had a "warble", but it was a loose
(unsoldered) shield inside rubbing on cap. That has been fixed. Will
pack, ship and insure lower 48 for $185
please email if interested.
Thanks
Tim

copyright unless renewed is 28 years, is it not?
people are selling, for example, Heathkit copies
today, competing against the Heathkit company
offering the same thing, and apparently with no
danger of legal action.
something else to consider is that aside from a
few fogeys who are still "converting surplus",
most afficionados today are into retaining it in
original condition. a lot of the "first remove all
parts, then saw along line A-B" type instructions"
just don't appeal to surplus fans anymore.
in most cases, the complete original manual
is obtainable without too much trouble.

Well, actually I was "...very busy..." and did spend several hours on
the 'phone with those sources given as specializing in test equipment
manuals. None had a G-R 605A schematic. I did finally get an e-mail
reply from a gentleman who said he had copied the manual and would send
it to me. I am grateful to him. I admit I did not write to any sources
or didn't call any that were not listed as test equipment specific. My
intention was not to impugn your refernce list...I simply couldn't find
what I was looking for after 3-4 hours of diligent effort.

You can buy some very good books covering the German valves from DL6VW Werner Gierlach in K�ln. I visited him in his shack few years ago, it is easy to find becaus of a 3 el HF beam on top of the house in the suburban area.
1) Handbuch der Wehrmacht-R�hren 302pages with tables, text and pictures (DIN A4)
2)WM-R�hren "Ringbuch" (telefunken, Siemens, AEG, Lorenz, GEMA 397 pages showing details of the German valves, several of which you can now buy at radio rallies all over europe - believed to be russian ceramic technique power tubes, but they were designed by the Germans in the war, long before EIMAC made such valves (4CX250B came in 1958 according to my VADEMECUM..) (DIN A4)
3) a smaller book (DIN A5). Telefunken: Sende-, Verst�rker- und Gleichrichter-R�hren.
It is also available a book about RV12P2000- the first miniature valve ever (before 955) written two years ago by DL2IE
plus many more.....

This is not meant to be a flame, but when you comment on something
like this do not repost the entire article, as this not only helps the
original poster achieve his nefarious and illegal aims, but uses
valuable bandwith. You reposted to many groups beside your antenna
group (as I know this is going to the same groups, I'll keep it short
and request that the thread end here).

Better to report it to abuse@the.posters.isp and to the postal
authorities if it originates in the USA. I just did that with another
version of the same chain letter.

4275. Viking Ranger Info Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-19 00:00:00 UTC
From: Lance Sturdevant <lanvant@webspan.net>
Message-ID: <3380FCA7.4E5@webspan.net>
Source record: 119871

I am in the audio business and my dad is a long time ham. He just got a Viking Ranger with no microphone. I gave him an old Shure dual impedance I had laying around. The mic is wired for low impedance at its 3 pin XLR connector. Pin 1 is shield, pin 3 and 2 are signal. This is a balanced 150 ohm microphone but could be wired for high impedance unbalanced. When I looked at the schematic for the Viking Ranger, it was not clear as to how to wire the mic connector on the Ranger (J1). It appears to have an outer sleeve and two signal pins. Is this also a low impedance connection? What is the pin out for this connector?

Thanks if you can help
Lance Sturdevant

Nice Halliscratchers "TO" Model Electronic Keyer. Tube type, with
mercury wetted relay. Bring your own paddle. Works fine, appearance
pretty good (maybe 7-8 out of 10). AC powered.
$50.00 postpaid.

Hue et-al

I'm not so sure that conversion of a piece of surplus gear turns it into junk. A good conversion job is pretty rare and, in itself, is a piece of history. My Hallicrafters SX117 has been modified with a product detector like the example in the Dec 60 QST which was presented as a mod for the HBR-16. THe conversion was done well and the radio is better for it. I would not swap for an unconverted example as this one performs so well in comaprison. Likewise, I've a 40m command set that was built, with HB supply, into a rack mount TX. It works well and is much more interesting than a 'plain' ARC-5. THe best conversion I've got is an 80m ARC5 which has had a modulator added internally to the original unit.
It replaces the spot the roller inductor was in. The best part of this set is the homebrew microphone. Whoever did the conversion also built his own mic by cleverly folding sheet aluminum around a telephone carbon button. It has a slide switch and from 6' looks like a commercially produced mic. When I fire this up, it's easy to imagine the hours that went into making it the way it is. I've a HBR-16 (Oct 59 QST 16tube RX project) on the way. It will make a fine companion for the two ARC5's.

If in your hamfest scroungings, you happen to run across any clever conversions, let me know. They'll be at home here.

As for the kits, I like the idea of displaying the kit contents next to an assembled and in use version of the radio. The parts for an HW-16 framed under glass on the wall behind the operating position adds a lot of 'soul' to the radio. Once we have housing for the museum, I hope to set up one working operating position this way.

-bob

Does anyone have any books, photocopies, schematics, or any information
on a WW2 Signal Corps RDF Model "DAG-1"??

It's a self contained unit, using large dry cell, with shielded loop
and sense antenna, covers about 1.7 to 18 mhz.

Would like to refurbish and get operational. Any info will be
appreciated!!

Tnx - 73 Al W1UX

What luck. I make a set of adapters for the TV-7 series that adapt 9
and 12 pin sweep tube and allow test. Although the selection is limited,
the adapter set works with some 40+ tubes. The set is $25.00 delivered.
Let me know if you are interested!

4285. Need manual and schematic for Johnson Viking II

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-19 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5lpkkg$g2h@sf18.dseg.ti.com>
Source record: 119881
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

Greetings, BA lovers!

I picked up a Johnson Viking II this weekend at the Fort Worth swap meet for the paltry sum of $25. It's all there and in restorable condition. What I didn't get was a manual and schematic. Anyone have a book on the Viking II that I can borrow and copy? I promise to treat it carefully and return it promptly, and I'll pay all of the postage costs both ways. I'd prefer to do the copying myself.

Thanks and 73!

From: ho4bart@aol.com
Message-ID: <19970519143201.KAA29303@ladder02.news.aol.com>
Source record: 119882

Chuck, you sure you got it?
if you go back a few more years, past some not precisely
defined point, the unbuilt kit is more valuable than any
built up example, and more interesting too- with the display
of divided up/ packaged components, instructions, and so on,
the whole effect is an artistic and educational relic of a certain
period in electronics history.
altho monetary interests are maybe not primary in this case,
you can be sure that the value not only will not decrease but
will steadily appreciate, and more so than for any builtup
example.
yes, when it's yours, you can damn well do what you please
with it.
this is not a perfect analogy, but i remember talking with some
fellow who was telling me about how he was "converting" a
Navy type MBF transceiver. when i pointed out that it was
basically ruined (as a collectible) after he was done with it,
he said "i don't care what any senile collector thinks". ah,
well, easy enuff to butcher, and it was his to do with, and he
"got it on the air" (VERY important achievement), but he
essentially produced a valueless piece of junk.

I thought they restored the front and most other interest is to sell
and buy....?
Mine is to use it, and to study the technique behind.... An old rig is
worth taking the trouble to do some smaller modifications on, if this
is important for the use. But of course we use the old cover on paper
capacitors and put some modern capacitors inside to make it look old

John,

I would reccomend that rather than use a matching transformer (tried that), that you build a simple single transistor preamp that has a high impedance input, and low impedance output.

The D-104 is about 5K ohms, but depending on age, actual element, and condition, could realy be anywhere from 1K to 10K ohms and still be good.

If you don't have access to a schematic for the preamp, e-mail me and I'll send you one.

Ron, N7TAW

4304. Testing compactrons and other unlisted tubes on a TV7 D/U tester?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-20 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseEAGL2E.B0v@netcom.com>
Source record: 119811
Cross-posted to: rec.radio.amateur.boatanchors,rec.audio.tubes,rec.antiques.radio+phono

Anyone figure out how to determine the appropriate settings for the
"bias", "shunt", and meter selection (A B C D) on a TV7 D/U tube tester
assuming you have a tube manual listing the relavent tube specs?
I realize setting the heater, grid, cathode, and such pin functions
is fairly easy given the tube pinout, but how to determine bias and
expected meter reading?

I realize I will need to make some sort of adaptor socket for
compactron tubes, 9 pin-ers easy, the 12 pin-ers I'll need to
be switchable to route the revalent signals to the section under test.

I'll look at the setting and specs of listed tubes to see if I can
figure out the calculations. Transconductance is most likely the
most revalent spec to look at. But if someone's already done this,
let me know. TIA.

Source record: 119817

Hi there!

I have some darkroom equipment which I would like to trade for a shortwave receiver. I am open to what you have, although I have a preference for a working tube receiver, covering from 541 khz - 30 mhz. Not really interested in anything really beat up or hacked up. Email me what you have if you're interested. I'll go with whatever appeals to me the most.. :) Even tho I prefer tube stuff (love Knight Kits and National SW-54), I also would love to lay my hands on a Sony ICF-2001...

What I have for trade:

I have a Durst M600 Enlarger with a 75 mm lens and universal negative carrier. Also have a Gra-Lab timer. The developing trays and tank go with the whole setup, too.. Heck, I'll even throw in a safe light bulb! Let me know what you have to offer, and maybe you can do your own pictures, and I can give your old radio a good home!

Thanks,
Ken Knapp, N3GBW

It used to 28 Years with one (possible) renewal for a total of 56 years. However, in 1986 th US became a signature to the berne convention which defines a term (for all new copyrights) to be the authors life plus 50 years.

Also, a copyright notice is no longer needed to insure a copyright. It used to be that if you published something without a notice, it was possible to loose the copyright. That's no longer true.

Check the copyright offices web site. They have alot of info there (and no, I don't have the address handy).

Good luck,

Wes

Source record: 119820
Cross-posted to:
rec.audio.tubes,rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.antiques.radio+phono

I think that this was one of Bogen's "booster amplifiers" for distributed sound systems. These systems used (and still use) a costant voltage scheme, where each speaker has a transformer with a 70 volt primary and a tappable secondary rated in watts, so you could adjust the output of each speaker for local conditions. A typical distributed system would be the hotel conference room with twenty 8" speakers in the ceiling. If you had this amplifier (we're assuming a pretty old hotel) you might have each speaker tapped at 5 watts (20x5=100). You might also tap the speakers closest to the microphone position at a lower wattage to lower their output and improve gain before feedback. I think the rule was the wattage was supposed to add up to no more than the rated output of the amp, but it could be less than the rated output without problem without problem.

Why not just replace it with another 5U4? They're still available. If you're trying to get some of the heat out of the cabinet, remove the tubes from the AM section. (I've done this with my GS 680). Somebody on rec.sudio.tubes will probably give you big bucks for that 6L6 modulator tube!

Yes someone has already done that. The person you want to contact is
Dan Nelson. He is one of the country's leading TV-7 gurus. He is at
DJN@indirect.com. You might want to think about giving him your
machine for calibration. Before I had done that I was throwing out a
lot of good tubes. He also sells the necessary adapters already made
up. He does great work at reasonable prices. Good luck.

4319. JOHNSON VIKING II -- any restoration hints?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-20 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5lsmtv$6t3@sf18.dseg.ti.com>
Source record: 119891

Okay, E.F.Johnson fans, this one's for you...

I picked up a Johnson Viking II this past weekend at a swap meet in Fort Worth. I couldn't resist it for $25. It appears complete, all tubes are in place, nothing is obviously burnt up or hacked up, etc. There is virtually no rust or corrosion on the metal parts either.

Does anyone have any restoration hints they could offer me on this? What are the typical weak spots, what part or parts always seem to need replacement (besides the filter caps, tubes, etc)? I've been told that the power and modulation transformers are weak spots, so I'll check them closely. Anything else?

I still need a manual for this rig. I've had several people tell me where I can BUY one (for as much or more than the rig cost me) and a few people offer to sell me a copy that they made, but I'd prefer to borrow one and copy it myself (using our fancy copier at work). If you'll loan me your manual, I'll pay the postage both ways, treat it with care and respect, and return it promptly.

{snip}

This isn't the answer you're looking for - but it is a very practical solution: Hit some of the many Ham fests and pick up a fairly recent tube tester - like a B&K 700 series (707 747, etc.). They can usually be found very cheap (since they don't do the real old tubes) - and they do a fine job on the newer stuff (compactron, nuvistor, etc.). I have both a TV-10 and a B&K 707 - they compliment each other nicely - and the time (and aggravation) you'll save can be put towards other projects...

best regards

The Ranger expects a high impedance unbalanced mic input. Mic input goes between pin 1 of the chassis connector and ground. Pin 2 on the mic connector will either be unwired or connect to a control line for PTT -- it IS NOT a mic signal lead.

Have a Hamarlund HQ105TRC with Mike and bag of XTALS... This unit is considered Rare by the receiver guide. It is a solid 8 with the clock. $175.00...Also have a Hamarlund HQ100 a solid 6 to7 Will need TLC...No Clock...$50.00 and last but the very sought after 200 Hamarlund Speaker Mint not a scratch on it $125.00..All items FOB Dallas Tx...Thanks
Bob K1JNN/5

4327. Knobs needed

Newsgroup: rec.radio.amateur.boatanchors

Does anyone have 2 black fluted knobs suitable for the driver and output controls on a Heathkit AT-1 xmtr? They don't have to be exact, but would like them similarly styled and sized. Some old test equipment knobs were like these. Thanks!

The ouput impedance will nominally be 144 ohms @ 100 watts and 120 volts output. It was probably meant to drive a 150 ohm line, with line to voice-coil transformers at each PA location.
To use as a modulator you would need to match the plate impedance of the amplifier you are modulating. As an example, if the transmitter ran 126 watts input and drew 180 Ma. at 700 VDC, the nominal plate impedance would be 3900 ohms. You would thus need a 150 ohm / 4K ohm transformer capable of handling at least 65 watts for 100% modulation.

What kind of Boatanchor should I get ?
Where can I get a Boatanchor ?
Epilog

Credit - Rick Stealey K2XT got rec.radio.amateur.boatanchors created
as an official newsgroup. The original boatanchors e-mail list was
created by Jim Lockwood KM6NK, and is currently managed by
Jack Hill W4KH -- its high signal-to-noise ratio should be
an inspiration.

Much of this FAQ was put together by John Brewer WB5OAU/4 for
the original boatanchors e-mail list. Other info has been gathered from
various sources by Michael Crestohl W1RC and Nick England KD4CPL.
A big Thank You to all who have contributed !

Disclaimer - While we believe this info is reasonably correct, all
responsibility for use of this info is yours, not ours.
BE CAREFUL - Boatanchors are heavy and contain lethal voltages !!

Why Boatanchors ?

Some may question the desire for 80 pound receivers and
100 pound transmitters, both with filaments sitting there
getting hot and wasting power in this day of microprocessor
based, mega-memoried miniaturized transceivers! Although
modern radios are extremely good at what they are designed
to do, they are about as interesting to operate as a
toaster oven. They have no soul.

Additionally, many find a zen-like feeling in taking an
old, misused ratty old radio and carefully restoring it
back to health. Like cars of the era, boatanchor radios
were made to be worked on, modified, and tinkered with.
Many think of it as Real Radio in this era where fixing
a transceiver is accomplished by boxing it up to send to
the manufacturer for a custom VLSI chip replacement.
Indeed, a warm soldering iron is almost a requirement
for operating a vintage station.

Others claim that boatanchors SOUND better than their
silicon descendents, and this is generally true. The
audio from a Hammarlund or National receiver, or a
Johnson transmitter can sound much better than the
300mW audio coming out of the 2" speaker in the
typical transceiver.

Watching the flicker of 807 modulators in a Viking I
as you speak into a D104 mic, is certainly more stirring
on a winter night than considering hole and electron
flow.

If truth be known, much, if not all of the above, although
true, are merely justification for the insatiable hunt
for more and more of these old boxes, simply because they
are just too NEAT to have and operate!

What are Boatanchors?

Big. Heavy. Old. Fun.
"Boatanchor" is a fond term for vintage tube-type ham radio and
communications gear. Manufacturers like Hallicrafters,
Hammarlund, National, Johnson, RME, Heath, Collins, etc.
made this gear roughly through the mid 1960's. Also included is
tube-type military radio gear, homebrew gear, station accessories
like microphones and keys, and test equipment of that period.

What is this newsgroup for?

The polite discussion of boatanchor related topics:

Restoration, Repair, Operation, Collecting, Historical info,
Parts sources, Legends and Lore, Vintage operations,
Vintage station accessories (keys, mikes, etc.)
Boatanchor ONLY buy/sell/swap

Who is welcome here ?

ANYONE interested in Boatanchors.
Hams, Non-hams, SWLs, military surplus fans, etc.
Newcomers, old-timers, thrill-seekers.
Men, Women, Boys, and Girls of all ages.
Commercial posters sticking to boatanchor topics

What is this newsgroup NOT for?

Newer equipment (use rec.radio.amateur.equipment)
Vintage broadcast and phono gear (use rec.antiques.radio+phono)
Vintage audio gear (use rec.audio.tubes)
Vintage solid-state gear (try the VSS list -
Send e-mail to listserv@fablotz.min.net.
Put "subscribe vss" in the message body)
Homebrewing with modern technology (use rec.radio.homebrew)
Non-boatanchor buy/sell/swap posts (use rec.radio.swap)
Antennas (use rec.radio.amateur.antennas)
General ham info (use rec.radio.amateur.misc)
Code vs No-Code (use rec.radio.amateur.policy)
Flames (use alt.flame)

Where can I find out more about Boatanchors?

Magazines

Book Summary - courtesy of Michael Crestohl, W1RC w1rc@amsat.org
---
1. RCA Receiving Tube Manuals. I have several editions in my library because older tubes were deleted and newer ones added between editions. I won't list all the tube manuals in my library but they are spaced out over three-four year intervals. The latest one I have is RC-25 which is dated 1966 and has 607 pages. Availability: Hamfests & shows $5.00 to $15.00

2. RCA Transmitting Tube Manual - 1962, 320 pages includes the lineup of transmitting tubes including the venerable 807, 6146, 811A, etc. Availability: scarcer than the Receiving Tube manuals but I've seen them around - $5 - 15.00

I believe both these manuals have been reprinted and are sold by AES in Tempe AZ.

While on the subject of tubes....

3. Tube Lore, Ludwell Sibley 1996 ISBN: 0-9654683-0-5 $19.95 available from author (Flemington NJ 08822). 186 pages. Excellent reference source on the subject written for collectors and vintage radio buffs. Features cross-reference on tube types and general essays on tubes.

4. Elements of Radio, (William) Marcus & (Abraham) Marcus. 3rd Ed. 1953 771 pages. Prentice-Hall Library of Congress Catalog No. 53-8544

A classic text that focuses on radio receiving theory. Very well written and presented. Good first text on BA technology. Availability: Should be easy to find at any vintage/antique radio show - $5 - $20.00

5. Radio Servicing - Theory and Practise, (Abraham) Marcus, 1954, 794 pages, Prentice-Hall. Library of Congress catalog number 53-9729. A good second text that follows on Elements of Radio. Quite thorough in its coverage. Availability: same as Elements of Radio.

6. Elements of Radio Servicing 2nd Ed. (William) Marcus and Levy, 1964, 566 pages. McGraw-Hill Library of Congress catalog number 54-9698. Its very interesting that the "other" Marcus collaborated with another author to write a similar book. As with Radio Servicing - Theory and Practise it is focused on radio receivers with emphasis on broadcast radio repair and troubleshooting. Availability: same as Elements of Radio.

Here are four US Army TMs that I think are really good for learning about Boatanchor technology: I found these to be of particular help when learning about this stuff back in the 1960s.

TM11-4000 - Troubleshooting and Repair of Radio Equipment. April 1958, 177 pages. R-390 enthusiasts will especially want to get this book if they can as it uses that receiver as the "sample", although not actually identified as such. As it was written for soldiers it is clearly presented and covers receivers and transmitters. One of my favorite texts.

TM11-662 - Basic Theory and Application of Electron Tubes. February 1952. 215 pages.

TM11-664 - Theory and Use of Electronic Test Equipment. February 1952. 158 pages. Covers meters, tube testers, signal generators, etc. One of the neat things I like about this book is it details the venerable mil surplus test gear like the URM-25D, TV-7(*) and other equipment of the era. Very important book for any BA fan.

TM11-665 - CW and AM Transmitters and Receivers, Spetember 1952, 274 pages. Another essential book to have. Title is self-explanatory. Another personal favorite.

On availability: These may be found for a few dollars at flea markets and vintage shows if you're very lucky. They are otherwise hard to find. I don't know if they are available through NTIS. I've seen them go for $15.00 to $20.00 a copy. They're well worth it.

There are other military TMs that teach DC, AC theory, antenna/propagation, power supplies, etc in this series but I have omitted them because they are really generic and not Boatanchor-specific. However, if the editor feels they should be included I will be glad to provide a description of them. The Navy also has an excellent set of manuals that accomplish the same purpose and are quite excellent as are all Navy technical manuals.

Finally, there's Fundamentals of Single Sideband published in 1959 by
Collins Radio Company. This book is quite technical and detailed on
the subject written by the engineers who designed and developed SSB.
There is not a picture of any of their amateur line in the book although
the theory certainly applies to any filter-generated SSB transmitter.
Its about 200 pages with lots of charts and diagrams. Availability is
very scarce and I've seen them priced from $50.00 and up. I believe there
was a reprint in the 1970s and these may be found at a much lower price.
The original is a large paperbound book with bright yellow covers.

The titles above only represent a portion of my radio library and I have
selected them as my favorite books of interest to Boatanchor enthusiasts.
I have several other titles from the 1940s and earlier but did not list these
as I do not feel they meet the criteria for this purpose, ie: the
technology is pre-BA and falls more into the realm of antique equioment.

Copyrighted 1997 by Michael Crestohl. Permission to reprint granted
provided credit is given.

Where do I find Boatanchors on the air ?

HF AM hangouts - 1885, 1995, 3885, 7295 KHz (East Coast of US)

How can I practice Safe Boatanchoring ?

This is a genuine concern! Boatanchors have Real Voltage
present in them! Lethal voltages. You will find that
capacitors really DO store charge! None of this wimpy
12 volt stuff!

Get back in the habit of discharging any capacitors that
are lurking under the hood. Keep one hand in your pocket
when working on a hot radio. Be REAL careful and THINK THINK

THINK before twiddling with a boatanchor that must be
powered up and worked on.

It is SO easy to get used to working on solid state equipment
and not worrying about Real Voltages... don't do this!

Also, many older radios are not fused... receivers are good
examples of these. I generally replace the line cord
(they usually need it anyway) and either put an in-line
fuseholder, or some of the Heath-type fused plugs in the
radio. Better still, replace the 2-wire plugs with a more
modern 3 wire plug. Barring that, ensure that you strap
every cabinet with healthy sized cable, to a common
station ground. This will prevent _you_ from becoming the
cable between two pieces of gear at different cabinet potentials.

Fires are nice to have burning on winter evenings
but not when they are on top of your operating desk.

Speaking of operating desks, you will become good at carpentry
if you spend much time as a boatanchor operator. You will
quickly discover that the table you used to operate your
tranceiver is way too small, and waaayyyy too wimpy to support
a growing boatanchor station!

How do I restore a Boatanchor ?

This subject could easily fill many pages.
There is a lot of really good info from Hank Van Cleef in the
rec.antique.radio+phono FAQ:

http://www.cis.ohio-state.edu/hypertext/
faq/usenet/antiques/radio+phono/faq/top.html
ftp://rtfm.mit.edu/pub/usenet/
rec.antiques.radio+phono/

Below are just some common topics.
The newsgroup is a good place to ask about other issues.
Remember the radio that stares at you from
your bench is old. There are not many around. Take that into
consideration as you proceed through the process. If you
erase the dial marking on your receiver by cleaning it
with Windex, you likely will not find another at Radio Shack.
Take your time and enjoy. The journey to a working boatanchor,
like life, is the _point_ not a process. You will say less
nasty words if you take your time.

Some general restoration tips:

* Check fuses before powerup. Many 'anchors will have the
wrong value fuse in it. Checking the fuse before purchase

is a good thing to do too. If it's open, you at least know
what you are getting into.

* Check the resistance from power line to chassis before
powerup. Most boatanchors have bypass capacitors from the AC lines to
chassis and these sometime have deteriorated. Replace with caps made
for AC line bypass applications (available from Digi-Key, etc.)

* Power up old radios gently. Plugging it into the wall and
turning it on is not gentle! Bringing it up slowly to operating
voltage with a Variac so that electrolytics can "form"
is gentle.

* Don't trust that the tubes that are in the sockets are the
correct tubes. Check them against the schematic. If you
don't have a manual (and even if you do) note which socket
the tube came from so that you can replace them correctly.

* Don't clean tubes with water. The marking on the glass
will likely come off with one good swipe of a water dampened
cloth.

* Assume many electrolytic and paper caps are bad. Check them.
Paper caps should read "infinite" ohms on your ohmmeter.
Electrolytics should read a very high value after settling.
Paralleling a known good electrolytic is often a good way to
check an electrolytic.

* Check high resistance, and high wattage resistors for
correct value.

* Nifty tools to have are flux brushes, for cleaning nooks
and crannys. Windex is nice for cleaning chassis.
Qtips are good to have too.

* NEVER clean dial markers or drums. If you do, assume that
they will wipe away never to be seen again. You WILL say
bad words if this happens!

* WD40 or Scotts Liquid Gold (my favorite) applied to a clean
wrinkle finish will do a great job of restoring the lustre.
Works well for knobs too!

* Never use WD40 or Scotts Liquid Gold on anything until you
have tried it on a non-visible part of the cabinet to make
sure it won't dissolve anything.

* It is a poor job that doesn't require at least one new tool !
From Ed Zeanski-
- adjustable knurl wrench for removing knurled toggle switch
nuts -
Techni-Tool Phone 215-825-4990
5 Apollo Rd, Box368 sales 941-2400
Plymouth Meeting, PA fax 828-5623

19462

These folks listed 2 adjustable knurl wrenches, 1/2" and 5/8",
for $13.20 ea. My catalog is a year old so the price might
have changed. The collet in each allows 1/16 adj to allow for
finish thickness. Brand is listed as "Knurl-Tite",
stock# 388WR014 for the 1/2" and #388WR016 for the 5/8".

Aren't tubes and parts impossible to find ?

Nope - there are lots of tube dealers attending hamfests and
antique radio swap meets, and selling via mail order. Besides,
there are lots of 50 year old tubes out there working just
fine.

Fortunately, hams are notorious packrats and parts suprisingly
abound, for old gear, particularly at hamfests (and in the
boxes under the table as mentioned earlier). Word of mouth
once again will work wonders at getting tubes, high voltage
caps, and the like shoved in your direction. Beware that this
is an addiction, and boatanchor radios, parts, and periodicals
will soon overrun all available space. Trust me.

Where can I get tubes and other parts?

What type of Boatanchor should I get?

This is a question that has as many answers as there are
individuals. Generally, as a "starter" boatanchor, 50's
vintage gear is probably the best way to go. Radios in
this era are quite desirable, but often times won't require
extensive surgery to get repaired and on the air.
A radio from a well-known manufacturer is also a good
choice... for receivers, look for Collins, Hammarlund,
Hallicrafters, and National are all good radios. In the
transmitter space, Collins, E.F. Johnson, and Heathkit (with
certain reservations) will do well.

Transmitters with plate modulated AM are the more desirable
units. Prices will generally reflect this.

Good "starter" transmitters include, but are not limited to:

Johnson: Ranger I or II/Viking I or II/ Valiant/500
Collins: Any 32V series.
Heath: Apache, DX100A or B
(my AM bias is showing!)

"starter" receivers include:

National 183/183D, HRO60 and MANY others
Hallicrafters: Many SX series.
Hammarlund: HQ129, HQ150/160/170/180, Super Pro series, many
others.
Collins: any 75A series.

By "starter" radio, I do not mean to indicate the cheapest! Most
of these radios would also be on the "best" list. I selected
these as they _are_ some of the best, and when one is starting
anything, it is good to get the BEST stuff available, rather
than getting junk and getting discouraged with it. There will
be enough to learn (or remember!) without having to compensate
for marginal equipment (was that 'Peak the plate and dip the
grid, or the other way around??')! Any radio from this list
will do the job for some time, and make operating a pleasure.

Where can I find Boatanchors for sale?

The best way to find a boatanchor is to let other hams in
your area know you are interested in them. Often times
I have been given a boatanchor, because the former owner
has relegated it to the garage or basement. This is also
the cheapest method. When attending a hamfest, ask some
of the sellers if they have any for sale. Often times
sellers won't bring such stuff, as it is HEAVY and is
perceived as not being sellable. Look under the tables,

and in the back of the sellers displays for them! While
you are under the tables rummage thru the boxes of parts
found under there for parts that will come in handy restoring
your new-old treasure. Tubes, high voltage caps, vintage
microphones and connectors may be found lurking here!

If you are in a hurry (and have money) ads in Electric
Radio magazine, the Ham Trader Yellow Sheets,
or your local packet BBS are good places to look. Expect to
pay more through these outlets. Also expect to become an
expert in UPS shipping rules. Boatanchors are heavy, and
often the cost of shipping one can exceed the cost of the
entire unit.

EPILOG

Don't look as boatanchors as an investment. Get a really grimy
specimen and clean and fix it, and coax it back to life. Turn
it on with the rest of the room lights turned off. As it warms
up look into the insides and see the orange glow from the filaments
and the purple fire from the 866's. Watch the giant S-meter
come to life, and the dials emit that soft light, framed
by your carefully cleaned and waxed cabinet. Rotate the
knobs that are of sufficient size and layout to permit
easy, flywheel smooth adjustment.

Maybe tune to the BBC on your NC-183.... watch the S-meter
climb as the full audio comes out from the 6 watt output stage
as you crank back the RF gain. Fiddle with a few more knobs
(boatanchor operation does not need to be a passive experience)
to get it set just the way you want it.

Then you'll know why boatanchors are such pleasent
things to own. Like mine, your transceiver may become a
very expensive frequency counter and RF generator used
to align the 'Real Radios'.

4331. FS: 211 tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-21 00:00:00 UTC
From: Michael Feldt <feldtm@iquest.net>
Message-ID: <01bc659b$346e2060$cfec35ce@feldtm.iquest.net>
Source record: 119753
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

I have a pair of used 211 triode tubes for sale. Both are RCA and one is dated 1942. The filaments are good and there is no visible carbonization inside the glass envelopes or wear on the plates. They look as though they have been used very little but I have no means to really test them. Both tubes come with unused Johnson 211 ceramic tube sockets. $75 each which includes shipping within the 48 states.

4332. item of interest to Collins Collectors?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-21 00:00:00 UTC
From: dhrnsn@ptd.net
Message-ID: <5ltjie$c2$1@news.ptd.net>
Source record: 119821

I found something today many of you may be interested
in. I routinely stop by my local amateur radio dealer,
just to see what goodies he has on consignment - today
I found the following:

- "Type CMX-47205 Antenna Loading Coil", Navy Department,
Bureau of Ships - Unit of Model TCS-12 Radio Equipment -
Collins Radio - contract # nxsr-36727

It appears to be in very good condition, although you can
tell the cabinet was repainted. Of all the hamfests I've
been to, I've never seen one of these before (maybe I wasn't
looking close enough!) - it's about the size of a small
toaster. I think he was asking $50.00 but you can usually
haggle a little with the owner of the shop.

- The other radio I noticed (not so rare), was a really nice
looking/clean Heathkit HW-101, with power supply and matching
speaker + extra set of tubes + a D-104 microphone. It had a
sticker asking $225, but he told me he'd take $200, maybe less.

His name is Tom, at 800-891-9199 - (usual disclaimer applies,
I'm not related, no financial interest, etc.)

I am looking for information regarding a Collins receiver,
90 to 10700 Mcs, military numbers AN/BLR-1 and AN/SLR-2
It is a countermeasure receiver for use in a Sub or a Surface Navy
vessel. It is made out of lots of 19" rack size module.

PP-312 Power supply.
IP-10 Indicaror control.
CY-69 and CY-70 Mixer amplifiers
TN-135 to TN-142 RF tuners
R-120, R122 and R-129 Coms units

Information on how, when and where it was used is welcomed. Also a
module interconnection digram would be nice to have or a pointer where
to find this information

Thanks,

Nico van Dongen / PA3ESA

Yikes!
What makes you think he wants to disable the A.M. section?
The novelty of occasionally using the A.M. mode on 75 meters, etc
is why most people obtain these transmitters.

From: markem@primenet.com
Message-ID: <5m0ec8$ir0$1@nntp02.primenet.com>
Source record: 119844

Just FWIW...

I took a box to UPS today to ship out and found a sign outside that said to not seal up boxes, that they are checking the packing job before accepting them. If you have it sealed already, they will open them. Sure enough, the friendly lady at the counter opened up the box and checked it out. I guess it passed since she sealed it back up, I paid the $10.45 for shipping, and it went on its way. It was a 312B-4 carefully wrapped in a huge wad of bubble wrap and surrounded by foam peanuts. She didn't unwrap the bubble wrap, thankfully, just felt around in the box. No big deal, just kind of surprising. They started it in late March. This was at the UPS depot in Tempe, AZ. I don't know if it's a UPS policy everywhere.

I've never had any problem with UPS, so no axe to grind. Just letting folks know so that it might save them wasting time & tape. They don't charge for the tape, BTW.

One other thing I do is in the Package Contents box on the form, I always write exactly what it is I'm shipping, i.e. "Collins 312B-4 Station Console". She looked at that and just shrugged...no questions about it. Then again, I guess they get some pretty wierd stuff.

I have for sale a Hallicrafters SX-100 General Coverage Shortwave
receiver.
It is very clean and is working good. Cosmetically I would rate it a 9 on
a scale of 1 to 10. There are a few miner scratches on the top. It has all
the
original knobs and the s-meter face is excellant. I am asking $200 for
the set plus shipping.
Contact me via e-mail or by phone at 508-392-9943

>I'll report my findings...
>
>Mark

Then I thought about it some more and realized what a stoopid question that was. Of course they'll float. A vacuum makes them have even less mass. I even tried it...the 12BY7 floated just fine, although a little pin down. A tube with a heavy metal or ceramic base might not, tho. Guess it would depend.

And no, the wife didn't see me try it...

Mark

It is the displacement of water that makes them float. If the weight of
the water they displace is more than the weigh of the tube, they will
float, the vacuum inside makes no difference.

4382. TRADE -- FT-243 and similar xtals, 80/40/30/20m freqs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-23 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5m44g8$7lr@sf18.dseg.ti.com>
Source record: 119698
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have the following crystals FOR TRADE ONLY:

FT-243 holders: (these are FUNDAMENTAL crystals, not overtone!)

7156, 10105, 10130, 10140, 14060, 14125

Note that the 14060 is NOT a 7030 crystal doubled!!!!!

Fit FT-243 sockets, but larger holders similar to CR-1A:

1810, 1812, 1815, 1817, 1820, 1845, 1860, 1870, 1990

3/4" pin spacing, larger pins than FT-243 (like CR-1A pins):

3560, 7038.88

I will TRADE these crystals, one-for-one, for FT-243 and similar
crystals on 80m and 40m CW frequencies (3500-3725 and 7000-7150).
I will NOT sell them! They came from an estate, and I promised
the executor that I would not re-sell them, only trade them, and
I intend to keep that promise.

73,
Dean K5DH

Some of the old aircraft HF used low if frequencies. Also the
RCA FRR/MRR/SRR series had a 200 KHz IF with a 3 KHz mechanical
filter.

I have an old National NC-188 I would like to modify, and tune up.

1st does any one have the alignment procedures for this radio? I have a scematic but no alignment instructions.

2nd I would like to add a BFO and a product detector for ssb reception. I would like to use tubes for this, I am looking for a simple circuit diagram to work from.

Also I am looking for a copy of the 1957 ARRL handbook. If any one has one in fair condiction let me know what you would want for it.

thanks

Source record: 119780

In article <19970519143800.KAA29628@ladder02.news.aol.com>, ho4bart@aol.com says... (dated 19 May 1997 10:38:41 GMT)
>
>copyright unless renewed is 28 years, is it not?

>most afficionados today are into retaining it in
>original condition. a lot of the "first remove all
>parts, then saw along line A-B" type instructions"
>just don't appeal to surplus fans anymore.
>hue miller

I didn't know about copyrights, that's why I am asking. How, for instance, would I go about finding out if they HAVE renewed the copyrights?

I'm not going to publish these things, I'm trying to figure out a way to SHARE them with others who might want to do things like find a schematic or convert one. Not all folks are bound by the "do no harm" credo to a surplus gem. I haven't converted an ARC-5 RX in years, but the last one I did, I surely moved things around. Never did do the saw the ARC-5 transmitter to make a VFO trick, but thought it was certainly worthwhile.

4402. BAs used as true boatanchors

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-23 00:00:00 UTC
From: boeing377@aol.com
Message-ID: <19970523011400.VAA18872@ladder02.news.aol.com>
Source record: 119781

My father was a commercial fisherman and kept his boat at Fisherman's Wharf SF CA. When 2-3 Mc AM radios were outlawed, some were put to use as counterweights on the mooring lines that keep the boats in place as the tides rise and fall. The tubes (6V6 6L6 807) etc were often stripped out first as they were usually bouyant. When Loran A signals disappeared, APN 9 APN 4 and their associated rotary inverters were put to similar uses as counterweights. I once "rescued" a mint PE 109 (rare 14 VDC to 115 VAC 400 cps rotary inverter) from this fate just before it was about to be submerged. I offered to substitute an old rusty cylinder head which was considered an acceptable trade.

4405. For Sale List

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-23 00:00:00 UTC
From: nuvistor@aol.com
Message-ID: <19970523024100.WAA25585@ladder02.news.aol.com>
Source record: 119784

I currently have for sale several shortwave receivers of the following types:
1- R390A
1- R392
2- AN/GRR-5 one with the power supply and case,one without
I also have quite a bit of Korean War vintage FM equipment covering from 20Mhz to 58Mhz.(Power supplies, receivers, receiver-transmitters, re-transmission units, vehicular mounts etc. for various GRC, VRC, and VRQ configurations. Let me know what you want.
I also have some very new, very pristine examples of some Israeli tactical manpack sets very similar to the U.S. PRC-77. These units are functionally identical exept for a narrower channel spacing of only 25kHz.

If anyone is interested please e-mail to nuvistor@aol.com
I would be interested in trading these items for 2M and 70cm equipment multimode radios, antennas and such. Tell me what you have and I'll tell you what I have.
Here's a mostly complete list of the other stuff I still have.

RT-68 38-54.9Mhz 2W lo 18W hi cont. tuneable $65
RT-67 28-38.9 " " " " "
$65
RT-66 20-28.9 " " " " "
$65

PP-112 power supply 24VDC p.s. for above xceivers. Supplies all operating voltages from 24vdc 6.5A input $15

PP-1175A 115vac power supply for above xceivers. Supplies all voltages
req.byRT units as well as auxiliary 6.3vdc & 135vdc out. $85

R-110 receiver 38-54.9Mhz cont.tuneable receiver w/squelch $45
R-109 " 27-38.9Mhz " " " "
$45
R-108 " 20-28.9Mhz " " " "
$45

PP-282 power supply for above receivers(mounts internally) $15

PRC-10 backpack tranceiver .9W 38-54.9mhz tuneable $45
PRC-9 " " " 27-38.9mhz "
$45
PRC-8 " " " 20-27.9mhz "
$45
also the Canadian versions of the backpack radios as well as the

American "A" models
PRC-6 Walkie talkie 275mW single channel crystal controlled
as well as the 6 channel Canadian version US
$22.50

Can. $20
also have the channel Alignment Indicators for them if needed

Now for the new stuff. These radios are the functional equivalent of an
American
PRC-77 The frequency range is from 30mhz to 75.975mhz in two bands with
the provision for two mechanical preset freqs.They work with a sub-audible
tone squelch and depending on the individual radio they have a power out
of
1.1W to 2.25W The only functional difference from these radios is the
channel spacing.American units have 50kc spacing, where as these units
have 25kc.
They are made by Tadiran of Israel and are of current manufacture.
The Korean war stuff Iwould call "good condition" (totally complete not
abused
but not operationally checked)wheras the new stuff I'd call "very good to
exellent" (I use the stuff and it works well)

If you need more info or are interested in any of this just let me know.
Maybe we could trade something, who knows...

73
Chris

Just a thought if ss replacement is persued.... The working voltage across the filter caps will go up due the difference in dynamic resistance of tubes vs silicon diodes. Make sure the filter caps can handle the increase or smoke and stench will follow.

75A3, no cabinet, panel has been touched up around rack holes (with St. James gray), KC dial has slight discoloration from dial lamp, otherwise very good mechanically. Electrically excellent, PTO tracks within 1kHz. $300 shipping included. Thanks, John, KU6X

4422. FS: Galaxy GT-550

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-24 00:00:00 UTC
From: petef@sprynet.com
Message-ID: <33863037.14011006@news.interserv.com>
Source record: 119716
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I'll never get to this one (new job, no time, no money):

For Sale: Galaxy GT-550 transceiver, SC-550 speaker console and
AC-400 AC supply.

I had another years ago and really liked it, nice audio considering
2.1KC filter, and just a nice tuning, stable, and easy handling rig.

Runs 550 watts SSB input 80-10 with switchable sidebands designed for
SSB and CW only. Includes a "taut band" S-meter/plate meter. Good rig
for anyone who appreciates the Galaxy philosophy of clever design for
maximum bang for the buck.

Front panel appearance is good, with one or two very minor scratches.
Af gain control knob is wrong but reasonable looking. Power on/off
toggle switch neatly inserted into drilled hole centered above the
rf/af gain control (haven't these people ever heard of line cord
switches?). Paint coming off both black cabinets and a repaint would
be simple and a good idea. Main tuning and plate tune knob trim
inserts are scratched, may be amenable to Dremel-polishing.

Electrically the set receives and transmits but there are two probably
related problems - low power output (about 20 watts) and the 12 vdc is
up around 20 volts. Once I discovered this I stopped playing with it.
However, receive seemed OK sensitivity wise and the transmit fidelity
seemed fine. Off resonance the finals tubes draw plenty of current so
they may well be good.

Price $125 includes manual with detailed troubleshooting info. I'll be
happy to securely box it up for shipping if needed, you pay shipping
by whatever method you like. COD acceptable.

73 es tnx,
-Pete

Well Chuck... ONE of us certainly doesn't. It's a simple subject: To Build... Or Not To Build... with a simple enough answer.

IF your museum (personal or public) is dedicated to Electronics Technology, and the subject and ideas you wish to illustrate involve the ingenuity and resourcefulness exemplified by the several kit manufacturers over the years... fine. More power to you. Of course, your 'message' of appreciation and enlightenment will be limited to yourself and your friends (private display)... or whomever you can persuade to visit your museum (not counting the very real possibility of the rare, limited, illustrated visit in a magazine.)

IF, on the other hand, your plan is to convey the joy you have found in building and operating your kit, the world is at your doorstep. "Ordinary'" old ham radio gives you the chance to illustrate to hundreds of other hams annually what your old-but-viable boatanchor can really do. The photons in their mysterious paths to other antennas don't care. The ears at the other end don't even know-until you tell them. An unbuilt kit cannot do this.

So what is our measure of the inherent value of all this? Is there some magical or awsomely reverent quality about an unbuilt kit? How about a built kit? The unbuilt kit's value is either literal (e.g. speculative $$$) or lies within the appreciation of all the matters associated with its existence in the first place. All the design efforts, all the work of defining it as a kit, and finding the parts, and putting the package together-still as a kit. All those things are worthy of appreciation. Are they any less worthy in a built kit? I think not. All those same efforts are still present. Furthermore they are complimented by the efforts of the builder in bringing the kit

into what its designers intended all along: operation.

Talk about not getting the point Chuck: THAT was the point to start with, it is the point while being built, and it is the point when operated. What point in pride of ownership of a box of parts? Methinks it eventually relates to the cash value... and little else.

What memories... My parents used to hang out on 50.4 Mc. (as it was known in those days) back when I was a kid (about 35 years ago +/-). Used to tell a story about hearing a KA6 one night...back when that was the prefix for American forces in Japan...too late (the band crapped out) they realized what they were listening to...:(

Message-ID: <19970524122600.IAA17811@ladder01.news.aol.com>
Source record: 119727

I have the following NOS tubes.

2 National NL-740P $15/ea
1 GE 5558/FG32 $12/ea.
4 National NL5559/FG57 $15/ea.
1 GE 5559/FG57 $15/ea.
2 National NL5559/BT5B $20/ea.
2 National NL604L/7015 $25/ea.
4 National NL615/7018 $20/ea.
2 National NL710/6011 $25/ea
4 National NL5558/FG32 $12/ea.
2 National ELC3J $25/ea
1 Cetron 5557/FG17 $17/ea.
1 Cetron 3B28 $10/ea.

These all seem to list for $30 and up in the AES catalog, but I will sell the whole lot cheap, if someone makes a decent offer.

Thanks,

Dave

Surely a valve, tube to you lot :-), should float even better than if it
was full of air. What matters is the weight of the displaced volume
against the equivalent weight of water. Air would weigh even more than
a vacuum.

Cheers

RObin

PS, you wait until the XYL comes home and finds the complete front
panel, knobs and all valves from a comms receiver in the sink. I bought
it from a guy who had kept in for years in a garage and it was full of
dust, dead flies, spiders and this seemed the bast way of getting every
thing clean.

The kitchen ceiling now needs replastering from the dent she put in it.
Still can't see why :-).

When I was VE3DPD in Canada (where else!) I got a Collins KWM2 for a
song, as it did not work...It was BROWN...and Collins were always Grey!
So I took all the tubes (Valves) out...washed them...put the KWM2 into
the sink with a lot of DishWashing liquid...after 15 Minutes...swished
it around...all the Nick O Teen came off...into the oven at a low Temp
for 20 Minutes...it came out immaculate!

The PSU...out came the Transformer & Choke...into a bath...washed the
Xformer & choke on the outside...dried the PSU...put it all back again..
AND IT WORKED!!!!!!!!!

Kept it till I came back to the UK in 1989....wish I had brought it with
me!!! It worked very well.................

If only..............

For Sale:

Two R1230/FLR receivers with matching central power
supply system (Power Supply will handle 6 receivers)
and time base. 2-32 Mhz synt receiver, mechanical
digital readout. Excellent condition, no corrosion. One
interconnect power cable (easy to duplicate for second receiver.
Receiver output is 60Khz IF. See Frank Osterman's "Shorwave
Receivers--Past and Present" for picture and misc data. I do
not have any documents on these units. The power supply is very
heavy, the receivers are about the same size as the R-1051 but a
bit heavier. The interiors of the receivers look like a Rolex watch.

$700 obo for the pile which includes a Rycom seletive voltmeter to be
used as an IF system. Prefer pickup, but will ship UPS in four boxes.
email for shipping details.

I disagree Bill, IMO if the tube is filled with air instead of having a vacuum inside then the tube will weigh more and will only float if the tube's weight is *still under* the weight of the water it displaces...kinda picky I know but I think I'm right...

In sorta the same vein, ever hear of the ball of lead in the rowboat in the pool?... you proceed to the pool's edge and carefull mark the water level on the pool side, chuck the solid lead ball overboard, then recheck the waterlevel mark, where is it?, above, at or below the original?...

Hello all -and- I'm back.

I had a great time at Dayton, spoke at the "Ham Radio and the Internet" talk and [still] got invited back next year. (I guess this is good?)

I enjoyed meeting so many BA'ers there. (I'll have some photo's in a week or so.)

New Boatanchor info on my web page:

1). Al Klase, N3FRQ gave a great talk at the April NJARC meeting demonstrating his complete B-17 Radio Command Set, set-up. There are four photos. (Too bad you can't hear those dynamotors whine).

2). A couple of months back I picked up a "Chopper" in a BA net auction. I have found the documentation, schematic and other info for it; and put it on the web page for all to see. (I'll have a photo in a couple of weeks.)

3). The B-i-g Radio Auction, in April in Downingtown, PA, photo's are finally up. You can see them by going to the Auction Results page and clicking on the photo links. There are about 6 or 7 photos.

go to: http://www.eht.com/oldradio
or try: http://www.cyberhost5.com/eht/oldradio

if you are using a very old browser.

Some of the older Alpha amps make wonderful
boatanchors...:-)

You're invited to "See The Quality, Feel The Power"
of the latest Alpha Linear amplifiers at Alpha's
new web site:

http://www.alpha-power-inc.com

For additional information about Alpha amps,
please contact Scott Ehrhorn at:

Tel: (970) 535-4173
Fax: (970) 535-0281
Email: sales@alpha-power-inc.com

Alpha/Power was founded more than a quarter century
ago as ETO (Ehrhorn Technological Operations) to
design and manufacture the best possible maximum-
legal-power, continuous heavy duty, HF linear
amplifier for radio amateurs.

Alpha/Power (ETO) amplifiers contributed to the
expressions brick-on-the-key, maximum legal-power
and all modes, no time limit to the lexicon of
amateur radio. They pioneered the no-compromise
desk top amplifier, hands-off no-tune-up operation,
full break-in (QSK), standard 160 mater coverage,
and microprocessor-controlled automatic bandswitching,
tuneup and remote control.

Alpha/Power (ETO) also has pioneered realistic buyer
protection with long term limited warranties (never
prorated and now an unequaled four years), and the
money-back guarantee.

Please respond directly to Alpha, NOT to me. Thanks.

I hope the contest rules prohibit the profane and ridiculous language promulgated by Tom - WA1HLR and his group of idiot wanna-be Tims. The AM window in the Northeast has become a disgrace to amateur radio, AM operation and human nature in general. These are the same people who proclaim the benefits of AM to be a "clear voice" mode making it nice and easy to listen to and then they use it to emit verbal effluent, immature and disgraceful language driving away many of the old timers, people with kids in the shack and many others with a decent set of sensibilites. WHen is AM International Electric Radio going to take some leadership and actively discourage this garbage.

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec etc.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

For sale a Heathkit DX100B 160 thru 10 in nice shape, cabinet may have been repainted but its a very nice job, clean inside and out, not tested on air. National NC183D, works, cabinet is below average lots of scratches, original knobs, good face and dials, probably could use an alignment and some new tubes. the pair picked up in Tulsa OK, closest offer to $500.00.

Source record: 119672

I am selling my Collins 561S-1 receiver. This is a late model with the LED frequency readout.
The radio is pristine, original condition, no mods.
I had new USB and LSB Collins filters installed, the steel version, as the old (plastic case) filters had too much insertion loss.
It comes with the original manual (no copy), an original memory backup battery that plugs in the back,
a spare RF module, and a spare front panel and switches that I once found at a ham fest

I also have the 19" rack & original speaker for it

I am asking $900 + shipping

Please respond to A0927429@dsbmail.itg.ti.com

Hello All, I had posted this a couple of weeks ago and got a number of replys. The deal I thought I had fell through, so here is the posting again. You can see a picture of most of the equipment (and me too) on the cover of 73 Amateur Radio Today magaizine, September 1996.

All equipment is good to very good conditon, and all is working FB. All goes as a package only ...

SB-102 Transciever w/ 400 Hz CW filter
SB-600 SPEAKER
SB-610 MONITOR SCOPE
SB-620 SPECTRUM ANYLIZER SCOPE
SB-630 STATION CONSOLE
SB-640 REMOTE (LMO) VFO
SB-650 FREQ DISPLAY
HM-102 WATT METER
HD-3030 RTTY TU UNIT
HD-3006 RTTY 'CROSS-FIRE' TUNER
HD-1481 REMOTE COAX SWITCH
HP-23B POWER SUPPLY
HP-13B MOBILE POWER SUPPLY (NEVER TIRED THIS ONE OUT)
SBA-100-1 MOBILE MOUTING UNIT

QTH is Western New York, and would prefer pickup, so as to demo and save on shipping costs and hassels. Will ship however, if interested. Asking $650.00 U.S. (plus any shipping) as a complete package. If interested please contact Shane, WB2WPM, sbrady@pce.net. Or evenings (EST) at (716) 675-5797 ...

73, Shane WB2WPM

I've had this happen twice over the past few weeks. The rep at our local UPS told me they would start doing that mostly with electronic items like radios and TVs which are not being shipped in their original cartons. I guess they've had one too many damage claims.

Mostly they seem to just open the package and poke around the sides. They seem to only be concerned with MAJOR packing problems. Also, if they refuse your package you can always take it over to US Mail. IMHO no big deal... just longer lines.

SP

I have a Hammarlund HQ129-X in operating condition for sale for $95. No extra holes in the cabinet or chassis. The cabinet is pretty good, and the chassis is clean. Main tuning and bandspread dials are in good condition. Some of the knobs are not original, and the front panel has some heavy wear marks and scratches in it. However, it plays well. Will possibly trade for something of interest. 73, George. N0GH

P = I * V.

From Ohm's law, I = V / R. Substituting to get P in terms of V and R,
gives

P = V**2 / R.

Multiplying both sides by R / P,

R = V**2 / P.

Plugging in the numbers, R = 120 * 120 / 100 = 144 ohms.

> Can someone help me figure out what the impedance transformation ratio
> of such a transformer might be?

It is easily derived if you don't remember it.
See above formula, P = V**2 / Z

Ppri = (Vpri)**2 / Zpri ; Psec = (Vsec)**2 / Zsec.

Energy is conserved, power is energy per unit time, so the power in the
secondary is equal to the power in the primary. Therefore,

(Vpri)**2 / Zpri = (Vsec)**2 / Zsec.

Multiplying both sides by Zpri / (Vsec)**2 to rearrange, gives

(Vpri)**2 / (Vsec)**2 = Zpri / Z sec.

Taking the division inside the exponentiation,

Zpri / Zsec = (Vpri / Vsec)**2

Or in words, the impedance transformation ratio is the square of the
voltage transformation ratio.

Hope that this helps.

Hit me with a wet noodle. I blew the 1N3487 diodes in my Hallicrafters PS-150-120 power supply for the HT-44. Looking for a bad ripple problem and accidently shorted the B+.

Can somone please tell me where I can obtain 1N3487 or recommend an equivalent. If anyone has 4 of these I would be more than happy to pay for them and the shipping.

Destitute.

Hi gang,
I have for sale a 2 meter Yaesu FT-290 multimode (CW\SSB\FM) rig.
Clean, but a few minor scratches, with mobile mount, hand mike,
separate Ni-Cad battery pack and Ni-Cad charger. Includes manual.
$500.00 shipped to lower 48.

I am a non-smoker, and this rig was never used mobile, only in my
home shack. The reason I'm sellin it (also sold FT-690, and FT-790) is
because I have replaced these with a new Yaesu FT-736 last December, and haven't used these rigs
more than 2 or 3 times since.

The 1N3487 is a little bit of an oddball since its reverse voltage rating is 1200 volts.
The forward current is rated at 400 mA. If the voltage to the diodes is such that more common 1000 PIV diodes will work, use the common 1N4007 diode. To be extra careful, replace each 1N3487 with two 1N4007 diodes in series - thus giving a higher safety factor. At typically less than a dime each, the extra 40 cents is well worth it.
The 1N4007 is rated at 1 amp forward current and 1000 PIV.

For Sale: Antique Hickok DC Milliameter

Model 14, Series 2. Dated 10-1-1952.

This meter is a heavy duty unit and was used as a portable measurement "standard".

Meter is in excellent original condition and works fine.

Meter case is made of very heavy duty phenolic material and is 7" wide, 6" high, and 3.5" deep. There are 7 terminals along the top of the case and are marked: (1, 5, 20, 50, 200, 1,000, & "+") The meter has a swinging door to protect the meter's face when transporting. On the inside of the swinging door is the paper specification sheet.

I am happy to answer any questions about this meter.

Asking $30.00 + actual shipping costs.

Source record: 119626

Twenty-five years ago a company called Data Engineering, Inc., in Springfield, VA, was selling what was touted as being the latest and greatest in morse keyers, their Space-Matic 21. This was long before memories and such, but it was iambic and had separate weight, speed and sidetone controls.

I have one that is practically new, S/N 58. It was used for about two months and then packed away and never unpacked until yesterday. Any ideas what such a beastie would be worth today?

On a related subject, does anyone have an original manual for this keyer?

Enough for now, y'all have a nice week. Mercifully, it's a short one. :)

Funkschau magazine celebrated in 1983 the 50 years anniversary of RV12P2000, but the valve came in use first in 1938-39(?), while NF6 are earlier - this is an early version of RV12P2000. My Torn.Fu.b1 from 1935 with Kaiser symbol (not the nazi which was used always after) uses RV2P800, and marine SE...... used it as well from about this date. Inner RV2P800 glass tube is almost like RV12P2000.

Wonder if RV2,4P701 were used in some extent? And what was RV12P3000 used for? (I have one of the latter, but could not find any references)

gary.sarra@snet.net writes:

>Wonder if anyone can give me info on a tube I picked up awhile back.
>It is Telefunken and the part number is RL12P35. It looks like a
>transmitting tube to me, but only guessing.

Yes, it is a transmitting tube. It was very popular in ham transmitters,
in Germany, up to the early 70s. There are some civil copies of this
tube, but nothing is like a RL12P35. Like some other nazi tubes, this
one is also designed to be g3 modulated. Like most other nazi tubes,
this one has also a very unique base and requires a special socket.
Like many other nazi tubes, this one is also designed to be an "universal"
tube, i.e. it is intended to be used in many configurations. There
are data for a triode mode with g1 and g2 connected together. This
tube was designed by the universal elctronics supplier of the nazi
empire: Telefunken. If you need comprehensive data, I can supply it
on request.

>Only other markings say "Kriegsmarine" and a series of numerics.

It comes from a navy stock.

>I tried to find info from the Wumpus page but no luck.

I'm surprised.

Hello:

I have 8 New in the box E.F. Johnson Tube Sockets for Sale. These are Original New Old Stock sockets that are brand spanking new ...even the boxes are in great shape. Model # of these sockets is 123-211. They have White Ceramic Bases with metal Chimneys. They are made to hold 4 Pin transmitting tubes like the 211 and 845 and 800 series tubes.They are real nice!!!

PRICE is $25.00 USA Each plus shipping.

These would be great for someone building a homebrew amplifier....and are also nice for displaying old tubes in your collection.

These are hard to find in used condition....let alone new in the box!!

Please email me direct at..... radiorob@serix.com to reserve .

Thanks...73...ROB.

Note that the price of the CD-ROM has dropped significantly - I believe
RADIO DEVICES sells it for around $30.00.

Both are useful - but if you don't want to shell out $$$ for an original
all the info is available on the CD.

Its a great reference source for both tube-based audio and rf information.
I know of none better.

4542. ===<COLLINS>=== radio's for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-27 00:00:00 UTC
From: Joe BV/N0IAT <joentam@transend.com.tw>
Message-ID: <338ADAEC.3A59@transend.com.tw>
Source record: 119639
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Hi,
I have the following Collins Winged Emblem gear for sale. All
equipment is in working/daily operating condition. I am selling
my boatanchor gear -- the Drake lines went at Dayton, now the
Collins lines are going too. Reason for sale--- I hope to buy
a new Ten Tec Omni 6-plus and a Hercules Amplifier.

1. S-1 Line (75S1/32S1) with 516F2 Power Supply. Condition is
CCA very good. No mods to the rx or tx. Power supply has a
slight dent in the back of the cabinet -- otherwise fine. 100%
electrically. RX has no CW filter. Photocopies of manuals.
This is an ideal Collins "starter" S-line. The cosmetic
condition is quite good, and looks impressive all lined up on
the operating desk.

2. S-3 Line including: 75S3/32S3/516F2/312B4/CPK1/D104/manuals/cables.
This is a CCA excellent condition, fully functional, S-line. The
receiver is a straight S-3 (not A B or C). It DOES include the
200 Hz CW filter in addition to the rejection tuning, BFO, etc.
Cosmetically in great shape. It has a couple surface scuffs, but,
these could easily be rubbed off with a little elbow grease. Front
panels show no signs of wear.
Transmitter is CCA excellent. Full output with a set of GE 6146B's.
Transmitter looks great. One modification has been done to the
transmitter -- the RF output RCA jack has been converted to a
BNC jack. The modification is extremely clean. 312B4 is CCA
excellent as is the 516F2 power supply. D104 microphone is a non
amplified,
high impedance mic with PL068 plug (fits the Collins gear). It is
a "grip to talk" chrome mic on a grey base. Condition is good,
and the mic element is new. CPK1 is the crystal pack. It includes
crystals to allow general coverage from 1 to 30 Mhz in 200 Khz
increments.

3. KWM2 HF transceiver. No manual. No power supply. Works fine.
If interested, I can sell this along with either S Line (which
has the power supply). Tuning knob is skirted, no finger hole.
includes standard band coverage. 100% electrical. Cosmetically
a CCA good. Has a slight case blemish on the upper left trim
ring. Would look/work well by itself or along with one of the
two S-lines above.

Prices are negotiable, with preference given for a LOT purchase. Prices
are plus shipping costs from zip 46106:

S-1 Line: $ 900
S-3 Line: $1500
KWM2 : $ 500

Terms: Buyer prepays with certified check or, allow 3 weeks for personal check to clear. Net references available upon request.

The contracts for low radiation entertainment receivers were awarded to
E. H. Scott Radio Laboratories of Chicago. These receivers were simply
very well shielded, especially in the oscillator and IF circuits. There
were no active radiation suppression circuits.

Norman

4548. Want Manual on SPACE-MATIC 21 Keyer

I am looking for the operator's manual for a Data Engineering SPACE-MATIC 21 morse keyer from the early 70s. I am sure it is nothing more than a small booklet, but I can't find mine.

Thanks to anyone who can help me run one down.

>
> 73/George, WA6RIK

George - A way of doing the PTT in the 1960s on the DX-100 was to get a 110 volt DC relay. Usually these draw only 10 or 15 ma coil. Determine what series dropping resistor was needed and tap the required power off the low voltage supply somewhere.

The idea here is to use DC for the PTT relay and no AC is going down the mic cord and cross coupling into the mic input. Makes a nasty hum.

If the above idea doesn't work for you. Use just about any kind of small DC realy and a diode off the filament string somewhere.

Good luck,

73's Bob W7VZX

Put a 100K resistor across EACH diode when doing this to equalize the
reverse
voltage when the diodes are not conducting. Use 1 Watt carbon comp
resistors
for high breakdown voltage.

>I neeed a little relay?

The HD-1410 will directly key your HW-101. Just connect a cable
between the keyer output and the transceiver's key jack. The keyer
will key both positive and negative lines to ground with the following
specifications:

Positive Line - Max voltage, open circuit or spikes - 300 V.
Max current - 200 mA.

Negative Line - Max voltate, open circuit or spikes - 200 V.
Max current - 10 mA.

The remaining connections on the keyer are pretty obvious.

Too bad the darn built-in mechanical paddle is such an abortion!

I connected an external paddle through the (former) headphone jack.

Good luck and 73,

Bill, WA9NHQ

[hits his own shift key]

In the process of restoring old television sets (something I no longer do) I used to load the pickup truck up with a bunch of chassis and head on down to the local do-it-yourself carwash. Nothing like a good hosing with hot soapy water and then a rinse off to clean off years of dust and other crud.

While working on numerical control machine at a large aircraft machine shop, we would periodically hose off some of the older equipment with hot water and soap. Leave the machine to dry over night and put it back in service the next day. One in particular was a turret lath with point-contact germanium transistors wired up on cards as NOR NAND and FLIP-FLOPS. After about 3-4 months, the grease, dust and coolant mist would accumulate on the cards and cause the leakage to go up enough to start making errors. After cleaning, it would be happy as a clam again for another 3-4 months.

That makes sense for tubes with easily-washed brand labels and more
permanent (sandblasted or whatever) type numbers. But what possible
reasons did some companies (especially Philips and its associates)
have for marking the _type number_ in the wash-off stuff? I've seen
Philips and Amperex tubes with nice, permanent _date codes_ but
no visible type numbers left -- no way to tell if it's a 12AX7 or
a 12AU7 without testing. What were they thinking?

GAMPELAYING. May the spammers get you.

First, the tube with or not with air in it is immaterial, BEACUSE
the weight of the tube includeds its internal pars, including any
gasses. the other guy had it, and you do too. You really ARE
being picky.

Second, it is obvoius to all that the lead while in the boat will
displace its WEIGHT in water, but on the pool bottom, will only
displace its VOLUME. Not so much.

I will leave out the next obvious fact as it is only a joke anyway.

Damn, this is fun!

Hello:

I have a complete year (12 issues) of QST for 1930, housed in an
ARRL Brown cloth covered binder. The magazines are in VG condition,
all covers attached, clean, and don't smell. The binder is in like new
condition. This is a very nice complete year set of Early QST's.

PRICE is .....$40.00 USA + $5.00 USA Shipping = $45.00 USA Total

^^^^^^^^^^^^^^

Please Email me direct at..... radiorob@serix.com to reserve these
QST's.

Thanks...73..ROB.

Isn't there also a slight difference in the operating characteristics between solid state and tube rectifiers as well, above and beyond the higher voltage issue...? something along the lines of "response time" or "sagging"? (I am probably not using the correct verbiage here)

Read somewhere once that there were these plug-in solid state modules to replace the tube rectifiers in old Fender guitar amps, and that such a replacement would improve the performance of the amplifier in some fashion... or perhaps this is just marketing and there's really no difference between the two?

They are roller inductor, legal limit type. The 2040 has no wattmeter.
The 2060 has very nice wattmeter. It was a Dentron unit that Heath
turned into a kit. Heath also had an auto tuner.

Exactly! Great pain to work on the radio with mil-spec shielding.
Kazillion screws to remove B4 anything else.

I think the R 45 ARR 7 (airborne Halli SX 28? with motor tuning) had an
acorn tube used in a radiation suppression ckt. Was this just an RF amp?
As I recall, the set worked much better as a rcvr with this ckt removed.
Comments?

4588. FS or trade: Henry 2KD-5 <OR> BTI LK-2000 with spare 4-1000A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-28 00:00:00 UTC
From: kr4wm@sccoast.net
Message-ID: <MPG.df6919424dee74798968a@news.infoave.net>
Source record: 119586
Cross-posted to: rec.ham-radio.swap,rec.radio.amateur.boatanchors

The Henry:
Near mint condition, amp is almost like new inside and out. Full output, graphite 3-500Z tubes with about 10 hours on them. Checked by Omega Amlifiers (Knightdale, NC) last year, and found to have full output. Only used sparingly since then. Sits in a rack protected from dust. I found an amplifier that matches my radio, and need the cash from this one to buy it. $900 firm plus shipping, or will deliver out to 100 miles or so n/c. I have one other amp for sale, and only one will be sold- the other will be kept for a spare. See the other ad for information.

SPECS: Wired for 220

Uses 2 3-500Z tubes

I get about 600 watts out with 70 watts drive on my uncalibrated Ten-Tec tuner meter(see, I don't lie!)

Will do 1KW with 100 watts in (calibrated meter was used in this measurement)

Shows 2400-3800 volts on plate meter (CW/SSB)

Plate current about 600mA (2280 watts input)

Grey in color with silver-anodized aluminum and black front.

80-10 meters

The BTI:

Nice condition Brad Thompson Industries LK-2000. Uses either a 3-1000Z or a 4-1000A to develop about 1250 watts. Does NOT have the optional heavy-duty power supply. Has 3-1000Z in it, and a spare 4-1000A goes with this beautiful amp. Re-worked by Omega Amplifiers with a new zener, plate cap, relay, plate choke (rewound), and some smaller parts replaced. The "AG6K" parasitic supressor kit was also added when the work was being done. This is a large floor console amp, with soft lined soft naugahyde cover. Guaranteed to warm the room, and impress visitors with the glow of it's HUGE single tube, large copper-tubing tank coil, and other heavy-duty components. The bottom cabinet has been repainted, and looks very nice. The amp can be separated from the power supply with some longer cables, so the power supply can sit on the floor while the amp sits on your desk. Delay circuit keeps fan on for awhile after amp is turned off. This is a deluxe model amplifier for the discriminating amateur. $900 will get this beautiful example of a mid-1960's luxury amp. Pickup only. (May deliver out to 100 miles). Too heavy/large to ship. (Unless you're willing to pay

for the packaging services of a professional shipper)

SPECS: Wired for 220 volts

3700 volts on the plate at 800+mA = 2960 watts input
(Includes certification of rating - 1250 to 1500 watts depending
on frequency, with full one hour cycle test)

Does 1250+ watts with 100 watts of drive

80-10 meters

Light grey with cream color trim rings (matches Collins colors)

Will consider a Ten-Tec Titan amp trade for both my amps, or a Centurian
for one or the other. Mine are in perfect working order, yours must be
too.

E-mail to Web Williams, kr4wm@sccoast.net

Well, you are right, if filling the tube with air does indeed make it
weigh more than the water it displaces, it will not float, on the other
hand if you filled it with lead and it still displaced more water than
it weighs, it will float. Anything will float if it displaces more water
than its weight. So my orginal statement stands, it makes no difference
what is inside, as long as the weight of the water displaced is more
than the weight of the tube, it floats.

Trying to get a HE45b up and running, but having some trouble. Any comments/suggestions would be great...

A 7868 pentode is the modulator and audio amp. The final (plate modulated) is a 2E26. Problem is, no modulation. I have to whistle very loud into the
mic to get any indication that modulation is taking place at all. I have checked the mic and tested all the tubes, and all appear to be fine.

One outstanding symptom is that the 7868 (modulator) gets VERY HOT, alarmingly so, even when I am not attempting to transmit at all. I checked the tube-socket voltages and they seem to be OK, in the ballpark. The rig works fine in receive mode, incidentally, so as an audio amp the tube is working properly.

When I first got the rig there was a strange squeal (intermittent) upon adjusting the tank (output) capacitor for peak power. The squeal seemed to be coming from the 7868 or nearby.

Now I don't even get the squeal, and the relative transmit power seems to be greatly reduced compared to what it was. I used to get a half-scale reading on the meter when keying the mic and peaking the output, but now about 1/5 scale is the best I can get.

The manual states that the meter should fluctuate as you speak, and I have not had this happen at all. A loud whistle will make the meter reading drop, but only a very tiny bit.

One final note -- now when I key the mic the output hits its max value, but immediately falls off over the first few seconds.

I replaced the modulator 7868 tube recently, but the rig still does not behave as it should (there was no difference).

I would be grateful for any suggestions. The tcvr is in excellent cosmetic condition and the components do not show signs of failure, burnout or leaking, so far as I can tell. So... ??????. Anybody got any hints?

Many thanks,

JWG N1AEP Freeville, NY

Hi all,
I have a Heath SB-101 that was given to me by my elmer many moons ago.
Thuis beast is a great rig but is becoming a bit difficult to operate.

I need a Tuning dial mechanism, 6.8 MHz trap coil, a VFO assy would
also be nice (I've repaired it many times).

If you have one of these beasties kicking around or the parts I just
mentioned, drop me a note and tell me what you have and how much you
want.

Much thanks in advance...

> Handbook. Any help would be appreciated.

The NC-188 already has a BFO incorporated in the circuitry...
the major differences between the NC-188 and the NC-109 are
the product detector and the "Select-O-Ject" Q-multiplier,
which are on the latter but not the former. Though I would
think that you could certainly improve on the BFO's stability
with a more robust design.

You should be able to get owner's manuals for both through
W7FG, in Oklahoma(?), and I believe that National's manuals
included tube pin voltage tables along with the general
schematic, at least for some equipment models.

The "original" streak in me would probably opt for locating
an actual NC-109, as opposed to permanently modifying vintage
gear... but that's just me, I guess.

95% of tube types are still easily obtained -- just make sure your radio doesn't use the other 5%! Most sources I know of are mail-order, but you can also get tubes at swap meets, over the net, etc. Occasionally you can find a "normal" parts dealer who has some tubes, but their prices will usually make you cringe. Most tube prices seem to be equivalent or lower (after inflation) than they were 30 years ago, based on looking through old catalogs.

Makes me think of a contest -- who can design a rig with the most unobtainable/expensive tubes? Here's a quick try:

RX: 1L6 mixer, 6U5 tuning indicator, 7360 second detector, P-P 45s (or 50s!) for output.

TX: 210 oscillator, 6V6G multiplier, 6L6G driver, some combination of sweep tubes for output.

73,
Mike, KK6GM

Greetings Donald -- Interesting you should pose this problem as I have had the same experience, in fact I've had sellers who were highly insulted that I didn't know what their ICFTTS 99076 Mark IIIA was.

I solved the problem a few years back when at a Hamfest -- I picked up about 15 years worth of Radio catalogs HRO,AES etc. Great for accessories as well.

Not aware of any list on the internet. Some oldies such as Swan, Hallicrafters etc can be found at the Antique radio Pages below. The Radio Modifications list may shed some light on it as well. Used QSTs go for a song -- so a collection of 10 or 12 years worth may be helpful also.

Not much help -- but my old radio catalogs and QSTs have come in handy.

Bruce,
The SB-34 is (obviously) a triband rig. All solid state but for the finals. Operating voltages were 115 a.c. and 12 d.c. Output power was about 50 watts PEP. This radio tended to drift, badly, and there were several magazine articles written about corrective fixes.
Enter SB34 or SB-34 in a Web search and I'll bet you'll find a few notes on it. I have seen a few on here as well.
P.S. I no longer have mine...
Radio Randy

>Suggested frequencies for AM stations:
>14.286, + or -, 7290-7295 and 3870-3890.

I read the rules and think leaving out vintage SSB as a real
oversight. Even QST carried an early SSB (SSSC then) column from 1947
to the mid 50's. Think of the old Eldico's, CE 10 and 20's, Collins
S-Lines etc going to waste not to mention the Heaths, Vikings, B&W's
with SSB adaptors. They can be used on CW not SSB. Since I cannot
use SSB I will skip this and go to the ARRL version.

Several of us plan on being in the ARRL Field day with older SSB gear
(about 50% CW to make a score). I will be on 40, 20, and 15 SSB with
a vintage 1955 rig (may even have a Cosmophone on).

There is an excellent web page with LOTS of ham (amateur radio) stuff for the Psions. There is also a great packet radio program called PocPac from G0HZK (hzk@cix.compulink.co.uk). For all these web pages, check out the Psion programmers on the web reference list at:

I picked up a very nice SBE-34 at Dayton. It works very well with minor drift from startup and about 60 watts out. Mine came with a mic which appears to be a dynamic.

You can obtain a manual from "The Manual Man" or Hi Manuals. I will send their addresses if you need them.

I think Electric Radio Magazine had some articles on it which I have not researched yet. I will pass any info I find.

Have fun with this neat little rig

4654. Re: Question About Tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-30 00:00:00 UTC
From: lsmith <ckvnfm@mb.sympatico.ca>
Message-ID: <338EE973.D5B@mb.sympatico.ca>
Source record: 119458

Regarding this question, I replied to Jim directly, but have now copied it and posted it to the newsgroup so that someone else with the same question may also have the benefit of the communication.

Jim:
Sorry I don't have time to respond fully. I have had no trouble finding tubes for my many rigs...there are still many sources, mail order is one, but older local hams still have a lot of them, which are new in the box never used. There are still literally millions of tubes out there for the finding. I made a list of tubes in my various radios and look for them at ham fleamarkets, and keep a stockpile so that in 20 years I'll still be able to keep these great radios operating.

Rarely have I paid more than $3 each for them...except for transmitting tubes. These tubes last for many, many years, so don't worry about thinking that you will be replacing them every six months or so! The ones which are hard to find and somewhat more expensive are the TV sweep tubes which were used as final ampifiers in many of the high powered rigs in the late sixties and mid seventies, you will expect to pay about $15 per tube for those.

Don't believe what the solid-state crowd say about them blowing all the time, low performance relative to transistors, etc. These radios represent about the most fun per dollar that you will ever spend. I like the fact that if something does break or burn-out, that you can...for the most part...fix them yourself without needing exotic test equipment. Keeping the parts problem in perspective, can you go to the local radio store and get parts for your Kenwood, Yaesu, or Icom off the shelf? Answer is likely that they will be special order only, unless you are very fortunate to live in a large city with an exeptionally well stocked ham store. Try asking your local Radio Shack employee about a new CPU for a Kenwodd TS-850 and see what the reaction will be!

Performance of some of the radios like Collins and Drake are every bit the equal of today's radios costing several thousand dollars.

Well Jim, I'm out of time, but could go on for much longer. Bottom line,...they are a lot of fun! Get in there and give it a try. My only suggestion would be to try and see the radio operate before you buy it, that will save you the trouble of having to jump in and fix it before you have become familiar with things like actually having to tune up the transmitter! I think I like tube radios more than solid state, because you have to a real radio operator, rather than just grabbing the mike and yelling...they are just more fun in my opinion.
I encourage you to look at some of the following websites. You will find all the help that you could ever ask for and more when it comes to

tube radios:

http://www.mindspring.com/~johnmb/

http://ftp.barc.org:8080/pub/hamradio/arrl/infoserv/techmisc/boat-faq.txt

http://www.pcs.mb.ca/~standard/

http://www.ipass.net/~teara/vin.html

http://199.72.59.96/am/

http://www.cs.unc.edu/~nick/

http://www.teleteam.com/~jmiller/cca_html/ccahome.html

http://www.teleteam.com/~jmiller/

http://www.users.fast.net/~wa3key/collins.html

http://www.isrv.com/~joel/

http://pwp.starnetinc.com/k9gdt/index.htm

I'll stop there Jim, what I have provided will keep you busy for quite awhile, but I could paste up another dozen that I have bookmarked. If I can help, feel free to ask more, and I'll try to answer within the constraints of my time.
73 de
Lee Smith
VE4ANC

PS...I have been collecting and operating Collins equipment for the last couple of years, and the performance of the radios relative to my Kenwood is remarkable. The audio reports I get are vastly superior on the Collins, and rx performance is equal or better in many ways because I find the rx audio to be nowhere near as harsh and fatiguing to listen to.
Cheers
L

Shortwave pirate chasing actually has quite a following. George Zeller publishes a direectory each year of pirate stations that he's heard. A lot of them are one-time broadcasts, but some are quite regular. Some even list mail drops that you can send an SASE to for a QSL.

I personally have no problem with pirate stations. They're operating outside the U.S. amateur bands, so they're not interfering. Shortwave broadcast stations aren't found on this frequency either. I'm sure they know the illegalities and the risks, so please spare the lectures.

4656. Collins KWM2a trouble

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-30 00:00:00 UTC
From: Michel Fries <friesm@bil.lu>
Message-ID: <338EFA6E.F68AC44F@bil.lu>
Source record: 119460

Hi !
I just bought a Collins KWM2a with the wing sign and I got some problems with
the received signal strength. On 20m, a S9 signal on my kenwood will be
about 51 on the Collins side.

I replaced several tubes, from the RF amplifier to the IF amps but
nothing helped.
I am suspecting something wrong on the relays (bad contact maybe).

Any idea ??

Thank you very much in advance and best 73s !
Michel ON5HF

From: mellob@alumni.rpi.edu
Message-ID: <5mnbi0$1ojo@alumni.rpi.edu>
Source record: 119463

I remember when the reflector list that Jim Lockwood
maintained put about 6-8 messages in my slot each day.
Now this newsgroup gets maybe 40 or more posts per day?
The internet has done well for special interest groups
like this one here.

For a while now, I haven't been fooling around with any of
the vintage equipment I salvaged from the neighbors trash
about six years ago. I remember busting up a crystal oven
and a dynamotor trying to figure out what they were.

Anyway, I'd like to return the corner of my Father's base-
ment that he so graciously lent me many years ago. Happily
though, tinkering as a teenager has led to my career as an
RF/microwave engineer with Sanders. I've got boxes of
vintage stuff that I couldn't bear to throw away, but I
just need to get rid of. My hobbies have gone in other
directions.

So here's what's got to go. There is a Millen two-tube
exciter, 40-watt speech modulator, and power supply unit
for the two. All together they make a mostly homebrewed/
kit HF rig. Missing one tube though, an 807 for the exciter.
I never got the stuff working, but someone with experience
could in no time at all. There's a few hundred other (mostly
used)receiving tubes kicking around as well. There are three
or four pieces of Hickok test equipment but they're very beat
up. There are boxes of relays, including a few enormous rotary
steppers. Some are Claire, P&B, etc. I have boxes of
transformers; audio, impedance, plate w/ filament taps, etc,
and one big one with 3530/3720/2910 volt secondaries. There
are giant inductors from Stancor and a couple of GE 10 Henry
"reactors." Maybe those values we used in Circuit Theory
weren't so unrealistic at one time?! I have bunches of
capacitors, probably PCB filled, and a few very high voltage
Sangamo and Faradon types which are just impressive to look at.
I believe there's a handful of air variables in there too, as
well as plug-in coils and forms. There are panel meters, and
all kinds of other smaller components like pots, knobs, rotary
attenuators, etc. There's an electronic T-R switch and a
much older 120vac activated one. Must have made quite the
racket with full break-in. As far as whole items go, there
is a Perkin Magnetic Amplifier Regulated DC Power Supply
(6V@15A) and an ITA Mod-Max modulator in addition to the HF
setup and test equipment mentioned above. You also get two

fine wooden chests, pine I think - they're softish, which would look pretty sharp refinsihed and with new brass.

I'm sure there's stuff I'm forgetting. This is all '40s and early '50s gear. The HF setup is straight out of a 1942 ARRL Handbook. It all belonged to one Mr. Jordan. He passed away about ten years prior to my rescuing the gear from the trash of his unenlightened son. I think I told that story on the BA reflector a few years ago. Mr. Jordan was the chief engineer at WLYN in Lynn, Massachusetts. Some of the equipment looks like it had more use in broadcasting applications than in ham.

There is way too much stuff here to ship, especially since you don't know exactly what you're getting. Since I like road trips, I'm willing to travel halfway to give the gear to anyone interested. I will go as far north as Lisbon NH, as far south as Ridgewood NJ, as far west as Troy NY, and as far east as, well, as far as I can without getting wet! Whatever doesn't fit in my trunk *should* fit into the back seat of my little Volkswagen. This isn't a road show, though. If I'm driving, you're taking it. And you have to take it all, please don't ask for just some or one thing. So make some nominal offer if you're interested. And if there's only one taker, I'm happy with gas money and lunch. I'm not profit motivated and I don't really care if you turn around and sell the saleable items. I just don't want to have to toss it back into the garbage from whence it came.

So if anyone is interested, send me an email! mellob@rpi.edu
It's been fun reading the group the past few years. I wish you all the best of luck with your projects. You guys keep it alive and give younger kids like me a chance to learn about and see radios that actually glow in the dark!

-Brett KD1ZF

4661. LARGE HAMFEST NORTH NJ JUNE 7

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-30 00:00:00 UTC
From: pmalvasi@aol.com
Message-ID: <19970530204900.QAA08666@ladder02.news.aol.com>
Source record: 119465

The BARA Spring hamfest is a very large swap meet in Northern NJ about 10 minutes from the GW Bridge. Admin is $3.00 buyers and $10.00 sellers for 2 spaces. A great deal for a great fest which often is loaded with boatanchors and lots of surplus test equipment. The 73 Magazine Ad is incorrect - the event is Saturday JUNE 7 at 8AM. Talk in for hams is the 146.79 (pl 141.3Hz) repeater.

Call Jim Joyce, K2ZO for info. (201) 664-6725

4662. Re: ? german receiver Kw.e.a

>Thank you and 73.
>F6CFX
>email:bernardaix@hol.fr

The receiver was used in large extent for coast stations in Norway
after the war.
it covers 980-10200kHz
draw 2V 2,2A, heater voltage should be measured at each valve - +1,9V
anode supply 90...10V 15...20mA
I have also the Lw.E.a covering 72...1500(will not confirm it now)
I believe kWEa is the best ever receiver for AM receiption under bad
conditions (cannot prove it) in arctic areas.
Also ufb on cw
can easily be modified for good ssb receiption.
Good type AGC with agc amplifier
11x RV2P800 valves and two neon protection devices for antenna
2x RF amp, 3x IF amps, Osz, Mischer, BFO, AGC, audion detector and
audio output stage
Circuit diagrams available from DL6VW in K�ln, see callbook.
Matching Power supply is NA6 or NA6a, which has a resistor to be
switched in parallell with heaters if LwEa is used because this draws
only 1,8A

some are from BC stations..some are not..
all plus shipping...

Broadcast Electronics 5M100A console...5 channel mono with line amps,
cueing amp & monitor amps built-in... condition: clean & working...
$250

Nakamichi MR-2 professional cassette deck..missing outside cosmedic door..
other wise nice with all doc's...
$200

Sony CDP-390 professional cd player...clean & works great...many features
$200

Microphones

Shure: SM-7..studio mic...like new...
$300.....shipped

Shure: 55-SW...very clean (about a 9)..original, not the new junk..
$140...shipped

Shure: 55-S...original..like new..
$150...shipped

Tuner: model 33-D...very clean (looks almost new)
deco style ..
$140...shipped

other mic's available on my web site....

tube tester: clean & working...
TV-2/U...with data book....
$275

LS-3 speaker: completely restored:
new powder coating in & out..
speaker reconed..sounds Great!!!.
can email a picture if you are interested..
$125 shipped

Midland 50 watt 6m mobile, 80 channel..
$140

Thanks Pete for that kind offer of assistance.

Ya know, one of the more interesting projects is taking some of the 11
meter stuff and moving it up to 10 meters and then having a go at the
DX. (Where it's legal to chase DX.) They also make good cheap packet
radio gear for fized point to point wide area networks.

But I guess ol Pete stopped thinking and started hating everyone else
once he got his life membership.

Bet'cha think amateur radio's going to hell in a basket too. Can't
understand why no one want's to get a coded license. I bet you tune up
on top of newcomers with poor fists too. "They ain't real hams".

Or on top of packet, rtty, amtor because that ain't CW either.

Yuppers, Pete. It's guys like you that make me ashamed to admit to being
an amateur radio operator some times.

Go ahead and rant. I hope you have a stroke.

To the rest of the news group I appologize for losing it.

PS, I managed to work all continents with a converted Johnson Whiteface.
(That was shortly after CB went to 40 channels and the 23 channel stuff
got REALLY cheap suddenly.)

Hello Everyone,

Having just finished work on the BC-375E manual, my list of high
quality manuals is as follows:

BC-375E manual TO 08-10-139

R390A Operator's manual TM 11-5820-358-10

R389 Manual TM 11-855/TO 31R1-2URR-161

Hammarlund SP-600J/JX Operator's manual
Hammarlund HC-10 Converter manual
Hammarlund HQ-180 manual
Hammarlund HQ-180A manual
Hammarlund HQ-145A manual

Hallicrafters SX-101A manual
Hallicrafters SX-117 manual
Hallicrafters SX-115 manual
Hallicrafters HT-33B manual
Hallicrafters HT-37 manual
Hallicrafters SX-28 manual
Hallicrafters HA-5 VFO manual
Hallicrafters HA-1 Keyer manual

Schematics (laminated or plain) are also
available for the above equipment.

The materials and processes I use make these
the highest quality digital laser reprints available.

Please contact me via email for more information.

WWW Message Board Experiment

Folks,

May I engage your services for an experiment...

As you know, I set up a "Personal Web Server" on my
home computer running Win95. Previously, the server
had only a copy of my web page...

But, now...

I have taken the mirror of my home page off and installed
an automated message/discussion group faility called aptly
"Short Circuits"...

Please go to my home page http://www.qsl.net/k7on and click
on the rotating arrow and while I'm connected you'll be then
connected to my personal server where you can access the messages
entered by you and others.

It is threaded and resembles a Usenet newsgroup, but will not
be spammed as it is not connected to the Internet by a static
IP address...(this is part of the experiment, BTW...)

Please give it a shot!

I'll be watching for messages on there and I've put 2 already myself.

73, Brian http://www.qsl.net/k7on

Yes, the SB-34 is a very nice rig, refined by Raytheon from the SB-33, which was my first ssb rig and served me well. The 34 is a four-band 80-15, and it is not very useful for cw without some filter tightening (dsp is OK), but with a collins 2.1 Khz, 455Khz i.f., it is very fine on ssb. Add to this a fairly compact size, with a pi-net, easy-tune output to match anything, and 110/12vdc inboard power supply, and you have a niche market that still needs to be filled after this rig went out of production. My main complaint would be the lack of a little r.f. compression on tx, but normally this was not a problem due I think to a low gain audio tx chain. K9ZAT

Iam also on 504. MHz AM - YEAH!!

BTW - I also remember when "KR6" was the "Ryukyu Islands" in Japan.
I worked them once or twice but never did learn how to pronounce the
name of the darn place!

I think they changed the name of it now, and that is one "DXCC
country" that you can no longer get!

Back to BA topics here.... is anyone else out there running a Gonset
Communicator three?

Mine has the vibrator missing.

4675. Need Ham Radio Software For Psion 3a/3c Series

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-30 00:00:00 UTC
From: mjcd@intex.net
Message-ID: <5mldgjrao1@animal.intex.net>
Source record: 119545
Cross-posted to: comp.sys.psion.apps,comp.sys.psion.marketplace,comp.sys.palmtops,fj.rec.ham,fj.rec.radio,rec.radio.amateur.boatanchors,rec.radio.amateur.dx

My name is Mick Williams and I do I talk show on computers called "CyberLine" here in Dallas, Texas and consult on the side. I too am a Psion 3a user/owner.

Here is my problem:

I have a client I'm trying to sway from buying an HP 200LX (it's discontinued.) or a Windows CE. I've heard from the local Psion rep here that there is software that will allow the Psion to do PSDN (Packet Radio) and other ham stuff (DX Logs, QSL, etc...)

Dose anyone know of a source for such software and how to contact?

Thanks in advance,

Mick Williams

Thinking about what??? The fact is that the delicate
tube markings have been a problem for years and years. As for
"washing" forget it! They'll not withstand the breath test let
alone washing. Rubbing? disappears swiftly!

There must be a reason. Perhaps some OT with experience
will inform us.

I'm not even close to an old timer, but from what I've read the reason why the markings can rub off so easily is to prevent people from washing dirty used tubes and selling them as brand new.

Hello Folks:

Just a quick note to say thanks to all who wrote to me about the Vibroplex J-36 Bug. I received many messages with info on both the key...and the Vibroplex company in general. I now know a lot more about both!
The best part is that I was able to locate the part I need to bring this bug back to life. Thanks to all who steered me in the right direction...and special thanks to Neal McEwen ..K5RW..who came to the rescue with the needed part. Once again the Boatanchor crew has come to the rescue...and I'm glad to be on this ship.

Hopefully I will work some of you with the new bug...just as soon as I can figure out how to use it!! HIHI.

PS...I had originally typed out individual replies to all that wrote to me...but when I went to send all the messages......something zapped...and I lost all the replies...including the Email addresses of all who wrote. So....please accept this general Thank You to all that responded...you're a great group....and my day has been made!

Take Care...73...ROB. VA3SW

From: radiorob@serix.com
Message-ID: <338fa53d.12876397@nntp2.uunet.ca>
Source record: 119483

Hello Fellow BA'ers:

I recently received a Vibroplex Keyer in a trade. It is a ....

Signal Corps U.S. Army Key type J-36. Order No. 1456-NY-41 Date 10-28-40 Ser# 291. Made by Vibroplex Co. Inc. 796 Fulton St. Brooklyn, NY. It has a Black Krinkle Base, and nickel plated hardware. Since this is my first Vibroplex key...I'm really looking forward to using it......however, I'm missing a part.

The nickel plated binding post with the key contact for the "Dits" is missing. The plastic grommet that fits into the hole is there...but the binding post and key contact are not. Now...is it possible to buy a "New Post" from Vibroplex??? If so....where/how do I contact them??? Does anyone here on BA's have one of these posts from an old junker??? If so..please let me know what you want for it.

Also...I know diddley about Vibroplex keyers......so..if anyone can tell me anything about this key, I'd be most happy to listen. I know from the nameplate that it was made in 1940...and was made for the US Army Signal Corps...but is there anything else special/interesting about this key?? Any books been published on Vibroplex keyers yet?? I know I saw something somewhere about someone researching the history of the company.
I'm all ears folks!!

Thanks...73...ROB.

Rob,

Vibroplex has a web site at: http://www.viobroplex.com/

I believe it has an E-Mail capability you can use to correspond with
the company. Suspect you end up taliking to W4OA, the president.

As you indicate the J-36 was a Vibroplex model (some were may by Lionel
Trains, and other companies), they may be able to help. The other
option
is to search around the internet for the many excellent KEY pages that
are available. There maybe someone who has a "part" J-36 that they can
salvage a piece or two for you.

Good hunting! 73 Dave K7HMP

YAESU 901 DM (deluxe Model) HF 160/80/40/20/15/10a/10b/10c/10d/WWV with 11 meter mod! 100W.
SSB/FM/AM/CW/FSK.
Bright red LED Frequency display.
All solid state plug in modular boards with (2) tube, smooth finals. Tuner and finals match wide range of Antennas.
VOX. Keyer. APF CW filter. SSB notch filters. Noise Blanker. Plugs right in to AC or easy to wire for DC (AC/DC internal). Operation manual included!
Easy connections on back for patch or transverters unit (6m,2m,440).
Save big time because this highly sensitive rig has a built in AC or DC power supply, Tuner, Keyer,VOX, Current meter, SSB and CW filters, 11 mod, and optional transverters. Unbeliveable nice signal and recieve charateristics. After all, it's a YAESU. All for only $429 plus $25 shipping UPS to your front door. If you prefer COD add $49 for shipping.

4713. Navy O-scope help?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-05-31 00:00:00 UTC
From: lbrty4us@aol.com
Message-ID: <19970531184301.OAA14982@ladder02.news.aol.com>
Source record: 119496

Any knowledgeable email appreciated:

Have USM-32 (OS-34); unit is compact and very intricately built (like a Tektronics or ?). No manual/schem. Am contemplating fixing for basic shop use, as old Eico 470 died. Q's:
- Unit fries V803 (6X4 rect) on light-off; suggestons?
- Who made unit?
- Anyone work on these reasonably, if I can't easily fix it ('tis a tight little sucker)?
- Is the unit desireable (i.e., worth spending something to fix if necessary)?

Also can get for free OS-119, looks like little Tek (?), unk cond, no cover & dirty. Is it a desireable unit worth resurrecting for use?

FWIW, have 2nd dead 0S-34, & clean but dead BK 1431 w/schem (solid state) for nearly free if anyone wants to work on them.

Also seeking 2 x 0.5 ufd 1500v oil cap for the Eico (a $5 scope, but fun to show visitors with its 7" display).

Much thx in advance,
Frank

4714. BA's for pickup in Maine

Large confused, mostly dirty lot of Mil stuff, odds/ends, & some ham gear to sell reasonably. No list; email/inquire, and I may/may not know if what you want is there. Don't want to ship (time/hassle/expense). Bring your truck, hitchhike up or send your buddy.

Some highlights:
- very clean Drake B-line (R4B/TX4B/MS4), Manual, $200 firm;
- National NC-173;
- several MIL sig gens;
- NIB westinghouse 829B's;
- R274 (Halli SX-73), rptd OK excpt orig tuning knob & lock missing (this is the Halli equal to the SP-600) - not a giveaway;
- Heath DX-40;
- Heath 620 panadaptor;
- Dead Kenwood TS-520, w/ext VFO & clean Spkr;
- TA-12-C, remounted in 3' rack w/supply & mod;
- BC-610 tank coils;
- Bazillion CQ'S/QST'S/73'S/Poptronics/catalogs/etc., scatttered through many cartons;
- (2x) rackmount (4") FSK Converters;
- a couple tons of components & other gear, caps, xfmrs, etc.

Thx the read,
Frank

4721. WTB- Audio gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-01 00:00:00 UTC
From: yrplace@earthlink.net
Message-ID: <yrplace-0106972003000001@news.earthlink.net>
Source record: 119356

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec etc.

Especially interested in anything by Langevin and RCA, and Turner model 77 and 87 microphones

The older the better, and basket cases are always welcome.

Thanks in advance.

> in advance. Dan dragnet2@aol.com.

In the tune mode the screen voltage is removed from the 6146's and this limits the amount of current they can draw. As a result you get a very shallow dip of the plate current in tune mode. I usually tune mine in the CW position making sure to not let the finals draw heavy current for more that about 10 seconds or so.

Keith, I used my Heath SB-101 on my 1st field day. Just plug the power
supply into the back of the generator.
The rules ought to preclude the use of PV's, however!

Source record: 119415

Howdy Paul
I've got an EFJ Speed-X key with shorting switch in box with the EFJ learn the code pamphlet (not a copy) in excellent condition ! The key is in excellent shape except for some marks around mounting holes that could probably be touched up.
I've been told the box, or pamphlet, are probably worth more than the key itself but nobody has given me any indication of how that translates to actual value. It's probably a newer item than you're actually looking for, but I figured you might be able to help me assign a price to it !
Best wishes !

Hello Everyone,

Having just finished work on the BC-375E manual, my list of high
quality manuals is as follows:

BC-375E manual TO 08-10-139

R390A Operator's manual TM 11-5820-358-10

R389 Manual TM 11-855/TO 31R1-2URR-161

Hammarlund SP-600J/JX Operator's manual
Hammarlund HC-10 Converter manual
Hammarlund HQ-180 manual
Hammarlund HQ-180A manual
Hammarlund HQ-145A manual

Hallicrafters SX-101A manual
Hallicrafters SX-117 manual
Hallicrafters SX-115 manual
Hallicrafters HT-33B manual
Hallicrafters HT-37 manual
Hallicrafters SX-28 manual
Hallicrafters HA-5 VFO manual
Hallicrafters HA-1 Keyer manual

Schematics (laminated or plain) are also
available for the above equipment.

The materials and processes I use make these
the highest quality digital laser reprints available.

Please contact me via email for more information.

You need a new filter cap in your power supply. That's all. If you can't get the triple of four-section cap you need, replace it with three or four separate caps. Done it many times. Radio works after that. 73. Harry, VE3GRO

4744. Heath DX-20 comments

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-01 00:00:00 UTC
From: jangus@netcom.com
Message-ID: <jangusEB3KEs.GHs@netcom.com>
Source record: 119433

I've been working on rebuilding a Novice station I had 30 years ago.
One of the items was Heathkit DX-20 transmitter.

Just thought I'd mention a couple of mods I did to make it 'different'.
(Everybody always claims it's better, but we'll just claim different.)

1. Added a 4 pole Cinch connecter on the rear apron to bring in a VFO
with. (Hint, looking for a nice VFO to use, homebrew is fine.)

2. Stole a TR relay out of an old Motorola Mocom and installed it
inside. Put a BNC connector to go to the receiver (HQ-110) and a
voltage doubler on the filiment for +12v.

3. Changed the keyjack to a 3 conductor (stereo) so I can put a PTT
switch on the key base. (Ran the relay control wire through the
heath DPDT Standby/Operate switch.)

These have been fairly standard mods that have been done to most of
pieces of equipment I've owned over the years. (Well, the usual assort-
ment of mis-matched separates at least.)

The only obvious change to the front panel is the key jack is a bit
shinier that the rest of the hardware. (I'm looking for the clown that
put the toggle switch in the middle of front panel on the SB-610 I bought.)

Although to be perfectly true to my original 'first QSO', I should just
unscrew the antenna from the DX-20 and reconnect it to the HQ-110. One nice
thing about being a Novice, I never had to tell anyone why I was so slow
between TX and RX. :-) I just requested that they wait a bit before sending.

73 es GM from Jeff
(I thought I'd post something BA related after that comment about Pete.)

4745. WTB: SC-88 Cabinet

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-01 00:00:00 UTC
From: radiomuseum@webtv.net
Message-ID: <5ms1lt$l21$1@newsd-1.alma.webtv.net>
Source record: 119434

Looking for a cabinet that my RCA SC-88 will fit into - it does not have to be anything special - just something that will fit. Rcvr panel is standard 19" by 10.5" but the depth has to be 17.5". The SC-88 is almost identical to RCA AR-88, so that type of cabinet would also work.

The following books are for sale for the indicated price plus shipping.
All are in good condition.

o RCA pocket reference book- 1968 ($3)
o RCA receiving tube manual- 1966 ($5)
o Sams- AM modulation systems by Ed Noll, 257 pages. ($10)
o Orr's Beam Antenna Handbook- some small tears, back cover separated,
MCMLV, ($5)
o Troubleshooting Amateur Radio Equipment- Howard Pyle 1961. 128 pages,
front cover missing, but otherwise book is in good shape. Lots of good
boatanchor photos. ($3)
o Schaum's Electronic Communication- 1979,138 pgs. ($4)
o 101 Ways to use your oscilloscope- Middleton ($2)
o So you want to be a Ham- Hertzberg- 1966, 1975. Good photos. ($4 each)
o Practical Circuit Design- Tuite, 1974 ($3)
o ABC's of transistors- Sam's; George Mann 1975 ($2)
o Tube Substitution Handbook ($3)
o Ameco 1978 Novice/General License Guide, and Mastering the Morse Code.
($3 for both). Relive the fear of the test before the FCC. Will throw
in a couple of copies of Ameco's commercial radio operator's license
guide (1977).
o Realistic guide to electronic kit building. 1973. ($1).
o Forrest Mims- Project Construction 1976 ($1).
o The Oscilloscope- George Zwick- 1954, hardback. ($2).
o 1991 Passport to World Band Radio ($2)
o Complete Guide to Reading Schematic Diagrams- Douglas-Young 300 pages.
($3).
o DXCC Companion- ARRL Kearman ($3).
o Understanding Communications Systems- Radio Shack 1980 ($2).
o 80 meter DXing- Devoldere, 1978 ($5). Interesting predesessor to the
current low-band DXing book.
o The Challenge of 160- Si Dunn, focus on W1BB. This was published by 73
Magazine in 1977. A couple of blank pages when published, but very
interesting articles / photos of W1BB. ($3).
o FM and Repeaters- ARRL 1978. ($2)
o TTL cookbook, packet radio, and servicing AGC systems. $1 for all 3.
o ARRL Advanced license manual, 1990 or Extra license manual, 1990. Not
current, but good technical data source. ($2 each).
o The following 3 books for $10- ARRL Companion, How to get started in
Packet Radio- Ingram, and US Repeater Mapbook.

I'm looking for books by Rider and VanValkenburgh.

73, George. N0GH.

4747. National NBS-2 Receiver f/s

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-01 00:00:00 UTC
From: "H. Mark Nadel" <mr_ufo@i-2000.com>
Message-ID: <01bc6ea2$4c29dae0$b6e0e7ce@hmn>

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a general coverage receiver model NBS-2 mfg by National. The receiver is in excellent condition and works great. The price is $350.00. I do not have the manual. I will not ship this as to its size and weight. I am located on Long Island and will sell only as a pick up.

> in advance. Dan dragnet2@aol.com.
Dan, I think a simple solution is to just read the relative rf output meter position for maximum output when tuning or you can use an swr bridge in the forward power position the same way. The only problem I can think of is one you would have if your final tubes (6146's) aren't neutralized. Read you manual for this procedure.

Hope this helps,

Bob AD4MZ

Biggest difference is that the 2040 is 80-10 meters and the 2060 is
160-10 meters, both have roller inductors, 2060 has dual meters and
2040 does not. both good heavy duty tuners.

Source record: 119364

Have a kenwood 520s. As part of the tune up procedure the book calls for meter in IP position with mode switch in TUNE position and send and adjust the PLATE control for a minimum meter reading, but when in TUNE position the meter is flat with no deflection at all, however if I am in CW mode the Plate control will dip. Could you give me any advice, I am getting conflicting opinions on how to properly tune up a kenwood 520s. Thank you very much 73s Dan. dragnet2@aol.com

A ham friend of mine came into possesion
of a National receiver model NC173. He
says it is working and in very good
mechanical condition with the only noticable
problem being that the dial plastic has
yellowed some with age. He is thinking about
selling this receiver and was wondering what
is its resale value?

In case he decides to keep it, is there
anyone out there that has a manual for
it that would be willing to provide him
a copy (he is willing to reimburse you
for your copying cost and effort)?

4767. RCA ACR-111 worth??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-02 00:00:00 UTC
From: George Gonzalez <grg@umn.edu>
Message-ID: <5muiqj$fke@epx.cis.umn.edu>
Source record: 119369

I'm fixing up a 1937 RCA ACR-111 comm. receiver. It's a 15-tube monster, sort-of
a SX-28-compatible with a few minor design quirks. It's in restorable shape, with
no missing parts (except for ALL the tubes are missing), so its quite likely it
will soon be running again after replacing the caps and a few bits of crumbly insulation.

The question is, what is this thing worth? It's rather ugly, so it doesnt have much
intrinsic curb-appeal. But maybe that's compensated by the number of tubes and
attempts at electronic excellence. The owner is willing to put substantial $$$ into
its restoration IF its worth it. This isnt a cold-blooded business decision-- he
intends to keep it in the family as it was bought by his father. But he's hesitant
to put more $$$ than the thing is "worth".

A web search didnt turn up any info on this set, so I'm asking if anyone has any idea of its
"value" in $$. Thanks in advance for any info.

George R. Gonzalez (Software, old radios, and not much more)

> California who can align this radio properly? Help!

This is only a matter of adjusting the local oscillator trimmer adjustments; it's not all that difficult of a job. You probably have a coil for the low end and a compression trimmer for the high end, and you just go back and forth between the two until no further improvement in dial tracking is obtained. And as long as you're in there, might as well peak the IF and zero the BFO.

You may not get it _exact_, but you should at least get it close enough for normal operation.

I would argue that you don't even need test equipment to get the job done on a single-conversion superhet such as the S-40. You can make all of your adjustments using the stations on the band (i.e. WWV to line up 2.5, 5, 10, and 15MHz, CHU for 3.330 and 7.335MHz, local broadcast stations for MW, and a strong stable clear channel daytime MW signal to peak the IF, using maximum signal strength on the S-meter). A service manual would make location of the adjustments easier, but a bit of hunting/poking should give you an idea of which trimmers correspond with which band. There may also be RF strength adjustments for each band, but those can be peakxed for maximum signal much like the IF adjustment.

C.K.

4784. Updating Hickok 550X Tube Tester??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-02 00:00:00 UTC
From: AC6V <ac6v@ix.netcom.com>
Message-ID: <339367B9.3A4D@ix.netcom.com>
Source record: 119386

Just bought a Hickok Model 550X Tube tester. The manual sez it was circa 1943. Anyone know if tube updates were publihed for these -- say in the 50 60's era?? I think Hickok is out of biz and several years ago they had no old documentation for these fine old Dynamic Conductance checkers.

Any help would be greatly appreciated.
Thanks

Hello All,

I'm looking for a Hallicrafters HT-31 Amp to round out my SX-100/HT-30 rig.
Any out there?

(Of course I'd take the original SR-500 setup, too, if anybody offers!) HI

73,
Mike Warren, W5MAZ (in MN)
mwarren@fs.com

When 10 is open you can hear quite a number of these cb'ers on the band.
It really gets to be a problem and quite aggravating to have some idiot
yelling "aaaaaauuuuuddddiiiiioooo" (seems like that is the only thing
they know how to say) and interrupting your contact. Is the ARRL making
any complaints to the FCC about this? Maybe that spark gap transmitter
would be just the thing to fire up on top of them. As far as worrying
about them converting a cb rig to 10, they don't have to do that. Most
do not have the intelligence to do it anyway, all they do is buy import
radios that already cover the 10 meter band, or use amateur gear.

You are correct, if the screen voltage were completely removed there
would be no output at all.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

I am sending this message anonymously, since I don't want the owner to get pissed at me if he ultimately doesn't want internet business. I've been trying to get him to get on the net, talking about all the internet demand for tubes. But its hard to teach an old dog new tricks. :) Maybe a couple hundred calls will convince him. If he goes out of business, then where am I going to buy all that cheap surplus stuff incl. tubes???

Normally, I can buy almost any types (minus the real expensive transmitting tubes) of tubes for $1 or $2 locally. The company is R5D3 Surplus. Phone: (503)774-6560

I know he deals in large lots of tubes via mailorder, so you may be much more likely to get him to ship you an entire box of... for example sweep tubes, than to have him just send 1 tube. Or offer him $4 per tube via mailorder. I don't know what will happen.

I do know that he gives great deals on test equipment and everything else, unlike alot of dealers who treat their stock like its some kind of electronics museum where an old 514D Tek scope would sell for $200 :) Bob, would sell it for $10.

Just tell him Mr. 6080 sent you.

Thanks,

Mr. 6080

Message-ID: <3393727D.7BBB@calweb.com>
Source record: 119391

For Sale:

3/4 inch low loss coaxial 50 cable, 80 foot lengths,
connectorized with
large Mil Spec connectors, supplied with adaptors for 3/4 inch connector
to Type "C" and with RG-214 Pigtails with "C" connectors to adapt to
either Type N, HN, or PL 259. Cable was used with TRC-113 1 Ghz
multi-channel PCM radio system. I have 8 each 80
foot systems with all adaptors as noted at $75 per system, ups prepaid
conus. A great feedline for amateur VHF/UHF and or high power systems.
Condition is like new. I do not know the cable nomenclature. The
adaptors from the 3/4 inch mil connector to type "C" are UG 1375/U

Tnx.

I have found some more new in the box Amperite time delay relays.
They are the 115NO120 (115VAC, normally open, 120 second delay).
Eimac says that 60 seconds is fine for the 4CX1000A.

They are of course the octal base.

$24.95 each plus $2.00 shipping for one. For 2 or more I'll pay the
shipping.

Dave,
A manual for the NC-173 is available from Hi Manuals, P.O. Box 802 Council Bluffs Ia 51502. It is listed in their catalog # L at $14.95 + .50 for insurance.

I ordered a manual for my NC-140 and it was very good. He is a ham (been around for years) who owns a print shop and can copy just about any thing you want.

I saw an article in QST about building a neat transmitter - it used a rotary spark gap and a 1.5KW 500 Cycle transformer. Any information about converting CB sets to ham radio bands is certainly ill advised because just in case you have not heard there is already a major problem with people from 27mhz operating on the low end of 10 meters and many times elsewhere as well.

It is bad enought that the new licensing structure virtually assures that anyone with an IQ greater than 33 can pass the tests without getting into the business of giving people info via Internet or otherwise of how to polute the bands even more. Altho, based on some examples of new hams I have seen lately, I think there are CB'ers with more technical orientation and brains than they.

Yea, it's too bad we couldn't have a Volunteer organization like the
VEC's to confiscate equipment from pirates/outof banders/ jammers and
the like.

We could get lots of ham stations started in high schools with all the
nifty equipment we would be picking up.

4804. Another neat RX.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-03 00:00:00 UTC
From: BOB DUCKWORTH <bob@atl.org>
Message-ID: <33949452.2BCB@atl.org>
Source record: 119313

No I didn't build it but am very happily working on someone elses HBR-16. The Home Brew Receiver 16 tubes article from the Oct '59 QST appears to have gotten someone so fired up that he had it built before the Dec QST and the 5763 product detector mod.

If the Mosley CM-1 description bored you, stop reading now.

The Mosley had 5 tubes (actually 10 as there was a triode and pentode in every one of them).

This HBR-16 has 16 tubes (actually 17 if you count the one 12AU7, 2 x triode as two).

I don't know about RX design so I'm gonna ask some questions and hopefully some will be kind enough to post what they know so I can get this thing running in top form.

Circuit starts with a 6BJ6 Pentode as RF amp. Plug in coils for each band. Antenna link coupled to grid coil which is tuned by one of three sections of the 5-23mmf/section VFO cap. RF gain via cathode bias pot.

Mosley manual said triode amp is better on high bands owing to noise considerations. Real feature or just making what they used look good?

Output of the RF amp is coupled the same way (link to tuned grid) of the first mixer 6CB5. Plug in coils are used here too with tuning by another section of the VFO cap.

Any suggestions as to least aggrevating approach to making sure all these plug in coil based tuned circuits track well?

The VFO, a 6BH6 is tuned by the third section of the VFO cap and also uses a plug in coil. VFO feeds 1st mixer via same grid as RF amp.

How to determine best VFO injection level?

Output of first mixer is 1600kc and makes it's way to the second mixer 6BC5 via a link coupled, double tuned, transformer wound on a pill bottle.

Here I'm curious as to how to determine whether ot not the amount of coupling I have is right, too much, or not enough. Would a 1600kc xtal (there is one in the junk box) be too tight as a filter or attenuate the signal too much at this stage of the RX?

The second mixer gets its' LO from a 1700KC 6C4 xtal osc. and is sampled through a 100kc double tuned IF transformer (Miller 612-M1) by the 6BJ6 first IF amp. Mixer gain via cathode bias pot.

Again, how to decide what injection level for 1700Kc signal is best.

Deja-vu, the second IF amp which is followed by the third of the triplet of transformers. The newly shaped IF signal is then routed to either a 6BE6 product detector or 1/2 of a 12AU7 double triode as envelope detector. Both IF gains are via one cathode bias pot.

As an operator, what is a good way to tell how much IF gain is enough.

BFO comes from a 6BH6 with Miller 012-M5 BFO coil and running as electron coupled osc.

Injection level question again.

The other half of that 12AU7 samples the output of the IF string and controls gain of the two 2nd IF stages for AVC and also drives the 6CB6 'S' meter amp.

Audio from either of the two detectors is amplified by a 6C4 driving headphones of a 6AQ5.

Hey, that's only 15 tubes! Well there is also a 6BH6 xtal osc running all by it's lonesome to provide a cal. signal.

So there. A bunch of gain distribution and injection level questions about a 37 year old radio. I'm all ears.

-bob

Tubes are being made in Russia (Sovtek, Svetlana), China (can't remember
brand if any), Czech Republic (Tesla) and Serbia (EI). Look at
www.sovtek.com for details. Sovtek also makes tube amps for audiophiles
and musicians. You can email Sovtek from their web page and ask for the
address and phone of a Sovtek dealer in your area. Also, there are various
mom and pop electronic shops across America that still sell tubes; look in
your local phone book and call around. Another good source is elderly
amateur radio operators, amateurs interested in boatanchors or other old
radios, and nonlicensed BA/radio collectors, many of whom have boxes
filled with a polyglot assortment of tubes that they may be willing to
give away or sell for a nominal amount. Putting a wanted ad in your local
paper is the best way to find these people.

Hi All,

I have a mini dual band wide band receive HT FS. I am asking $225. Works and looks like new (no scratches), Mars/Cap mod done.Includes box, strap, original 3" duck.
The specs are:

The Standard C508A

(a) 280 mW transmit power
(b) 60 memories; stores frequency, offset and CTCSS tones
(c) RX 100-180, 340-400 & 400-480 MHz
(d) TX Amateur bands 2M-70cm
(e) Store 2 M & 70 cm frequency in one memory
(f) Operates from 3 volts "2-AA" - Lasts weeks!
(g) Unsurpassed 0.158 micro volts sensitivity
(h) CTCSS Encode & Decode
(i) Scan 1 MHz, full range, memory, block, CTCSS
(j) Scan priority memory channels
(k) Scan pause, busy, hold
(l) One call channel
(m) Dual watch
(n) PTT lock
(o) One touch squelch-off button
(p) Battery save mode
(q) Automatic power off
(r) Rotary channel selection
(s) Keyboard lock
(t) Unsurpassed intermod rejection
(u) 1750 tone burst
(v) Dimensions: 3.35" (H) x 2.28" (W) x 0.98" (D)
(w) Weight with battery 5.65 oz

We are a small Police Department in Texas. We have 20+ Bendix/King AN/PRC-127 hand units. These units were procured from the military for use by tactical officers.

Bendix/King is unwilling to talk about these radios other than the fact that they acknowlege they exist. It is very frusterating - makes one want to think about a boycot.

We have no real budget at the department and these radios have filled a void that otherwise could never have been accomplished.

I have heard of several modifications that can be performed on these units. I am seeking information on any and all modifications that can and have been done to these radios. Such as installation of the high/low power switch, installation of the scan switch, etc. . .

Also seeking anyone that has accessories that they would be willing to sell or donate (for tax write off) for these units.

Anyone with information on these units please e-mail me at hhmercer@airmail.net

Thank You

Sgt. Lindsay Hodgdon
Lone Oak Police Department
Lone Oak, TX

Anyone with any information of the AN/PRC-127, I am interested in visiting with you. Anyone with information about the AN/PRC-127 (A), Please let me know what the revision (A) is . . .

Uh ... the rest of us would like to know where "all the time" you see these for $500-700. I'll buy all I can get at that price. $1200 seems to be pretty close to the usual rate for a later serial with optional filters in very good condition. Lets say I could buy the receiver for $500. I could pull the filters and get close to that for them alone. Then probably sell the receiver with no filters for $600.

Whether $1200 is the right "value" price or not, isn't the issue. It certainly is in line with what the market is doing on these things.

I had a KWM-2a (non-winged) act almost exactly as you describe.
Receive sensitivity was way down, transmit was OK.

I found that I could re tune the rig internally and get the receive to
perform as it should but then the transmit was way down.

It turned out that a short piece of coax from the Tx/Rx antenna
switching relay to the receive RF amp was shorted. Yes, it was a dead
short at least at DC but at RF it just de tuned the receiver. After
replacing the piece of coax and re tuning, it was as good as new.

At the time, 1967, I was the custodian of the MARS station in
Nellingen Germany. The US Army used lots of KWM-2a transceivers and
we had a repair shop on post that fixed them. I knew a couple of the
technicians and asked them if they had ever seen that trouble before
and neither had. So I would expect that it was a freak failure and
probably not what's wrong with yours but it might give you some ideas.

Good luck,
73 - John - WA8ZGO

Dan-

Bob in Atlanta.
I've a Collins ARC-58 RX/Exciter.
See Fair radio catalog.
Mine has not been used since overhaul at Warner Robbins AFB and is
in excellent condition.
Along with it I have partial manual from fair radio.
Control head
connectors (you'll have to make a cable)
t-195 rf deck (150w dissapation ext anode tube)
that I was gonna make an amp out of to go with the ARC-58
and the audio amp that goes with the ARC 58 and it's connector.

If you can get that globe strapped to a pallet with tubes wrapped and
boxed separately, it will ship just fine via Yellow or Carolina or
other motor freight.

I am posting this for a non-internet connected friend, I will handle transaction.

HQ-100A with clock, S100 speaker (these are rare!), and ORIGINAL manual - $180/offer

All in good condition. Radio front is excellent, lettering knobs are good. Most tubes are new. Minor scratchs on case, small rust spot on top. Speaker is in good condition,some light scratches on case. Works well. I also have a 100A, and they are great casual receivers.

All plus shipping. Preference given to pick up in San Jose area.

Actually Heathkit marketed two other kit transmitters before the AT-1. The Heath company aquired a large inventory of suplus components left over from World War II and began selling them through ads in radio magazines. In the March 1948 issue of Radio News, Heath offered a "Midget Amateur Transmitter Kit" which was a single tube, 1 watt, 80 meter CW transmitter, for $3.95. Also offered was a 25-watt CW/AM transmitter kit that covered 80-40-20-10 meters for $19.50. The power supply kit was an additional $10.

IMHO, this is a sleeper in the bargain quility AM TX arena.
Lots of little guys with 2 x EL34 audio (50W out)
driving 2 x 6146 (100W out) for 150W output at 100%
modulation.

If you need the little guys, you'll have to wait until I
find a manual or start restoring the beast.

Another nice bargain AM is the Viking II. 2 x 807 mod 2 x 6146.
About the same power.

: base

Any high impedance mic will be fine. You don't need the amplification
provided by the preamp in the D104. You can bypass it, or if you use
it make sure the batt is good - otherwize you get distortion when the
batt is weak.

That God View may be that you haven't read your bible.
In theKing james Version, God apparently has conversations
with other Gods.

What about the possibility that God is a member of a Ham radio
Club of the Sky? The bibles then, would be their version of "Intro
to Ham Radio" and the code test? Then, too, the wars of religion
could then be laid at the feet of the no-coders.

And you know I wouldn't kid you about a thing like that.

Correct!

The AT-1 was my first transmitter as a Novice back in 1961. Sure wish I could find another one. Used it with the Heathkit AC-1 "antenna coupler" that had a light bulb for a tuning indicator!

4862. Morse Code - Instructograph Information Request

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-05 00:00:00 UTC
From: 3W8PE1B <willi6@erols.com>
Message-ID: <33978467.1C9F@erols.com>
Source record: 119269
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I have an Instructograph Code Instructor. I have no idea which model!
I would appreciate additional model info and source of manual or copy.

In the lid is a small "brass" logo label, I can find no other markings
or identification.

The unit is in the typical black fabric covered wooden carry-case.
The measurements are approx. 7.75" (D) x 10.75" (W) x 7.125" (H)

The carry strap handle is on the front vs. the top.

Two small hinges on rear and two small snap-latches on front.

The inside top plate is black bakelite, no markings.

Looking from the front/top:

Upper left corner - motor speed control pot and tape contact assembly.
(1.5" Black knob with white arrow)

Lower right corner - tape feed/supply reel.

Lower right - volume or tone control?
(1.5" Black knob with white arrow)

Upper right - four binding posts, in line down right side.
(phones? contacts?)

Center (more or less) - tape take-up/pull reel.

Unit powered by 110 VAC.

Single tube (oscillator) inside with 117L7/M7 GT.

Small access panel on rear (missing on this unit).

As noted above, I'd appreciate any additional info.

Regards es 73, Dave K7HMP

Wasn't the AT-1 Heath's first amateur transmitter with a 6L6 final running about 25-30 watts input? (cw only). Had a grey cabinet with rounded top sides, a square meter centered on the front with a red pilot light beneath it, if I recall correctly.

This Globe King was working perfectly until I accidently plugged in the
wrong
tube in the 5Y3 socket and the resistor to the multi-meter burned out.
The transmitter is too big and too heavy for me to mess around with it any
more.
The transmitter has a 4-400 in the final and looks good. Full power
output 375 watts the last time I used it on 160 meters.

Source record: 119348

I posted a querry on this unit a while back.
The Collins sticker inside says it is a model 312A1 Model 200.
It is not complete. It is missing the wattmeter. The plug part of the
lumiline bulb is cracked. The clock works and is accurate.
The direction indicator and the antenna selector are not wired up
The knobs are the same as those on my 75A4, but do not have
bristol type setscrews.
The speaker is in perfect shape with no rips or cuts. The rubber feet
are fine.
There is an extra perforated front panel that does not have any cut
outs included. The exterior is in real nice shape.
There are no other external switches or things connected to the unit.

Will take best offer by June 21st.
In the mean time, if you are interested, send an E mail and I can send
along some .jpeg files so you can look at the unit.

4872. Help! Yeasu FL 2100B linear + TS440

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-05 00:00:00 UTC
From: Richard Spingarn <ras@eagleprint.com>
Message-ID: <01bc7153$0ed81e00$7322e8cd@eagle>
Source record: 119349

Hello,

I have a Kenwood TS440 that I am trying to hook up to a Yeasu FL 2100B linear. The Yeasu's internal relay is triggered by shorting it to ground. My problem is I can't figure out how to trigger the Yeasu internal relay when I key the 440. According to the Kenwood manual, the 440 has an internal "control relay" that is activated via the remote DIN connector on the rig. This relay is supposed to trigger the linear's relay. But, no matter how I wire the DIN plug, I have been unable to make this happen.

As per the Kenwood manual, I have moved the jumper for the control relay to the "on" position.

Any ideas would be greatly appreciated.

Source record: 119277
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.swap

Hello to All:

I am looking to purchase 2 RF meters. I mostly need an RF Level meter that has a range of (approximately) -40 dBm to +30 dBm. Ideally, the scale step size will be 10 dB. The more sensitive the better. These need only be of COMMERCIAL grade. I do not need (nor can afford) Lab. quality equipment.

I also need a VSWR (or SWR) meter. I hope not to have any SWR's greater than 3:1 so anything at or beyond is fine.

Will buy same day as contacted...need lever meter immediately. Plan to ship next day air...freight collect. Payment terms are up to you.

Thanks!

>
> Bill/WB8KTA

Actually, there was no red pilot light; in fact, no pilot light at all! I just finished restoring an AT-1; it's difficult to find the correct complement of "proper" knobs and meter for the rig. The knobs were the early Heath black fluted pointer knobs with skirts on the "driver" and "output" controls, and the early Heath black fluted pointers for the meter and band switch which look like "Daka-Ware" pointer knobs, but weren't (they were custom made for Heath). The meter is an Emico iron-vane type movement; these are usually inoperative, as the movement took quite a beating on CW; in fact, Heath provided a "center-off" detent on the meter switch to avoid meter bounce on CW; this position was apparently rarely used! I was lucky to be given an Emico plastic-cased meter which I rebuilt into the original Heath black metal case.
The transmitter does indeed use a 6L6 as an amplifier, driven by a 6AG7 oscillator. The rectifier is a 5U4G. The amplifier normally operates "straight through" on 80 and 40, and doubles on the higher bands. Measured output with the one I finished was 19-20 watts on 80 and 40 meters, and about 16-17 watts on 20 and 10. Quite acceptable from a 6L6 running 30 watts input. The output circuit was link-coupled to the antenna, providing a fairly high impedance, in spite of the SO-239 coax connector on the back. Enter the AC-1 antenna coupler, designed to solve this problem, for $14.50, back in 1954! It used an NE-51 neon bulb to sample the RF output, and give an "approximate" indication of RF output to the operator. Trouble was, it also lit under high reverse RF voltage conditions, so a bright bulb could also mean high SWR! The oscillator

was on continuously; only the amplifier was cathode-keyed. The rig could be modified during construction for oscillator/amplifier keying...Heath didn't advise this as it usually resulted in a keying "chirp". CW keying monitoring in the receiver was thus difficult; I remember learning to key without sidetone as a Novice; it sure forced good keying habits with a straight-key, although I wouldn't try that with an automatic keyer and paddle today!
The little rig was quite a "kick" for $29.50 in 1954 when it first came out. The antenna coupler followed about 6 months later and the VF-1 VFO about a year later, for the Novice who "graduated" to General.
It sure brings back memories to operate this rig again 43 years later!
I WILL use the "center-off" position on the meter switch during keying...no more spare meters!
73 to all,

Bill...was the 25 watt Heath transmitter you speak of illustrated in the "Radio News" ad? Do you know the tube complement? I recently restored an AT-1 and am interested in early Heathkit history. Wasn't aware that they marketed an amateur multi-band xmtr before the AT-1 in 1954.
Thanks and 73,

Bought this rx from the local thrift store ($5). Very clean, works. Great fun, takes me back to my youth, I guess. Even has a BFO and find I still can copy code! Wondering when these were made (S/N 224742)? Guess some attempt at alignment would help (saw the advice to S-40 owner). Will Radio Shack contact cleaner quiet the slightly noisy pot and switches? How's it differ from the S-38C? Did I see somewhere a collector's guide to Hallicrafters gear?

Any tidbits about this item appreciated. Realize this is a a pretty mundane item among you BA fans. Just dropped by for a little info. Thanks,

Hi Thomas -- There is a book titled Radios By Hallicrafters - Chuck
Dachis, ISBN 0-88740-929-6. Your Halli was made in 1957-1961 --
suggested price $40 - $60, so u have a bargain. The C model (grey
finish) has the "half moon" dials while yours is the slide rule dial.
Tube line up was different between these two models.

Tweak em up and enjoy the grand ole radios of yesterday.

4893. Re: AT-1 Heathkit Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-06 00:00:00 UTC
From: ham@cybercomm.net
Message-ID: <3397db50.722155@news.cybercomm.net>
Source record: 119294

Early vs. Late At1s had differant type knobs. Early had
Collins-looking knobs, late had Heath-looking knobs.

B.T.W.....
Mine looks like it was built by a Novice. But it works.
Do I ruin its' value at all if I rebuild it?
Using same-type carbon resistors...
What do you think??

..Dave

4894. 50.400AM this weekend

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-06 00:00:00 UTC
From: Dave Booth <*SPAMSAVER*booth@pactitle.com>
Message-ID: <339874DF.59E2@pactitle.com>
Source record: 119295

Hello everyone!

Once again I'll be out calling CQ on 50.400AM this weekend.

So far I have about 10 grids. Most from up north.

I'll call CQ on the hour starting at 10:00pdt through 20:00pdt.

Hope to get some new grids this weekend.

If you have not checked out my 50AM web page please do so.
I've also updated all the grids and calls to date.

Hi all: I am looking for the power supply for the Johnson SSB adapter.
Any condition will be fine. Thanks! Bruce, KD1MW. Please reply only
to E-mail : shiso@ici.net

4896. PRM-6A Voltages

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-06 00:00:00 UTC
From: Steve Rohrer <srohrer@sprynet.com>
Message-ID: <3398C707.5209@sprynet.com>
Source record: 119297

I've got a Multi-Elmac PRM-6A up and running, but have guessed at the pinouts and various voltages necessary to make it play. Would be interested in hearing from those who know what I should be feeding this device.

Tnx - Steve

Who makes the Radio Shack tubes?

The horizontal oscillator tube I bought from them went sour after less
than two hours of operation and temporarily turned the TV into a small
X-Ray machine. This tube was made in the USSR

The 12BZ6 tube I bought from them caused the the AGC control to
malfunction. Probably an internal capacitance problem. An RCA tube
worked properly in it's place.

The 22JU6 tube I got seemed to work pretty well and worked somewhat
reliably for over a year. This was a USA made tube.

Radio Shack has a 66% failure rate with me.

What about International C? The service tech at RL Drake warned me to
stay away from those tubes.

>TIM....THE REST IS B.S.

BS yourself. I have several tubes which I kknow are new,
because I bought them that way.

they are out of their boxes, because I store them in racks
in the equipment.

I have some that I took out of gear I salvaged out.
they have never been plugged in, so of course they have
never been trurned on.

they are new, out of box.

Not for sale.

They are not part of the lot I have for sale,
which includes some unused, which are not in box.
Someof those are still wrapped in the paper they were
boxed in, but the box gave up the ghost long ago.

They too are unused.

ciao.

That is just not true.

I have a number of tube types that are bulk packed - their box is for 100 new tubes - there are no individual cartons.

This was not an uncommon way that an order for large quantities of tubes were sold.

So without an individual box does not necessarily mean a tube is used.

I believe what is at issue here is how to represent a tube for sale. The easiest way is to have a known good tube in mint condition in a box which matches the brand and age of the tube. Given not other contradicting information, one might state that the tube is NOS/NIB.

However, I have purchsed lots of tubes and many are represented as NOS where they are not. It is probably more useful to discuss testing of the tubes and recourse if they are bad. Or by them cheap enough to toss the ones that don't make it.

I buy and sell used tubes, so I always say that they are used, tested with a 30 day warranty. I feel however, that lots of times the tube I take of the carton and test is obviously brand new, never used. I cannot however prove it as being old, I don't know it's history...

==========

Henry,

I enjoyed the WEB site for the Radio Museum.

Suggest a "search" on telegraph keys on the WEB.
There are several excellant web sites devoted to collecting
and identifying telegraph instruments.

You might contact the following gentleman, at one
time (7/93) he had the "remains" of the ESM "company":

Jim Hess
521 2nd Street, S.E.
Dyersville, IA 52040

PH: (319) 875-7931

Other sources of info:

The Vail Correspondent
c/o Tom French W1IMQ
Box 88
Maynard, MA 01754

Morse Telegraph Club
E-Mail: dotndash@bmt.net

Hope this is helpful in your search. Regards, Dave K7HMP

I've got various pieces that are sitting around gathering dust/lint.....

-YAESU YP150Z Dummy Load/Wattmeter. Looks like Waters Wattmeter. 3
scales: 6/30/150W
resistive load has AC cooling fan. Nice package. $75.00

-TRIPLETT Model 1200C ANTIQUE VOM dual meters, 5000 ohms/v dusty,
lettering a bit
faded, otherwise OK. $25.00

-TRIPLETT 3413A TUBE TESTER, with manual and charts. Works. $50.00

-KNIGHT KIT Model P2 SWR/Power Meter with book. Has remote bridge, reads
relative
power and SWR. $25.00

-HEATHKIT SWR BRIDGE: Oldie, one of first ones they made. Reads
rel.pwr/SWR. $20.00

-HEATHKIT WATTMETER/SWR BRIDGE: HM2105 wattmeter goes to 250W. Remote
bridge.$35.00

-HEATHKIT HO13 HAMSCAN with book. Not working. Looks good except for
ding/indentation
in corner of panel. Everything there. No time to fix. $50.00

-SUPERIOR ELECTRIC 120VAC PowerStat, 28A. This is BIG. PICK UP only (if
you can). Nice shape. Great for bench press. Offers.

-ESPEY Mfg.Co. US Signal Corps I-72J RF Signal Gen 100 kc - 32 mhz. Mod
and unmod
ouput, works. Nice. $35.00

-ELMAC PMR6A with book. Looks good, never fired up. From estate. $40.00
-ELMAC PMR7 also with book. Same story. $40.00

-TWO ORIGINAL MANUALS for BC779A - (Hammarlund SP400, same receiver)
$12.00 each.
-ORIGINAL Manual (one of those rexographed things) for ELMAC A54/H
$10.00

All prices plus shipping.

Pls e-mail inquiries!
Thanks - 73 Al W1UX

Hello:

I have the following radio literature/books for sale. All prices are
in USA Dollars...and shipping is extra. Please email me direct at....
radiorob@serix.com to reserve any of these items.

##
2 Cardboard Sliderule Calculators made by OHMITE. One is a Parallel
Resistance Calculator/Ohm's Law Calculator, and the other is a
Capacitor Calculator. One from 1949...one from 1960.

VG Condition

PRICE.....$3.00 USA for both.
##
Cornell-Dublier Capacitor Catalogs. 5 small sized catalogs from
1946-1948. Servicing tips, Ads, Articles relating to capacitors.
4 of them with the original 1 1/2 cent stamps still affixed to them.

VG Condition.

PRICE.....$3.00 USA for all.
##
11 different Newspaper styled and Booklet styled Radio parts catalogs
from the 1950's to 1980. Most are from the 60's. Full of parts,
surplus, etc...all from CANADA.

PRICE.....$5.00 USA for all.
##
Radio Handbook 9th Edition. 1942. Editiors and Engineers. Hardcover
640 pages. Lots of great boatanchor ads at the back of the book! Great
war issue Boatanchors book!

Good+ Condition. Cover is rough...but attached. No loose pages. Couple
pages with minor damage. Not a beautiful copy....but not a dog either.
Great book to fill a hole in a collection...or excellent for
reference.

PRICE.....$12.00 USA.
##
Heathkit Assembly Manual. Model 10-103 5 Inch Triggered Sweep
Oscilloscope. 1971.

VG Condition..with pencil marks

PRICE.....$4.00 USA
##

Thanks...73..ROB

We have a ton of stuff that our father collected over the years. We
have divided it into three lots.
All prices are negotiable. Buyer must pick up stuff in suburb of
Chicago. No delivery or shipping.
Will consider splitting it up but would rather make a deal for the
entire lot.

Lot 1

Meters: Approximately 20 analog meters AC/DC volt, amp, milliamp, etc.
Many are Weston and still in original boxes.
1 Jewell Galvanometer
Several Simpson voltmeters (different ranges) - no probes included
Meters: 40 miscellaneous analog meters. Many in original boxes
Miscellaneous Electronic parts:
Resistors
Photocells (w/spec sheet)
Vidicon tube
Relays
Tuning capacitor
2 headsets
2 Signal Corps oscillators
2 CB converters
crystals (assorted frequencies)
Antenna relay
misc. knobs
transformers
9 things we couldn't identify
Miscellaneous small parts:
rectifiers, diodes, reflectors, BFOs
more
Coil forms, RF coils
Disc capacitors
Variable condensers, Trimmer condensers

$250.00

Lot 2

Sylvania Signal Generator Type 216 (book included)
Heathkit Impedence Bridge (book included)
Heathkit Q-meter
2 Olsen AM broadcast tuners
RCA low frequency tuner
2 Decade resistance boxes (wood case)
Decade resistance box (metal case)
Wheatstone Bridge (Wood case)
Boonton Q-meter (100amp) Serial#370
Wells Gardner receiver
Crystal controlled Oscilator (Blilet Electric) Model 10
TS32A/TRC-1 Oscillator
Pocketscope S-14-A
Heathkit Oscilloscope
Vacuum tube voltmeter - General Radio Type 726-A Serial#759
General Radio Impedence Bridge 650A Serial #1952
2 Zenith tuners
Knight preamp
Tuner DB22A
Variable Air condenser (wood)
Low frequency tuner (RCA)
Precision wavemeter

$250.00

Lot 3

Aircraft tp aircraft radio direction finder
Shortwave receiver
Navy Panoramic Adapter BC1032-A
Hammerlund Superpro receiver with power supply
2 Navy Receivers Collins type COL-46159
ABS-3 Navy Receiver
Navy radio receiver CEX-46152
Signal Corps Amp alignment test unit
Navy Microfilm projector

$250.00

Bring a van and take it all, will make a great deal for everything.

Hello -

Looking for a manual (or copy) for a Motorola (by Measurements Corporation) model S-1320 RF Signal Generator. 1970's vintage RF Sig Gen, solid state, used primarily in the commercial radio trade.

Will pay any and all costs to get the manual for my ham-fest treasure!

Thanks for reading this.

4936. HAL DSK-3100 for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-08 00:00:00 UTC
From: jangus@netcom.com
Message-ID: <jangusEBH86M.G8C@netcom.com>
Source record: 119153

This is the dual disk drive unit for the terminal unit.
Good physical condition. Unknown electrical condition, except
that it didn't set fire to itself when I plugged it in.
No manual, no boot disks.

Make offer. I'd hate to pitch it in the trash after "storing"
it for several years. It's heavy, plan on $20-30 worth of UPS
shipping charges.

I agree with you, John. But E.P.A. rules! It is even illegal
for anyone but a licensed carrier to transport PCBs and then only
if destined for a licensed incinerator. EPA is not _net_ police.
My comments are based upon what I know firsthand in such legal
disposal. The costs of such are preposterous.

Personally, I would not be afraid at all to use these
high quality caps providing there are no leaks. Some of the oldie
cans are getting corroded, etc. due to normal aging.

I'm about done restoring a HBR-16 homebrew RX (Oct '59 QST).
I'd like to find another homebrew RX to play with when this is done.

HBR-14 (predecessor to HBR-16 would be nice but I'm game for anything:
Scratch built, Plans built, tube, solid state, dead or alive.
Even cardboard boxes full of parts or half completed or 'never could
get the darn thing to work'. Don't be embarrased. I'll only say good
things about it. Or, tell me you got it from a 'friend' :-)

For Sale:

Jewell Standard Ammeter made by Jewell Electrical Instrument Company, Chicago. Large brass case (6 in dia) mounted on bakelite base with large binding posts on sides. Measures 0-15 amps and 0-1.5 amps in two ranges on hand lettered scale. Very nice mechanical movement. Says "Pat. Aug 29, 1899" and "#1346" on dial. Apparently once owned by the University of Utah.

I usually don't ask for best offers, but I have no idea what it's worth. Let me know what you think it's worth and I'll consider it. I'd appreciate someone knowledgeable in old meters to give me some info on it.

tnx,

4950. Re: tube socket savers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-08 00:00:00 UTC
From: Joe Fitter BV/N0IAT <joentam@transend.com.tw>
Message-ID: <339A778E.268B@transend.com.tw>
Source record: 119167

Hi Claude,
A "socket saver" is a passive device used in conjunction with vaccuum tubes to prevent wear and tear on the original equipment tube socket. The "socket saver" plugs into the tube socket of the equipment. Then, the tube is plugged into the socket saver. Frequent replacement of tubes can loosen the "grip" of the tube sockets. Using a socket saver, the tube can be removed/replaced without risk of damage to the original tube socket.

These were common, especially in the 7 and 9 pin varieties. I use them with my tube tester to reduce wear and tear since these sockets see frequent use.

Scott Radio Laboratories was left with a quantity of unused entertainment receiver assemblies and parts when their military contract was terminated at the end of WWII. The company manufactured the SLRM to get a civilian and commercial product on the market quickly and to use the "surplus" military components. They were purchased by returning military personel (who listened to the Scott entertainment sets on ships), radio amateurs and commercial businesses (primarily fishing and shipping companies).

Joe, Have you looked these over to be sure you are not selling anything that contains PCBs (polychlorinated biphenyls) such as Pyranol or Askarel that used to be popular in capacitors and transformers. Because PCBs are regarded as carcinogens, their handling, possible leakage, and legal disposal are a concern. If the capacitors were to contain PCBs, it may even be illegal to sell them. --Don WN9V

Ridiculous.
If they are PCB filled, don't burn them and inhale the fumes
(which would contain Dioxin... whis is the hazard from PCB's, I
believe) ... otherwise they're safe to use....and were for many many
years without the sky falling.
The net police venture far and wide...

PHOTO PHOENIX INTERNATIONAL

We are an international New York based agency representing amateur and professional photographers in the following areas: Galleries, Business and Organizations, Book Publishers, Paper Products, Consumer Publication, Newspapers & Newsletters Publication, Special Interest Publication, and Trade Publication.
We are seeking photographers who strive for excellence in the aesthetic/ creative and technological world of images, who have the talent to capture the setting and to convey the mood. Your work should reflect a genuine, pervasive interest in photography as a fine art.
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, please submit a query letter, direct mail flier/brochure, tearsheets, slides, photographs & SASE.
For amateur photographers, send sample photos and/or slides.
TO ALL: Do not send entire portfolio unless we ask for it. If we are not interested, you might not hear from us, so please submit material that does not need to be returned.

Send to:

Hi Gang,

I'm thinking of buyin a Nye-Viking straight key. Anybody got any idea what a fair price would be? I don't know much about the key, except that it's in excellent condition, seems well made. the contacts are concealed in the base, with the lever arm pushing on a little rod that actuates the mechanism.

73,

Jim W8ZR

Hi Mates,

I noticed with some dissapointment that the Boat Anchor
FMT was not well supported. I missed it as well due to family
and honey dues. Perhaps if the AM contingent got into the
process we could have our cake and eat it as well.
I like the idea of restricting the measurement mechanism to
tube type test equipment and the BC221/LM XX and other variations on
those themes makes for a lot of fun. I would propose that perhaps the
blokes who frequent the AM sectors of the phone bands act as the
primary source and at specifit times and days those folks who want to
do an FMT could do so in real time while the AM signal source just
chatted along. I am sure there are a few of the AM dudes who have
synthesized signal sources locked to either cesium or rubidium sources
or even a well disciplined crystal standard that would be happy to strut
their stuff as the source signal.
Give it some thought folks. I would enjoy the FMT on a more
frequent basis and it would also help me rationalize my collection of
221s, LMs, and my pride and joy Lavoie LA70.

What say all?

If it's cosmetically clean and all of the original knobs and such are intact, it was a steal at that price... nice catch!

I think that the "E"s were made around the late '50s to early '60s or so. They came in grey hammertone, blue, mahogany, and blond finishes (not completely sure about the grey, though).

The switches and controls can be cleaned as you've indicated. The slide switches will probably need more than just spray cleaning, though. If you're real careful, you can pull back those tabs holding the phenolic bottom in place, and drop the sliders and rails out to clean manually (a coarse pencil eraser stick or a Q-tip soaked in solvent should work)... those contacts are basically open, and they usually get oxidized with a heavy black coating that spray cleaner will not penetrate on its own. The volume controls usually just get dust mixed into the track lubricant, and the cleaner will usually take care of that if the track itself is worn out (in which case the control will have to be replaced). Note also that the rotational feel of the volume control may change slightly after cleaning; sometimes the lube also acts as a dampener to smooth out the feel a bit. If possible, you might want to try and remove the control and switches for cleaning, in order to avoid getting that lube all over the inside of the chassis (not a fun clean-up job, that). The control will dismount, but the switches may be riveted in place.

You might also want to get a set of NOS tubes for it; Antique Electronic Supply has them fairly inexpensive, and they replace bad ones shipped out for free, no questions asked (I *really* like them because of this).

The alignment probably just needs some touching up. You can peak the IF on a local MW station (best would be a weaker regional or local station with a consistent daytime signal),

and tweak the trimmers to track the dial pointer properly for all four bands. The fourth band will be the toughest, as reception here (12-30MHz or so) is kind of dicey to begin with, and a lot of "All-American 5" (i.e. 12BA6, 12BE6, 12AV6, 50C5, 35W4) superhets such as the S-38 tend to lose a bit of sensitivity in this range, as stuff like stray capacitances and inductances and inherent tube limitations begin to take effect. You should be able to get it pretty close with one evening's worth of effort, though, and not have to ever mess with it again unless RF/IF tubes are changed.

As long as you've got the cover off, it's worthwhile to clean the inside of the dial glass and such as well. Gives the radio a bit of a facelift, and rejuvenates its appearance.

> Any tidbits about this item appreciated. Realize this is a
> pretty mundane item among you BA fans. Just dropped by for
> a little info.

Where can I get a Boatanchor ?
Epilog

Credit - Rick Stealey K2XT got rec.radio.amateur.boatanchors created
as an official newsgroup. The original boatanchors e-mail list was
created by Jim Lockwood KM6NK, and is currently managed by
Jack Hill W4KH -- its high signal-to-noise ratio should be
an inspiration.

Much of this FAQ was put together by John Brewer WB5OAU/4 for
the original boatanchors e-mail list. Other info has been gathered from
various sources by Michael Crestohl W1RC and Nick England KD4CPL.
A big Thank You to all who have contributed !

Disclaimer - While we believe this info is reasonably correct, all
responsibility for use of this info is yours, not ours.
BE CAREFUL - Boatanchors are heavy and contain lethal voltages !!

Why Boatanchors ?

Some may question the desire for 80 pound receivers and
100 pound transmitters, both with filaments sitting there
getting hot and wasting power in this day of microprocessor
based, mega-memoried miniaturized transceivers! Although
modern radios are extremely good at what they are designed
to do, they are about as interesting to operate as a
toaster oven. They have no soul.

Additionally, many find a zen-like feeling in taking an
old, misused ratty old radio and carefully restoring it
back to health. Like cars of the era, boatanchor radios
were made to be worked on, modified, and tinkered with.
Many think of it as Real Radio in this era where fixing
a transceiver is accomplished by boxing it up to send to
the manufacturer for a custom VLSI chip replacement.
Indeed, a warm soldering iron is almost a requirement
for operating a vintage station.

Others claim that boatanchors SOUND better than their
silicon descendents, and this is generally true. The
audio from a Hammarlund or National receiver, or a
Johnson transmitter can sound much better than the
300mW audio coming out of the 2" speaker in the
typical transceiver.

Watching the flicker of 807 modulators in a Viking I
as you speak into a D104 mic, is certainly more stirring
on a winter night than considering hole and electron
flow.

If truth be known, much, if not all of the above, although
true, are merely justification for the insatiable hunt
for more and more of these old boxes, simply because they
are just too NEAT to have and operate!

What are Boatanchors?

Big. Heavy. Old. Fun.
"Boatanchor" is a fond term for vintage tube-type ham radio and
communications gear. Manufacturers like Hallicrafters,
Hammarlund, National, Johnson, RME, Heath, Collins, etc.
made this gear roughly through the mid 1960's. Also included is
tube-type military radio gear, homebrew gear, station accessories
like microphones and keys, and test equipment of that period.

What is this newsgroup for?

The polite discussion of boatanchor related topics:

Restoration, Repair, Operation, Collecting, Historical info,
Parts sources, Legends and Lore, Vintage operations,
Vintage station accessories (keys, mikes, etc.)
Boatanchor ONLY buy/sell/swap

Who is welcome here ?

ANYONE interested in Boatanchors.
Hams, Non-hams, SWLs, military surplus fans, etc.
Newcomers, old-timers, thrill-seekers.
Men, Women, Boys, and Girls of all ages.
Commercial posters sticking to boatanchor topics

What is this newsgroup NOT for?

Newer equipment (use rec.radio.amateur.equipment)
Vintage broadcast and phono gear (use rec.antiques.radio+phono)
Vintage audio gear (use rec.audio.tubes)
Vintage solid-state gear (try the VSS list -
Send e-mail to listserv@fablotz.min.net.
Put "subscribe vss" in the message body)
Homebrewing with modern technology (use rec.radio.homebrew)
Non-boatanchor buy/sell/swap posts (use rec.radio.swap)
Antennas (use rec.radio.amateur.antennas)
General ham info (use rec.radio.amateur.misc)
Code vs No-Code (use rec.radio.amateur.policy)
Flames (use alt.flame)

Where can I find out more about Boatanchors?

---
1. RCA Receiving Tube Manuals. I have several editions in my library because older tubes were deleted and newer ones added between editions. I won't list all the tube manuals in my library but they are spaced out over three-four year intervals. The latest one I have is RC-25 which is dated 1966 and has 607 pages. Availability: Hamfests & shows $5.00 to $15.00

2. RCA Transmitting Tube Manual - 1962, 320 pages includes the lineup of transmitting tubes including the venerable 807, 6146, 811A, etc. Availability: scarcer than the Receiving Tube manuals but I've seen them around - $5 - 15.00

I believe both these manuals have been reprinted and are sold by AES in Tempe AZ.

While on the subject of tubes....

3. Tube Lore, Ludwell Sibley 1996 ISBN: 0-9654683-0-5 $19.95 available from author (Flemington NJ 08822). 186 pages. Excellent reference source on the subject written for collectors and vintage radio buffs. Features cross-reference on tube types and general essays on tubes.

4. Elements of Radio, (William) Marcus & (Abraham) Marcus. 3rd Ed. 1953 771 pages. Prentice-Hall Library of Congress Catalog No. 53-8544

A classic text that focuses on radio receiving theory. Very well written and presented. Good first text on BA technology. Availability: Should be easy to find at any vintage/antique radio show - $5 - $20.00

5. Radio Servicing - Theory and Practise, (Abraham) Marcus, 1954, 794 pages, Prentice-Hall. Library of Congress catalog number 53-9729. A good second text that follows on Elements of Radio. Quite thorough in its coverage. Availability: same as Elements of Radio.

6. Elements of Radio Servicing 2nd Ed. (William) Marcus and Levy, 1964, 566 pages. McGraw-Hill Library of Congress catalog number 54-9698. Its very interesting that the "other" Marcus collaborated with another author to write a similar book. As with Radio Servicing - Theory and Practise it is focused on radio receivers with emphasis on broadcast radio repair and troubleshooting. Availability: same as Elements of Radio.

Here are four US Army TMs that I think are really good for learning about Boatanchor technology: I found these to be of particular help when learning about this stuff back in the 1960s.

TM11-4000 - Troubleshooting and Repair of Radio Equipment. April 1958, 177 pages. R-390 enthusiasts will especially want to get this book if they can as it uses that receiver as the "sample", although not actually identified as such. As it was written for soldiers it is clearly presented and covers receivers and transmitters. One of my favorite texts.

TM11-662 - Basic Theory and Application of Electron Tubes. February 1952. 215 pages.

TM11-664 - Theory and Use of Electronic Test Equipment. February 1952. 158 pages. Covers meters, tube testers, signal generators, etc. One of the neat things I like about this book is it details the venerable mil surplus test gear like the URM-25D, TV-7(*) and other equipment of the era. Very important book for any BA fan.

TM11-665 - CW and AM Transmitters and Receivers, Spetember 1952, 274 pages. Another essential book to have. Title is self-explanatory. Another personal favorite.

On availability: These may be found for a few dollars at flea markets and vintage shows if you're very lucky. They are otherwise hard to find. I don't know if they are available through NTIS. I've seen them go for $15.00 to $20.00 a copy. They're well worth it.

There are other military TMs that teach DC, AC theory, antenna/propagation, power supplies, etc in this series but I have omitted them because they are really generic and not Boatanchor-specific. However, if the editor feels they should be included I will be glad to provide a description of them. The Navy also has an excellent set of manuals that accomplish the same purpose and are quite excellent as are all Navy technical manuals.

Finally, there's Fundamentals of Single Sideband published in 1959 by
Collins Radio Company. This book is quite technical and detailed on
the subject written by the engineers who designed and developed SSB.
There is not a picture of any of their amateur line in the book although
the theory certainly applies to any filter-generated SSB transmitter.
Its about 200 pages with lots of charts and diagrams. Availability is
very scarce and I've seen them priced from $50.00 and up. I believe there
was a reprint in the 1970s and these may be found at a much lower price.
The original is a large paperbound book with bright yellow covers.

The titles above only represent a portion of my radio library and I have
selected them as my favorite books of interest to Boatanchor enthusiasts.
I have several other titles from the 1940s and earlier but did not list these
as I do not feel they meet the criteria for this purpose, ie: the
technology is pre-BA and falls more into the realm of antique equioment.

Copyrighted 1997 by Michael Crestohl. Permission to reprint granted
provided credit is given.

Where do I find Boatanchors on the air ?

HF AM hangouts - 1885, 1995, 3885, 7295 KHz (East Coast of US)
1925, 3870, 7295 KHz (West Coast of US)
14.286, 21.40-21.45, 29.0-29.2 MHz

HF CW hangouts - lots of places, particulary 3579.545 KHz

How can I practice Safe Boatanchoring ?

This is a genuine concern! Boatanchors have Real Voltage
present in them! Lethal voltages. You will find that
capacitors really DO store charge! None of this wimpy
12 volt stuff!

Get back in the habit of discharging any capacitors that
are lurking under the hood. Keep one hand in your pocket
when working on a hot radio. Be REAL careful and THINK THINK

THINK before twiddling with a boatanchor that must be
powered up and worked on.

It is SO easy to get used to working on solid state equipment
and not worrying about Real Voltages... don't do this!

Also, many older radios are not fused... receivers are good
examples of these. I generally replace the line cord
(they usually need it anyway) and either put an in-line
fuseholder, or some of the Heath-type fused plugs in the
radio. Better still, replace the 2-wire plugs with a more
modern 3 wire plug. Barring that, ensure that you strap
every cabinet with healthy sized cable, to a common
station ground. This will prevent _you_ from becoming the
cable between two pieces of gear at different cabinet potentials.

Fires are nice to have burning on winter evenings
but not when they are on top of your operating desk.

Speaking of operating desks, you will become good at carpentry
if you spend much time as a boatanchor operator. You will
quickly discover that the table you used to operate your
tranceiver is way too small, and waaayyyy too wimpy to support
a growing boatanchor station!

How do I restore a Boatanchor ?

This subject could easily fill many pages.
There is a lot of really good info from Hank Van Cleef in the
rec.antique.radio+phono FAQ:

http://www.cis.ohio-state.edu/hypertext/
faq/usenet/antiques/radio+phono/faq/top.html
ftp://rtfm.mit.edu/pub/usenet/
rec.antiques.radio+phono/

Below are just some common topics.
The newsgroup is a good place to ask about other issues.
Remember the radio that stares at you from
your bench is old. There are not many around. Take that into
consideration as you proceed through the process. If you
erase the dial marking on your receiver by cleaning it
with Windex, you likely will not find another at Radio Shack.
Take your time and enjoy. The journey to a working boatanchor,
like life, is the _point_ not a process. You will say less
nasty words if you take your time.

Some general restoration tips:

* Check fuses before powerup. Many 'anchors will have the
wrong value fuse in it. Checking the fuse before purchase

is a good thing to do too. If it's open, you at least know
what you are getting into.

* Check the resistance from power line to chassis before
powerup. Most boatanchors have bypass capacitors from the AC lines to
chassis and these sometime have deteriorated. Replace with caps made
for AC line bypass applications (available from Digi-Key, etc.)

* Power up old radios gently. Plugging it into the wall and
turning it on is not gentle! Bringing it up slowly to operating
voltage with a Variac so that electrolytics can "form"
is gentle.

* Don't trust that the tubes that are in the sockets are the
correct tubes. Check them against the schematic. If you
don't have a manual (and even if you do) note which socket
the tube came from so that you can replace them correctly.

* Don't clean tubes with water. The marking on the glass
will likely come off with one good swipe of a water dampened
cloth.

* Assume many electrolytic and paper caps are bad. Check them.
Paper caps should read "infinite" ohms on your ohmmeter.
Electrolytics should read a very high value after settling.
Paralleling a known good electrolytic is often a good way to
check an electrolytic.

* Check high resistance, and high wattage resistors for
correct value.

* Nifty tools to have are flux brushes, for cleaning nooks
and crannys. Windex is nice for cleaning chassis.
Qtips are good to have too.

* NEVER clean dial markers or drums. If you do, assume that
they will wipe away never to be seen again. You WILL say
bad words if this happens!

* WD40 or Scotts Liquid Gold (my favorite) applied to a clean
wrinkle finish will do a great job of restoring the lustre.
Works well for knobs too!

* Never use WD40 or Scotts Liquid Gold on anything until you
have tried it on a non-visible part of the cabinet to make
sure it won't dissolve anything.

* It is a poor job that doesn't require at least one new tool !
From Ed Zeanski-
- adjustable knurl wrench for removing knurled toggle switch
nuts -
Techni-Tool Phone 215-825-4990
5 Apollo Rd, Box368 sales 941-2400
Plymouth Meeting, PA fax 828-5623

19462

These folks listed 2 adjustable knurl wrenches, 1/2" and 5/8",
for $13.20 ea. My catalog is a year old so the price might
have changed. The collet in each allows 1/16 adj to allow for
finish thickness. Brand is listed as "Knurl-Tite",
stock# 388WR014 for the 1/2" and #388WR016 for the 5/8".

Aren't tubes and parts impossible to find ?

Nope - there are lots of tube dealers attending hamfests and
antique radio swap meets, and selling via mail order. Besides,
there are lots of 50 year old tubes out there working just
fine.

Fortunately, hams are notorious packrats and parts suprisingly
abound, for old gear, particularly at hamfests (and in the
boxes under the table as mentioned earlier). Word of mouth
once again will work wonders at getting tubes, high voltage
caps, and the like shoved in your direction. Beware that this
is an addiction, and boatanchor radios, parts, and periodicals
will soon overrun all available space. Trust me.

Where can I get tubes and other parts?

What type of Boatanchor should I get?

This is a question that has as many answers as there are
individuals. Generally, as a "starter" boatanchor, 50's
vintage gear is probably the best way to go. Radios in
this era are quite desirable, but often times won't require
extensive surgery to get repaired and on the air.
A radio from a well-known manufacturer is also a good
choice... for receivers, look for Collins, Hammarlund,
Hallicrafters, and National are all good radios. In the
transmitter space, Collins, E.F. Johnson, and Heathkit (with
certain reservations) will do well.

Transmitters with plate modulated AM are the more desirable
units. Prices will generally reflect this.

Good "starter" transmitters include, but are not limited to:

Johnson: Ranger I or II/Viking I or II/ Valiant/500
Collins: Any 32V series.
Heath: Apache, DX100A or B
(my AM bias is showing!)

"starter" receivers include:

National 183/183D, HRO60 and MANY others
Hallicrafters: Many SX series.
Hammarlund: HQ129, HQ150/160/170/180, Super Pro series, many
others.
Collins: any 75A series.

By "starter" radio, I do not mean to indicate the cheapest! Most
of these radios would also be on the "best" list. I selected
these as they _are_ some of the best, and when one is starting
anything, it is good to get the BEST stuff available, rather
than getting junk and getting discouraged with it. There will
be enough to learn (or remember!) without having to compensate
for marginal equipment (was that 'Peak the plate and dip the
grid, or the other way around??')! Any radio from this list
will do the job for some time, and make operating a pleasure.

Where can I find Boatanchors for sale?

The best way to find a boatanchor is to let other hams in
your area know you are interested in them. Often times
I have been given a boatanchor, because the former owner
has relegated it to the garage or basement. This is also
the cheapest method. When attending a hamfest, ask some
of the sellers if they have any for sale. Often times
sellers won't bring such stuff, as it is HEAVY and is
perceived as not being sellable. Look under the tables,

and in the back of the sellers displays for them! While
you are under the tables rummage thru the boxes of parts
found under there for parts that will come in handy restoring
your new-old treasure. Tubes, high voltage caps, vintage
microphones and connectors may be found lurking here!

If you are in a hurry (and have money) ads in Electric
Radio magazine, the Ham Trader Yellow Sheets,
or your local packet BBS are good places to look. Expect to
pay more through these outlets. Also expect to become an
expert in UPS shipping rules. Boatanchors are heavy, and
often the cost of shipping one can exceed the cost of the
entire unit.

EPILOG

Don't look as boatanchors as an investment. Get a really grimy
specimen and clean and fix it, and coax it back to life. Turn
it on with the rest of the room lights turned off. As it warms
up look into the insides and see the orange glow from the filaments
and the purple fire from the 866's. Watch the giant S-meter
come to life, and the dials emit that soft light, framed
by your carefully cleaned and waxed cabinet. Rotate the
knobs that are of sufficient size and layout to permit
easy, flywheel smooth adjustment.

Maybe tune to the BBC on your NC-183.... watch the S-meter
climb as the full audio comes out from the 6 watt output stage
as you crank back the RF gain. Fiddle with a few more knobs
(boatanchor operation does not need to be a passive experience)
to get it set just the way you want it.

Then you'll know why boatanchors are such pleasent
things to own. Like mine, your transceiver may become a
very expensive frequency counter and RF generator used
to align the 'Real Radios'.

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
June 15th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Asking $160 + UPS for radio/speaker/manual

I am posting this for a non-internet connected friend, I will handle transaction.

HQ-100A with clock, S100 speaker (these are rare!), and ORIGINAL manual - Good general coverage reciever with ham band bandspread. Has BFO.

All in good condition. Radio front is excellent, lettering knobs are good. Most tubes are new. Minor scratchs on case, small rust spot on top. Speaker is in good condition,some light scratches on case. Works well.

All plus shipping. Preference given to pick up in San Jose area.

AN/TRC-68 tranceiver covers 225-399 MHz AM. Frequency control is either continuous or from one of 20 front panel programmable presets. Approximately 12W output. Unit operates from 115V 60 Hz and weighs approximately 175 lbs. I have 7 units fresh from overhaul with a variety of accessories including the AN/GRA-6 telephone remote control and large aluminum accessory cases. I would prefer to sell the entire lot together, but will consider offers. Everything for $750, approximately 2000 lbs shipped FOB Rochester, NY. For additional information call or e-mail Ben at Ontario Surplus (716) 265-9096.

Subject: Old TV manufacturing plant: must clean out
Date: 28 May 1997 20:17:02 GMT
From: pschwal@orion.it.luc.edu (Patty Schwalm)
Organization: Loyola University Chicago
Newsgroups: rec.antiques.radio+phono

Help! My father is selling his factory (formerly a '30's roller
rink that deserves to be restored; you should see the floor!).

He was involved in the early development of TV. He used to
manufacture television receivers in the early '50's, then
specialized in copper wire deflection yokes, degaussers,
and antennas.

The factory is filled with heavy equipment; a machine shop,
wire strippers, machines I don't know the function of. There are
great work benches (heavy metal brackets), tons of metal
desks, file cabinets, etc. Millions of resistors/capacitors
in every size. Bakelite insulators.

Journals (_Proceedings of the Institute of Radio Engineers_)
and manuals dating from the '30's. A set of technical publications
from Sylvania (_Engineering Data Service_ 1957).

Someone must want this stuff. His foreman from another factory
is saving the more generic equipment, so it's mainly the
heavy, obsolete things, that are left. And all those resistors....8-(

Patty

Back when every electronics store sold tubes, I bought some, new, in
boxes, and when I looked at them there was heater material evaporated
on the top of the envelope. Moral: just because they are in a box
doesn't make them new.

Jim Mueller
deadmen@stairnot.com

The stated return address is incorrect to reduce the amount of junk e-mail I
receive. To get the valid return address, replace "deadmen" with "dadoman"
and "stairnot" with "azstarnet".

Just to point out the obvious, be careful if you try this unit. The
tape contacts and binding posts are likely connected to the AC line.
Use an isolation transformer.

Hi gang,
I've managed to smoke the modulation transformer in my Johnson Ranger. It died this afternoon right at the end of a long AM QSO on 40m. Does anyone know where I can buy a replacement? Anyone got a junker Ranger? Is there another transformer that will work in its place? Any help is appreciated.

Have a entire collection of tubes about 700+ for Collins Gear and
other gear and military gear. Several are new in the box such as ,811's,
812's,814, 572B(new),6146B and numerous others. Also have a Heathkit
tube tester
in suitcase and another tube tester. Also signal generator and scope and
other
old test gear from the 20's-60's. Plugged em in and they come on.
Selling as a package. Their are also 5 boxes of
resistors,caps,parts,dials,
shafts for Collins and other radio gear. Most look unused.
If your interested you may want to call as their is more stuff also and
I can tell you about some of the tubes.

Millen 90800 exciter and modulator ...very good shape $150.00 plus ups

Very nicely homebrew power supply for the above (but heavy) free with the above rigs...just pay UPS or if you only want the PS $25.00 plus UPS

Also lots of AM iron..ie: audio and HV transformers...plus other assorted odds and ends..the big transformers ARE HEAVY, so pick up is preferred or I will ship as long as YOU pay for shipping !!!!

All the iron is reasonabley priced $15.00 to $20.00 per piece plus shipping. It will cost me that much to get packing boxes for those things.

Lets me know what you want...

Unless the bottom of the case is stamped "Hanford" or "TVA" in which case it is indeed a collectors item.

However, collectors seldom live long enough to enjoy it...

Let us know if you can see it in the dark...

Seriously, there is also such a thing as modulation reactor which is a fancy name for modulating transformer to plate modulate transmitters from the 40's and 50's.

But then again,... GE built many nuclear power plants during this time... so they did indeed brought many good things to life...

I have an excellent Dentron UT-2000A antenna tuner. This tuner covers 160 through 10 continuous, and has a 4:1 balun in it to handle ladder line in addition to coax. I also have the original owner's manual. This tuner will handle 3KW.

I would like $130 plus shipping. I will consider trades towards something of interest. 73, George Huston N0GH

5023. FS: MILLEN EXCITER AND MODULATOR

Source record: 119111

I have a Millen 90800 exciter and modulator in good shape. $150.00 plus UPS.

I also have a a homebrew power supply for the above equipment, very nicely constructed in a matching rack setup, but it is very HEAVY!!!

If you want it with the above equipment, all you pay is the shipping... $25.00 plus shipping without the equipment.

If you are local and care to pick up the equipment the price is $125.00 and you can also have all the AM IRON that came with the deal...This includes multiple audio and HV transformers (GE and Stancor) some nice BIG mica caps and other assorted odds and ends.

I am located in CT, near New Haven and very close to all major highways that flow thru the Nutmeg state.

I will also be advertising the AM iron separtely in this news group and rec.radio swap

Its a good deal, so let me know what you need.

Reply via the EMAIL or telephone 203-735-9725 its ur nickel!!!

Hello Everyone,
I am attempting to locate a service manual or schematic for a recently acquired Lafayette HE-80 (Communications Receiver circa 1963-1964). She works, yet the old gal needs a alignment and the Q Multiplier crystal is missing. Any idea of what frequency crystal for the multiplier?? I'll pay copying/postage fees. My address is 24 Hastings Avenue, Oakdale, PA 15071, or call me at 412 765-8403 and please leave a message and we'll hook up. Thank you very much for your time and help.
Good Dx'ing,

>KA8DDZ - hynde@flash.net
>Equipment NorCal 40A, NorCal 38 Special, Dipoles

That's a GREAT idea !! You can start over here. First, go to the Philippines and get all the slims off 40 meters (look up NPA in the dictionary before you go, and bring your 38 special, you'll need it). Then, you can rent a boat and clean up the high seas in Asia, take the radios away from all the Korean fishing boats (loads of 2 meter rigs) on your way to Indonesia, where you won't have any problem finding pirates at all. On the way home, drop by China and get all the 20 meter radios that are being used as part of the new national HF telephone system, then make a quick stop in Hong Kong and take all the 25-30mhz FM rigs away from the cab drivers. You should get enuff radios to fill a couple 40 containers. And don't forget to order your Radio Police Badge from QST before you leave home, so nobody will complain or question you when you take thier radios away.

But I think, maybe, the guy who wrote the original message was speaking of AM pirate BROADCAST stations, and I'm not sure many high school students would be interested in AM rigs because most of them don't have 2 VFO's, 200 memory channels, and built in antenna tuners.....

Two years ago I bought a clock radio of 1950's vintage for
$3. It had a bad Realistic Lifetime guarantee tube in it.
I took the tube to the local RS dealer. He checked his
computer and found they had more in the central depot. He
ordered one drop shipped to me. I turned in the old one.
Got the new one in a few days and it worked fine.

I have a HB regenerative Receiver from the estate sale of
a ham here in Tulsa. I don't know what it is worth. You'd
have to make offer. U-ship.

I don't know what tubes it used. I found a similar but not
the same schematic in an old RCA tube manual, so I believe
that is like where the idea came from.

If interested, I can send you a drawing by snail mail.

Or a xerox of my last pic of the thing.

Or something.

I am looking for a used Phasor or other system for electrically steerable vertical array. Vaguely recall an article in Ham Radio magazine and will appreciate info on which issue if anyone has a better memory than me. I can always relay switch a bunch of transmission line segments but wanted to explore other options before putting anything together. If someone has an old system gathering dust that is available for swap, by all means, write and let me know. Primary interest is for 40m band but 20, 30, and 80 are of interest too.

Wanted: Copy of schematic for Zenith Transoceanic model 3000-1.

I understand that a schematic of this radio is available in Sams Technical Service manual, but I do not have access to these.

Thanks,
Wade

Q Multiplier doesn't use crystal. It is a regenerative type circuit.
The crystal may be for the 100 kC cystal calibrator.

5056. WTB: RACAL 6790 Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-10 00:00:00 UTC
From: Kenneth M Gianino <ken@notify1.com>

Source record: 119144
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I'm looking to keep an old RACAL 6790 HF receiver running into the next millenium and could use some parts. The older 6790 is preferred, but the more common (and more recent) 6790/GM utilizes most of the same components. Let me know what you have. The cheaper the better, so I'm not really interested in functional radios.

5057. FORSALE - National HRO-60 AND Eddystone 770R !!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-10 00:00:00 UTC
From: jpl@qc10.ho.lucent.com
Message-ID: <5nk816$61t@nntpa.cb.lucent.com>
Source record: 119145
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

The Holmdel Amateur Radio Club is selling it's old
HRO-60 and Eddystone 770R Receivers
in order to raise money for new equipment. The
National comes with 10 coil sets (2 A sets, and
1 each of B, C, D, E, F, G, H, and J). Both receivers
power up and produce some audio output (static),
but probably need a bit or work to get them on the air again.
They have sat virtually unused for
probably 2 decades or so! They are cosmetically in
excellent condition. Our club is the original
owner of these rigs. We have the manuals/schematics
for the HRO-60, but haven't been able
to locate them for the Eddystone.

We are opening the sale up to a bidding process.
If you are interested, please send me e-mail or
call 908-949-0664 with your offer (shipping additional --
equipment located in Monmouth County NJ).
We would like to get at least $500 for the pair.

Joe Levantino

Hello all,

I'm looking for the "Radio Amateurs PREFIX MAP of the WORLD" which was once published by Radio Amateur Callbook, Inc.

They told me it's no longer produced, but I would like to find a copy in new, mint, or excellent condition. Also looking for a copy of "The Radio Amatuers DX GUIDE" in similar condition.

Please send me email with price and condition. Thanks.

Doug,

You can probably use a number of modulation transformers in that circuit without much impact. I think that the Ranger uses 7027's to modulate a 6146, so you probably need something on the order of a 50W transformer with an aproximate turns ratio of 1.5 to 1. You can use a higher ratio but your audio power output will start to drop.

Also, I think the Ranger has a dedicated winding off the secondary for negative feedback. You should be able to adjust the circuit to compensate for the loss of this winding if you cannot find a junker transformer.

There is also one other possibility: Repairing the smoked unit. I know some guys who restore antique radios routinely repair old transformers. I'm not saying its easy or very practical, but it may be a last option.

The transformers from Peter W Dahl company seem to be designed for 60 Hz power applications and then adapted for audio. Before I'd buy one, I would have them spec. the performance over the audio range and be sure there were no dominant resonances that may cause problems in the audio

range.

yes, but is is a problem with this transmitter that the QQE06/40
output valve is underrated, so better to use YL1060 or YL1070 which
have 50% higher anode dissipation, but you have to modify the inner
hole in anode connectors, otherwise you should run it only 60W output
on FM

5102. trade Hammarlund HQ-170C for . . .

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-12 00:00:00 UTC
From: Phil Nelson <nospam.philn@accessone.com>
Message-ID: <01bc76fb$c44730c0$5445facc@philn3>
Source record: 119007
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I got a Hammarlund HQ-170C as part of a package and would
consider trading it for a nice older SW receiver or what have
you. (Hey, you're sick of that Hallicrafters SX-43 anyway, right? :-)

This is a 17-tube boatanchor made sometime from 1958 -
1962. Receives ham bands only, 160-6 meter, triple conversion.
On a 10 scale, I'd call it about a 7. Very clean, electronics complete.
A few minor case scratches, some pinpoint rust spots on the cabinet
face. Two of the smaller knobs are not original, and it's missing the
dinky clock knob. (Aren't they all!)

I haven't tried using the set, other than briefly powering up with the
trusty
light bulb tester. The clock goes around, all the tubes light up, and
there's
audio. Not knowing what to listen for on these bands, that's where I left
it.

Seems easily restorable, in other words. I'm just not interested in
a ham receiver. If you can use this guy and have an older radio to
trade (boatanchor or otherwise), drop me a line.

Thanks!

Wow! I see (and have experienced) a lot of bad things about the typical Radio Shacks but I must give them credit for honoring their Lifetime Tube Guarantees. That's really nice. Almost makes up for the other stuff. <grin>

From: rhys@ix.netcom.com
Message-ID: <5nofgf$iaa@dfw-ixnews6.ix.netcom.com>
Source record: 119011

Hi Gang --

Having fallen into an unbelieveable piece of luck and actually found a Sprague Tel-Ohmike, I am selling my recently acquired Heath C-3. It will save you countless hours of troubleshooting when you're working with a leaky bypass or coupling cap that read good in value but leak badly. It actually puts either 25, 150, 250, 350, or 450V (approx.) through the cap and looks for leakage.

I've restored it to better than new cond by replacing most of the caps with modern precision caps. Measures 10pf - 1000uf and power factor on larger elctrolytics with glowing 'magic eye'. It is suprisingly accurate. Photocopy of manual.

$45 + shpg

>DAVE
Does ithave a part number on it?
Is that the B4?

If not, look at the leads. If 2 leads only, then it's
a filter choke. measure the core for wattage and
run a curve on the winding for the inductance.

If 4 leads it is a transformer. you'll probably need
to research the part number on that.

Good luck

I first took Will Lambert's request as a pin straightener. But
you do bring up a good question Claude. I do remember a male to
female adapter, where the male plugs into the tube socket, and
you plug the tube into the adapter's female socket.
This device worked well to protect the heat sensitive phenolic
sockets from prematurely drying out and cracking. I suppose they
were not needed to protect the female pins themselves, since the
number of insertion cycles of a vacuum tube is minimal.

5128. FS: Heathkit catalog set

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-13 00:00:00 UTC
From: Chuck Penson <penson@sci.mus.mn.us>
Message-ID: <33A1615D.2D76@sci.mus.mn.us>
Source record: 118951

At long last I have completed the arduous and very expensive project of converting my collection of Heathkit catalogs to microfiche, and am now prepared to offer copies for sale. The catalogs listed below are included in the set. In addition to these there will be six more that were late arrivals. Sorry, my memory fails me on the specifics of these but they are all in the 60s. 1950 and 1951 are the only years I have never been able to find. These years were probably "flyers" as opposed to "catalogs."

There will be a total of about 130 catalogs, comprising a set of about 230 standard 4 x 6 inch monochrome films. This works out to a little more than 10,000 printed pages.

The sets will sell for $150 shipped. This is a big job and I expect to be able to deliver the sets by the middle of August.

If you are interested in purchasing a set, please send a money order to:
Chuck Penson, WA7ZZE, Box 2414, St.Paul MN, 55102.

If you have any questions, please write or call.
612.221.4510 days
612.822.1186 evenings

Thanks!

PS--Several people have asked me about puting the catalogs on CD ROM. I think that is a wonderful idea--but I will let someone else do it.

List of Heath Catalogs in microfiche set. (6 more pending)

After having used the Web for a couple of years now I am convinced that
lots of information isn't always better than no information at all.

5129. What is it???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-13 00:00:00 UTC
From: "Ron, N7TAW" <rh@pcez.com>
Message-ID: <33A17A76.1FEB@pcez.com>
Source record: 118952

Here is one for you (OK, us) boat anchor afficianados;

I found a big hunk of metal that seems to be in great condition, but I'm not real sure what it is, and it does not show up in any of my catalogs.

It is made by E.F. Johnson, has a built in power supply, a single 8150 tube, and absolutely no external controls.

The part number is 242-159 (labeled on the chassis and on one of the heat sinks), and I think it is an amplifier, but no bandswitching or anything.

Could this be a 10m amp for their messenger series?

Any (good) guesses appreciated, also if anyone has an idea of value, or wants the thing, let me know. It is part of an estate that I'm trying to help out with.

Thanks,

Ron N7TAW

The estate of W5AYC is selling a collection of CQ Magazines that run from 1946 thru 1988. They are wrapped in packages containing all the issues for each year. All are in good condition. The entire group will be sold as a group, no individual magazines or years. The entire group of almost 42 years will be sold for $250 . The magazines will be boxed and shipped if the buyer pays postage.

There is no danger in connecting to the site because one does not have to invoke the executable. It will only be invoked by a browser that is set up to autmomatically invoke any executable and I doubt the paranoid amongst us would allow this on their machines:-) If you want to run. Download, run your virus scan, then invoke. (I saw no problem with the file).

Now about the book. Content wise, it's an excellent book. My mom gave me a copy years ago. Author makes a good argument for retaining the seagoing radio officers position and morse requirement. For Titanic fans, there is some previously unpublished comment by someone who was a working ships radio operator. I recommend for anyone who has an interest in marine radio and life at sea.

5158. Trade: 2 Samson Wireless Mic's for ham gear...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-14 00:00:00 UTC
From: gekko95@ix.netcom.com
Message-ID: <5nsp74$og8@sjx-ixn6.ix.netcom.com>
Source record: 118960
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hi all,

I have 2 Samson 200mhz True Diversity wireless mic systems
for trade. Both are like new, with clip-on lapel microphones
attached to the body packs. Great for churches, schools,
or other sound system applications where you want a clip-on
lapel mic. The True Diversity part means it uses two frequencies
and 'picks' the one with least noise. Both are on different
channel pairs for simulataneous use, and are 200 mhz FM.
Receivers have standard 1/4" TRS jacks for output with a gain
control. Transmitters use a 9v battery. Model 'Stage 22'
Work well with any PA sound system.

I have two complete systems with original box and packing that
are surplus to my needs. New these cost over $400 each. I
would like to trade one or both for BA gear or possibly 2m
or 6m gear for a value of approx. $150 per system. Open
to offers. Cash price $150 each plus shipping.

Thanks.

Dave gekko95@ix.netcom.com

5175. Distributors Wanted NOW!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-14 00:00:00 UTC
From: Tony Scott <summer@laoffices.com>
Message-ID: <5nue5r$84p$9400@cadmium.aware.nl>
Source record: 118977

Hi,

This is a Solicitation Email, we are looking for new TUFF'97 DISTRIBUTORS.
TUFF'97 is a promotional concept for a prospect follow-up system called
"Simple Track". Software designed for Windows 95, 3.11 and NT
machines. (Macintosh users read the NOTE below(*))

Concept:

The TUFF'97 software includes a copy of Simple Track, so you can use this
for your own personal administration (free). However, the TUFF'97 software
is designed to give you BIG TIME credits for just taking the efforts to
PROMOTE it.

How do I get those credits?. Easy, just distribute/promote it. How?
(Give away the software for free, put it on your website/homepage
and let everyone download it. Give it to your friends, attach it by
email etc). With a one time $40.00 (USD) validation code purchase,
YOUR name becomes part of all sofware you sent out to your customers.
When your TUFF'97 software gets validated, all your personal information is
automatically integrated in the software, so everyone knows how to reach
you by phone/fax or email and where to sent the check/money or cash orders.

Basically this is the concept. Offcourse you need the software to grasp
the whole thing. Believe it, there is absolutely no marketing knowledge
required, just ask for the software package, join and start promoting your
own TUFF'97 line. The only thing you DO need is a PC or Mac(*) and Internet.

(*) TUFF'97 is only available for MacOS users running Connectix VirtualPC
or Insignia's Sofwindows 95/3.11. A true MacOS version is not available.

When you're interested in becoming a TUFF'97 distributor and create your own
distribution line, sent a mailto:FiReStArTeR@frodo.com and ask for your
copy of the TUFF software (We'll sent you a download location and install
instructions). This is a serious opportunity, so only serious responses
are processed. If you're not interested, have a nice day.
Best Regards,
Tony Scott

5183. For Sale List

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-14 00:00:00 UTC
From: nuvistor@aol.com
Message-ID: <19970614221900.SAA19170@ladder02.news.aol.com>
Source record: 118985

I currently have for sale several shortwave receivers of the following types:
1- R390A - $225 u-ship
1- R392 - $200 u-ship

I also have quite a bit of Korean War vintage FM equipment covering from 20Mhz to 58Mhz.(Power supplies, receivers, receiver-transmitters, re-transmission units, vehicular mounts etc. for various GRC, VRC, and VRQ configurations. Let me know what you want.
I also have some very new, very pristine examples of some Israeli tactical manpack sets very similar to the U.S. PRC-77. These units are functionally identical exept for a narrower channel spacing of only 25kHz.

If anyone is interested please e-mail to nuvistor@aol.com
I would be interested in trading these items for 2M and 70cm equipment multimode radios, antennas and such. Tell me what you have and I'll tell you what I have.
Here's a mostly complete list of the other stuff I still have.

RT-68 38-54.9Mhz 2W lo 18W hi cont. tuneable $65
RT-67 28-38.9 " " " " " "
$65
RT-66 20-28.9 " " " " " "
$65

PP-112 power supply 24VDC p.s. for above xceivers. Supplies all operating voltages from 24vdc 6.5A input $15

PP-1175A 115vac power supply for above xceivers. Supplies all voltages
req.byRT units as well as auxiliary 6.3vdc & 135vdc out. $85

R-110 receiver 38-54.9Mhz cont.tuneable receiver w/squelch $45
R-109 " 27-38.9Mhz " " " "
$45
R-108 " 20-28.9Mhz " " " "
$45

PP-282 power supply for above receivers(mounts internally) $15

PRC-10 backpack tranceiver .9W 38-54.9mhz tuneable $45
PRC-9 " " " 27-38.9mhz "
$45
PRC-8 " " " 20-27.9mhz "
$45
also the Canadian versions of the backpack radios as well as the American "A" models

PRC-6 Walkie talkie 275mW single channel crystal controlled
as well as the 6 channel Canadian version US
$22.50

Can. $20
also have the channel Alignment Indicators for them if needed

Now for the new stuff. These radios are the functional equivalent of an
American
PRC-77 The frequency range is from 30mhz to 75.975mhz in two bands with
the provision for two mechanical preset freqs.They work with a sub-audible
tone squelch and depending on the individual radio they have a power out
of
1.1W to 2.25W The only functional difference from these radios is the
channel spacing.American units have 50kc spacing, where as these units
have 25kc.
They are made by Tadiran of Israel and are of current manufacture.
The Korean war stuff Iwould call "good condition" (totally complete not
abused
but not operationally checked)wheras the new stuff I'd call "very good to
exellent" (I use the stuff and it works well)

If you need more info or are interested in any of this just let me know.
Maybe we could trade something, who knows...

73

5207. App: 6CD6GA sweep tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-15 00:00:00 UTC
From: bry@mnsinc.com
Message-ID: <33a3c551.277700@news.mnsinc.com>
Source record: 118909
Cross-posted to: rec.radio.amateur.boatanchors,rec.audio.tubes,rec.radio.amateur.homebrew

I have a question regarding 6CD6GA sweep tubes.
The ARRL Handbook listing for them doesn't really tell us much.
No MAXIMUM listings other than Plate Dissipation of 20 watts.
Can someone supply the data on maximum plate voltage & current
please?

I would like to build a 4 tube parallel amplifier using these,
in G-G and wanted to know what is the highest reasonable plate
voltage & current to use. I want to get about 500 watts INPUT
in CW and SSB service.

I know it has been done with 6KD6 tubes per the 1969 HANDBOOK
PP 197-200

They run that at 900V DC and get 1200 watts p.e.p. input, so
if I run these at HALF that it should work. (667 mA anode current)
for a 600 watt DC input, which seems reasonable for ICAS service
with these. THey have dire warnings about not leaving it "key down"
for more than 30 seconds with over 100 mA flowing!

Perhaps I should use 6 of them?!

Now, they suggest the 6LQ6 as a substitute. Let's see...

Well, these both appear to have a slightly higher plate current rating
than my 6CD6es but not by much. Heater currents are about the same
if that is any indication.

Any thoughts..... I know "Don't use sweep tubes" (grin!)

If you want to see how those are typically used, DuKane Corp
made a lot of amplifiers using 6CD6-G/7867...
If I can find the model number for it you can call them for
a copy of the diagram.

BTW, the audio specs are under 7867, those are listed in the
GE tube manual. Same tube, just re-speced as audio output tube.

For trade:

2 Samson Stage 22 wireless microphone systems. 200 Mhz,
True-Diversity (dual frequency), clip-on lapel mic and
body pack transmitter. 1/4" output jack on receiver
to connect to any PA system

Great for churches, clubs, schools, anywhere you have a
PA system and need a pro-quality clip-on microphone. Also
great for camcorder users. Record audio of Bride and Groom
during a wedding, etc.

Excellent condition. Like new with original boxes and
packing. New cost over $400 each.

Sell for $150 each or trade for ham gear (2m, 6m, boatanchors,
Heathkit, whatcha got?)

Plus shipping (or swap shipping for trades)

Email inquiries to Dave gekko95@ix.netcom.com

NEW Kenwood Reflector!!!

Kenwood is a mailing list (reflector) devoted entirely
to equipment manufactured by the Kenwood Communications
Corporation (Amateur Radio Products Group).

* equipment, accessories
* repairs, modifications, enhancements
* questions, discussions, etc
* buy, sell, trade, swap

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe kenwood

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe kenwood

To post items to the reflector, send email as follows:
TO: kenwood@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

HomeBrew is a mailing list (reflector) devoted to amateur radio
and electronics experimentation and construction:

* building kits
* scratch construction
* radios, antennas, widgets
* design
* accessories
* station construction
* digital, analog, uP
* repair, modification, surplus

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe homebrew

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:

BODY: unsubscribe homebrew

To post items to the reflector, send email as follows:
TO: homebrew@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Ham-Books is a mailing list (reflector) devoted to the literature
and periodicals of amateur radio:

* publishers
* magazines
* newsletters
* books
* old and "collector" books
* new book announcements

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe ham-books

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe ham-books

To post items to the reflector, send email as follows:
TO: ham-books@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Ham-Software is a mailing list (reflector) devoted to software
of all types used for amateur radio:

* logging
* propagation prediction
* digital modes
* award tracking
* commercial, shareware, freeware
* electronic design and simulation
* amateur software development

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe ham-software

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:

BODY: unsubscribe ham-software

To post items to the reflector, send email as follows:
TO: ham-software@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Fox_Tango is a mailing list (reflector) devoted entirely
to "vintage" and "classic" equipment manufactured by the
Yaesu Musen Co., Ltd. of Tokyo Japan.

* equipment, accessories
* collecting, restoring, refurbishing
* buy, sell, trade, swap
* repairs, modifications, enhancements
* questions, discussions, etc
* just plain operating old Yaesu stuff

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: subscribe fox_tango

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe fox_tango

To post items to the reflector, send email as follows:
TO: fox_tango@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

Mobile-Portable is a mailing list (reflector) devoted to mobile
and portable operation of amateur radio (QRP and QRO, HF and VHF+):

* rigs, antennas, tuners
* installation
* batteries
* generators
* solar and alternative energy
* camping/RVs/backpacking
* laptop/palmtop computers
* portable packet
* roving and mountain-topping
* GPS, APRS

To be added to the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:

BODY: subscribe mobile-portable

To be deleted from the mailing list, send email as follows:
TO: majordomo@qsl.net
SUBJECT:
BODY: unsubscribe mobile-portable

To post items to the reflector, send email as follows:
TO: mobile-portable@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

BitBucket is a mailing list (reflector) devoted to
specialized amateur radio communication techniques.

-SSTV, ATV, FAX, APT, DSP, QRP, APRS
-Packet, Pactor, GTOR, Clover, AMTOR, RTTY
-R/C, Telemetry, Balloons, Rockets, Robotics
-homebrew, modifications, interfacing, widgets, etc

To subscribe:

BODY: UNSUBSCRIBE bitbucket

As we encourage the free exchange of ideas, if you pay for
email service by the byte you may want to consider carefully
before subscribing.

To submit materials:
TO: bitbucket@qsl.net

If you have questions or need assistance contact: k7on@qsl.net

---

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle
used to catch bits when they fall off the end of a register
during a shift instruction). Discarded, lost, or destroyed data
is said to have `gone to the bit bucket'. On Unix, often used
for /dev/null. Sometimes amplified as `the Great Bit Bucket in
the Sky'.

2. The place where all lost mail and news messages eventually go.
The selection is performed according to Finagle's Law;
important mail is much more likely to end up in the bit bucket

than junk mail, which has an almost 100% probability of getting delivered. Routing to the bit bucket is automatically performed by mail-transfer agents, news systems, and the lower layers of the network.

3. The ideal location for all unwanted mail responses: "Flames about this article to the bit bucket." Such a request is guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bitbucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

Hello radio amateur freak

I have a Kenwood TS-570D HF tranceiver and like to use it in combination with a transverter for going SSB on 144MHz.

My home build transverter want an input signal of max. 100mW for transmitting but my TS-570D deliver min. 5000 mW (5W).

Do you know if it is possible to reduce the output signal of the TS-570D transceiver to 100mW - by push any buttons on startup or something like that?

What else can I do - 34 dB attenuation is quite a lot.

Yours faithfully

OZ2BKK /Bjarke

If you need diagrams for these, the DuKane Corp, has helped me in the
past. Phone number iis 630-584-2300..ask for parts dept.

If, by any stroke of luck the have any manuals for those, that will
give you pretty complete specs on them.

The socket savers I so jealously hoard are to protect the sockets on
my tube tester and rejuv blaster, and I feel the insertion cycles ARE
sufficient to justify socket savers.

Years ago with AB1 amps and 100W exciters we used swamping networks.
Use a chassis box putting Coax connectors on each side and a large
group of resistors to cut the power. We went from 100W to less than 1
watt (reduction of 100). Description was in the W6SAI ands RSGB
handbooks.

SPEED-X has a long and illustrious history. Les Logan started the
company in the 30s and produced many, many bugs. Logan sold out to
E.F.Johnson in 47. Johson re-tooled some of the models but kept others
intact. Johnson sold the SPEED-X line to Wm. Nye in the early 70s. Nye
continued to make the hand keys but did not make the bugs.
The 520 that you have probably dates 1960 or earlier. For more
information on old keys and bugs, see my web page shown below.

It seems that I heard of a way of using a 9 volt battery and pot to put
a negative voltage on a pin on the back of a Kenwood 140 to reduce the
voltage all the way down to zero, to use a tranverter. I'll look for the
notes on it. 73 Mark

Bjarke wrote:
> What else can I do - 34 dB attenuation is quite a lot.

Hi Bjarke, you can build an attenuator. My ARRL Handbook has 50 ohm pi and 'T' attenuators ranging from 1 to 60dB. Also, your dB calculation seems to be for voltage yet you gave the requirements in watts. 10*log 5000/100 gives me 17dB. For 5w in and 0.1w out, the two parallel resistors in a pi attenuator should be 66.4 ohms and the series one should be 173.4 ohms, non-inductive. The first parallel one needs to have a 5w rating. Five 330 ohm 2w carbon resistors should do the trick.

This winged emblem receiver is a strong CCA very good, with a near mint front panel. The main tuning knob has several scratches and could use a replacement metal insert, and the main dial needs cleaning. Cabinet and trim ring have no dings, a few small paint scratches, and one small sign of touchup. Chassis is very clean, and the radio functions very good.

No optional filters, but comes with a copy of the manual. $400. plus shipping from San Diego

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle
used to catch bits when they fall off the end of a register
during a shift instruction). Discarded, lost, or destroyed data
is said to have `gone to the bit bucket'. On Unix, often used
for /dev/null. Sometimes amplified as `the Great Bit Bucket in
the Sky'.

2. The place where all lost mail and news messages eventually go.
The selection is performed according to Finagle's Law;
important mail is much more likely to end up in the bit bucket
than junk mail, which has an almost 100% probability of getting
delivered. Routing to the bit bucket is automatically performed
by mail-transfer agents, news systems, and the lower layers of
the network.

3. The ideal location for all unwanted mail responses: "Flames
about this article to the bit bucket." Such a request is
guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those
figures last week; they must have landed in the bitbucket." Compare
black hole.

This term is used purely in jest. It is based on the fanciful
notion that bits are objects that are not destroyed but only
misplaced. This appears to have been a mutation of an earlier
term `bit box', about which the same legend was current; old-
time hackers also report that trainees used to be told that
when the CPU stored bits into memory it was actually pulling
them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of
the `parity preservation law', the number of 1 bits that go to
the bit bucket must equal the number of 0 bits. Any imbalance
results in bits filling up the bit bucket. A qualified computer
technician can empty a full bit bucket as part of scheduled
maintenance.

It's a little late!
The fight was held over the last 20 years.
As a sea-going Radio-Electronics Officer, I've no desire to see CW die. However, the ITU and other international organizations have sealed its fate with the implementation of GMDSS (Global Maritime Distress Safety System) in 1999.

GMDSS is already operating and has massive problems
(like a 90 % plus false distress alarm rate). However, the situation is one of politics and cost savings and no one is going to turn the clock back.

CW may still stagger on for a few more years but only in third world areas and merchant fleets that take exceptions to the treaty.

Doug

Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I got a big response from rec.antiques.radio+phono, and
apparently someone cross-posted to rec.radio.amateur.boatanchors.
I'll do the same.[What's a boatanchor?].

I talked to my father again, and here's what's happening.
AFAIK, all that's left are resistors and capacitors, but
there's lots of debris. There are *some* small TV tubes.
Testers (22 square inches, does that make sense?). Dad
is being a bit strange about them; he says they have a
poisonous component. The ieee journals are still there.

He has an ad in the _Chicago Tribune_ Sun. ed.(Jun. 15, 1997)
in the Business Auction Mart (small ad, "Factory Closeout")
They are having another sale this weekend , Jun. 20/21
(10 AM). Only two people showed up for the first (advertised
in local papers) looking for antique furniture. I'm not sure if
I'm allowed to post the ad. Yoke components include thermisters,
magnets, and fasteners, in addition to what I've already listed.
Everything will be cheap.

Tel Labs is in Wauconda, IL (333 Mill Street; center
of town). There is a skeleton crew working business hours.
Their number is listed in the ad, but for *real* information,
call my dad at his other company, Schwalm Electronics.
Tell him Patty sent you. The number is 847-831-2600.
His name is Walter Schwalm.

There is a wonderful thing that I believe is a test signal
generator. It's a metal cabinet about 8' high, with
tubes in it. Dad is rather vague, but I *think* it was
used to generate test patterns on TV. Dad used to
rent a tower to broadcast to the handful of other
people in the area with TV's. I *hope* his plant foreman
salvaged this and moved it.

Help me get this stuff in the right hands!
Patty

Hi All;
I would appreachiate if some one can let me knoiw the fair market value of the MC-4 Drake moblie console, It is kinda rare and contains an oval speaker and watt meter w/reverse and forward positions! Its in exc. condx but the previous owner decided to bend the mounting tabs from vertical to horizontal so to mount under something. It can be reversed, though!
Thanks es 73.....RICH RLUCCH2098@aol.com

5324. EARN MONEY EASILY !!! (For Smart Guy/Gal)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-19 00:00:00 UTC
From: james@nowhere.com
Message-ID: <james-1906971701470001@ip-52-41.dialup.hkstar.com>
Source record: 118826
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment

Please spend a minute to read this, you may get a few thousands US dollars at least. It really works to anyone who follow those simple instructions. The guy who set up this is a smart guy, but who believe this and follow all is the smartest.

If you are a very smart guy or gal, please spend 5 more minutes to read the rest. Think very carefully and excute. My friend, a lot of money will flow into your pocket very soon.

- James

The original news I have received :

This is the fairest, most honest way I have seen to share in the wealth of the world!

Take five minutes to read this and it WILL change your life. If you want to know how to make thousands of dollars quickly, legally and with NO CATCH, then keep reading.

The Internet has grown tremendously. It doubles in size every 4 months. Think about it. You see those 'Make Money Fast' post more and more. That's ... because it WORKS! So I thought, all those users might make it work. And I decided to try it out a few months ago. Besides, what's $5.00, I spend more than that in the morning on my way to work on coffee and cigarettes for the day. So I sent in my money and posted.

A lot of users will join in and make it work for you.

Well, two weeks later, I began receiving money in the mail! I couldn't believe it! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM! By the end of the fourth week, I had received nearly $47,000.00. It came from all over the world. Every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still have enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own. Not a big chance, I admit--but one with incredible potential, because $5

is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP (1)
Invest your $5 by writing your name and address on five separate pieces of paper along with the words: "Please add me to your mailing list." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill inside each paper, and mail them to the following five addresses:

1) S. Hogan
36 Prenton Lane
Prenton, Wirral
Merseyside, L42 8LB
England, Europe

2) J. Larsen
Grinnekaerrsvaegen 50
436 56 Hovas
Sweden, Europe

3) C. Mason
473 44th Ct. NW
Rochester
MN 55901-6666

4) H. Reichel
Hahnenstrasse 8
30167 Hannover
Germany, Europe

5) J. Yung
Flat C, 6/F., Tower 2,
Kornville, 38 Yau Man St.,
Quarry Bay,
Hong Kong.

STEP (2)
Now remove the #1 name from the list, and move the other names up. This way, #5 becomes #4 and so on. Put your name in as the fifth one on the list.

STEP (3)
Post the article to at least 200 news groups. There are at least 20000 news groups at any give moment in time. The more groups you post to, the more people will see your article and send you cash! It's recommended that you do AT LEAST 200 news groups for a lot of people to read it!

STEP (4)
You are now in business for yourself, and should start seeing

returns within 7 to 14 days. Remember, the Internet is new and
huge. There's no way you can lose.

****

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, that's right, only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings.
On average then, 50 people will send you $1.00 with your name
at #4 ... $50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people =$500.

They make 250 postings each with your name at #2 =100,000
postings =5000 returns at $1 each =$5000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $50,000 before your name drops off
the list. And that's only if everyone down the line makes only
250 postings each! Your total income for this one cycle is
about $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on YOU. You must follow through and re-post
this article everywhere you can think of. The more postings you
make, the more cash ends up in your mailbox. It's too easy and too
cheap to pass up!!!

If you're really not sure or still think this can't be for real,
then don't do it. But please print this article and pass it along
to someone you know who needs the money and see what happens.

GENERAL STEPS ON AUTOMATING THE PROCESS:

Make any necessary changes to this article as explained in step
(2) and when you're satisfied, save it as a .txt file and import
it into the body of your email or news reader program. This way
you only have to change the name of the news group or email address
for each redistribution.

Valuable tip: And very important for those not too familiar with
email: By all means use a word processor to ensure the article is
composed well, but to ensure people that first read it via their
news reader program see it clearly laid out. Re-format it with a
simple text editor such as "notepad," or "WordPad" if you're using
"Windows 95." Providing the text is clearly visible and does not

scroll into the right margin, it should be okay! Using this procedure essentially means the article will be correctly displayed when viewed through other people's news reader. You can of course check this out for yourself before going on line, by viewing it in your own news reader program.

Next, begin by locating the news groups you intend posting to, Netscape 3.0 or a similar news reader is terrific for this, because you can highlight dozens of news groups all at once, enabling you to distribute your article to 1000's of locations in less than an hour or two. Highlight all news groups you want to mail your letter to (which as you know is done by holding down CTRL while left clicking.) This way you can select multiple news groups in one go, choose perhaps a dozen each time. You will then see all news groups you highlighted displayed in the News groups Field.

Next: select/highlight your news groups, then click "To News" place a sensible title in the "Subject" location, click on "Attachments" where upon another box appears. Locate the file you are going to distribute, click on the file and then click "Open" again click OK; provided you followed these instructions, you should see your file greyed out in the "Attachments" box.
Hit send . . . and that's it.

Repeat the process over and over again by selecting further news groups in multiples of 10's but try to be selective with the groups by posting to high volume locations, and don't choose a subject that appears too flashy, this will only put people off. This is an honest and legitimate way of making a reasonable amount of money, and making it on a regular basis. But only if your message is sincere and clearly understood by others will you succeed.

PLEASE NOTE: This system is based on everyone being honest, but it's all too tempting not to bother mailing out envelopes with dollar bills inside. The success for all participating is dependent upon this taking place and if carried out will mean a 500% increase on your article being redistributed! The system won't work to yours or indeed other people's advantage if you don't follow the procedure. You can however, if you wish to remain anonymous use a pseudonym - but please ensure that your address is correct.

AS A FINAL NOTE: Many business ideas for making money, no matter how well thought out and implemented, simply don't get off the ground. And in most cases is due to advertising costs, but the exposure obtained through the Internet is quite honestly -- pretty awesome, so please study this article carefully taking all the time you want, because the moment you begin participating you will be on track for some serious financial rewards.

By the very nature of the way the system works you may not see the benefits the first week. BUT COMMENCING THE SECOND WEEK, YOUR INTAKE OF MAIL FROM AROUND THE WORLD WILL TRULY ASTONISH YOU!
Please give this some serious thought, because this is one of the few money making ideas that really does work.
The one that sends this file take no responsebility of the contents or substance of this text. The mailer of this text-file are not the author.

71333.144@compuserve.com

Hallicrafters SX-28. Pre-war HF design that has become a classic
boatanchor. A strong performer up through 15mc but then falls off
above that. This one is in a Bud black powdercoat cabinet that is
not
original. It has 2 unoriginal knobs for antenna trim and AF gain.
The
internal metal cover over the tuning cap is home made--beautifully
done
but not original. This must have been repainted because it looks too
good.
The paint and raised lettering just sparkle--the front panel is
really
eye-catching. No unoriginal holes or other junk. Working as
designed.
With manual copy. $175
Sprague TO-6 capacitor tester. Later model of this famous line of cap
checkers. This one works but is missing one knob and the original
leather
handle. Needs cleaned. All original. $30

Literature

Emerson 811 original owner's data sheet. 1963 AC/DC set. $2
Emerson 805 original owner's data sheet. AC/DC set. $2

Here's one for you (OK, I admit it, us) boat anchor types. I just came into a piece of gear that I had not seen before.

It is made by E.F. Johnson, and part number is 242-159, it has single in and out SO-239's, and an 8150 inside. No external controls.

My first guess is that this thing is a songle band amp for their 10m Messenger series, but I don't show it in any of my old catalogs.

Anybody know for sure what it is? What it sold for new? If it has any value today? Want to make an offer?

I got it out of an estate I'm helping with, and would like to find a home for it with someone who might use it, so cheap but fair to the family.

Thanks to all,

Ron, N7TAW

good working order.
1 S20R $92 US or $125 Canadian.
1 S76 $111 US or $150 Canadian.
1 S85 $92 US or $125 Canadian.
The price does not include transportation from Calgary, Alberta.
Please call 1-403-341-6071 or 1-403-282-0356. If Don is not in
please leave a message and he will return your call.
Thank you.

5348. Ah Morse is dead!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-20 00:00:00 UTC
From: Bis_Wichy@webtv.net
Message-ID: <5oe4io$4pn$1@newsd-4.alma.webtv.net>
Source record: 118757

"They" having been saying that ever since Reggie Fessenden figured out how to audio modulate a spark transmitter.

97 years have past since sound was impressed unto radio waves... and morse is still very much alive. You only have to check this month's QST. Scores of ads for keyers, bugs and instruction tapes. Why even on page 21 there is a picture of a complete 1 watt radio built inside a film box. Page 53 shows how you can put CW onto an FM repeater... I bet ol' Armstrong is spinning in his grave faster than one of Fessenden's Alternators!

CW is still very much alive in the military despite being dropped from MARS and the Coast Guard. Navy SEALS, MARINES and Army SPECIAL FORCES use CW exclusively. CW was used to report Iraqi troop movements days before the battle. They learned their lessons during Vietnam when they tried using FM/SSB and found it was intercepted and jammed too easily.

Morse code is still used on many commercial circuits. Just take a listen to any shortwave receiver and you will hear diplomatic traffic being passed. It is still the method of choice for "field operatives". The polite word for spy. I am sure you have heard those strange CW 5 letter code group signals sent on real chirpy transmitters!!?? I have even copied CW on commercial circuits on C band satellites.

AS fellow posters have already stated... the only reason the ITU is dropping it is cost. The rules only came about after the sinking of the Titanic. Since most people now travel by air and the ships crew is expendable, why bother?

Of course like all computer based technology, it has it share of bugs. (HI)
but the REAL fun is still a few years away. Today we are at the bottom of the solar cycle but when Cycle 23 starts, Sunspots and solar flares should pick up. Now what do you imagine happens to satellite electronics without tons of atmosphere to protect it?

Some of you will say the electronics are "RAD hardened". To which I say, why do satellite failures always increase during peaks of solar cycles? Nothing short of a very VERY thick lead plate can protect anything (including living things) from the radiation coming from a solar flare.

Not much you can do when the satellite system is down. Hope the Captain can still find that paper chart with those funny dots and dashes.

... as for the Coast Guard...

They will be using CW again, the day after a major shipping incident has occured and was later found out that the ship's computer/communications system was down and the crew desperately tried to use CW to summon help.

5361. Need Hallicrafters S-72 Info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-20 00:00:00 UTC
From: Adam KD6POC <kd6poc@jps.net>
Message-ID: <5oerpg$1a9@blush.jps.net>
Source record: 118770

Hello There!

Could anybody E-mail me the pin resistance table for the Hallicrafters S-72? It is in Sams Photofacts #82-6 according to my index.

I need the pin resistances for all of the tubes to make sure the receiver is okay before I fire it up. I have a manual, but I lack the photofacts that so convienently states the pin resistances.

The previous owner converted it to 12 VDC operation, and I have just finished converting it back. I used the manual, but this info would be nice to have before giving it the hard smoke test.

Thanks a lot,

73,
Adam McLaughlin KD6POC

From: rwayne@ctc.net
Message-ID: <33AB1C4D.4C64@ctc.net>
Source record: 118771

I am working on a Swan 260 six meter tranceiver. It will not
transmit and I have tracked the problem down to very low output
from V1, the VFO amp stage. Futhermore, it looks like the output
from VFO buffer transistor Q3 is also very low.

I would like to communicate via e-mail with someone who has
experience working on the 250 and has knowledge of the expected
signal level out of the VFO. Your help will be very much appreciated.

Is there a SWAN reflector/list on the 'net?

73,
Richard W4LN

Patty Schwalm wrote:

"I talked to my father again, and here's what's happening. AFAIK, all
that's left are resistors and capacitors, but there's lots of debris. There
are *some* small TV tubes. Testers (22 square inches, does that make
sense?). Dad is being a bit strange about them; he says they have a
poisonous component. The ieee journals are still there. "

The tubes (8" diagonal) were probably ones that were designed to be
connected to a black-and-white TV chassis temporarily for testing, so that
a service technician could take only a chassis (not a whole, large TV
console) to the shop to work on it. (For color the practice was to keep a
normal tube, usually in a cabinet, with special cables and so on to connect
it to various chassis.) The "poisonous" part might be the phosphor used in
the tubes; this isn't dangerous unless you break the tube, but older CRTs
like that would shatter a lot more easily than most modern tubes that have
a tension band around the screen.

"There is a wonderful thing that I believe is a test signal generator. It's
a metal cabinet about 8' high, with tubes in it. Dad is rather vague, but I
think it was used to generate test patterns on TV. Dad used to rent a
tower to broadcast to the handful of other people in the area with TV's. I
hope his plant foreman
salvaged this and moved it."

That could be a monoscope generator; the monoscope was a CRT that contained
a printed test pattern. This was useful for generating a consistent test
signal in the days before digital technology. The rest of the 8' rack
would probably be a sync signal generator that isn't strictly part of the
monoscope unit but is needed to drive it.

I am posting this for a friend Randy who has e-mail but no net access.
"Reply to him only at ke4yzn@juno.com"

Wanted to buy Ranger or perferably a Ranger II. Must be complete and in
working condition. Please state price and describe condition in your
replies. Also describe cosmetics as far as scratches/dings etc. Would
really like to find a clean Ranger II in working condition, but will
consider just a plain Ranger..

5366. SWAP: Complete Run of the &#65533;AM/Press Exchange&#65533;

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-20 00:00:00 UTC
From: remler@ll.mit.edu
Message-ID: <remler-2006971447270001@macbayliss.atc.ll.mit.edu>
Source record: 118775

I have the complete run of the AM/Press Exchange, from issue No.1 (May 1983, when it was called &#65533;Alternative Modulation&#65533;) to issue No.116 (December 1995). This magazine, edited by Don Chester K4KYV, was a 16-page small-format periodical dealing with everything from the politics of amateur radio AM (such as the kilowatt ban of 1990) to news and views of AM&#65533;ers, to photos of AM folks and their equipment, to technical articles on building and modifying AM gear, to reprints of old technical data sheets on AM parts like mod transformers and tubes. It&#65533;s a great gold mine of recent AM history and technical information; a mini-version of and precursor to the much slicker Electric Radio. Altogether this complete collection, in excellent original condition, comprises over 1,800 pages of great reading and entertainment.

I&#65533;ll trade these hard-to-find issues for a Drake R4, R4-A, or R-4B receiver in reasonable shape. Contact Rick WA6NCX at <remler@juno.com>

5367. ULR17 PIECES/MANUALS WANTED

Hi Gang,

I don't know if this thing is a boat anchor, it weights enough to be one. I need manuals and any pieces that might be floating around for the ULR17 system. I especially need the MX9428 pan processor for it. I also especially need the manual for the C9736 control box. I have 2 control boxes and neither them seem to be working right.

From: Phil Nelson <philn@accessone.com>
Message-ID: <01bc7d1c$6b37b320$5a59d5ce@philnhome>
Source record: 118844

I just posted the SAMS S-40 stringing diagram on my website:

http://www.accessone.com/~philn/art/s40cord.jpg

After getting home (and away from the scanner), I noticed
that I also have the S-40A Hallicrafters service bulletin. Looks
about the same, but the notes say to wrap three turns of dial
cord around the tuning drive shafts, whereas the SAMS diagram
seems to indicate three and a half.

Maybe this will get you going, anyway.

5369. FS: Hallicrafters SX-133 $125

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-20 00:00:00 UTC
From: nyet@juno.com
Message-ID: <5ocqrh$68a@sjx-ixn8.ix.netcom.com>
Source record: 118845
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

Hallicrafters SX-133 general coverage receiver.
Seems to work quite well. BBC to room filling
volume, etc. Seems in good condition.

All original knobs. No major scratches (usual
very minor stuff).

$125 plus shipping from Tacoma, WA 98424

Thanks

Dave nyet@juno.com

5370. FS: Heathkit DX-60 (no suffix) $45

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-20 00:00:00 UTC
From: nyet@juno.com
Message-ID: <5ocrea$68a@sjx-ixn8.ix.netcom.com>
Source record: 118846
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For sale:

Heathkit DX-60 (no suffix). I have not tested this
one out. It's all there - this is the model with
the recessed meter. One knob is slightly different
color than the rest, but not big difference.

When plugged in, it lights up. No other tests have been
done. AS-IS. With 2 crystals in the rear crystal jacks.

$45 plus shipping from Tacoma, WA 98424

Thanks

Dave nyet@juno.com

5371. FS: ARC-5 Receivers (3)...

Newsgroup: rec.radio.amateur.boatanchors

From: nyet@juno.com
Message-ID: <5ocrsh$68a@sjx-ixn8.ix.netcom.com>
Source record: 118847
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For sale:

3 ARC-5 command receivers:

BC-455 7-9 mhz $25

BC-454 3-6 mhz $25

BC-946 .5-1.5 mhz (broadcast band) $50

I have had these for many years. Last time I powered them was ages
ago and they all worked. I no longer have a power supply, and
cannot test them. The 455 and 454 have been modified for BFO,
the 946 has a volume control added.

Prefer to sell all three for $80 plus shipping from Tacoma, WA 98424.
Will wait a day or two to see if anyone wants to buy all 3 as a
set before splitting up.

Thanks

Dave nyet@juno.com

5375. Interesting HQ-145X

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-21 00:00:00 UTC
From: dhall@jps.com
Message-ID: <33ac677c.33759624@news.ipass.net>
Source record: 118702

Hi folks,
I just got an HQ-145X (cool receiver) and noticed some interesting things about this one. Maybe some of you Hammarlund gurus out there can shed some light here.
This is clearly an HQ-145X, as it has the crystal jack (and works with a crystal) and has 11 tubes. Even says HQ One Forty Five X on the front panel. But it has a cabinet with a hinged top like the HQ-145A. On the rear of the cabinet is the tube layout with HQ-145X printed at the top. And unlike the HQ-145X in the ads and books I have, it has a 2 position XTAL/VFO switch instead of the usual 4 position switch, with the noise limiter being controlled by a push/pull switch on the Slot Depth control (which is also screened "Limiter" on the front panel.)
So, do I have an early model, a later model, or what? The serial number (?) stamped on the back of the chassis is 4456. It has the 24 hr. clock/timer. Anybody have a 100 kc calibrator they'd sell?
By the way, the 145 is a pretty neat receiver. It sounds great on shortwave broadcasts, and performs fine on CW. My National NC-173 is a little jealous, but she'll get over it.
73,
Doug, KF4KL

5376. FS: Lionel J-38 in Original Box

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-21 00:00:00 UTC
From: keymaster@stlnet.com
Message-ID: <866938823.2024@dejanews.com>
Source record: 118703
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.antiques.radio+phono

For Sale:

Lionel J-38 in original Signal Corp box. Box is marked "Signal Corps U.S. Army Key J-39 file #13946 - Phila.-43 Made By The Lionel Corporation New York, N.Y."

The lid is 100% present but some of the hardware has punched through it (see explanation below). The key has two flaws that I can detect:

The previous owner interchanged the spring adjust screw with the lever travel adjust screw. This caused the lever adjust screw to poke through the lid of the box which caused the damage to the box. The lever adjust screw does not have tapered threads and, when it was applied to the spring, slightly uncoiled the spring. It still works but the spring's shape is slightly uncoiled. I have swapped the two screws so they are now in their correct position.

The knob of the circuit closer (not the key lever) is missing (the circuit closer lever is there). I think you can get a reasonable replacement from the Vibroplex company. If I remember correctly, the knob on their speed key circuit closers fits the circuit closer on the J-38 hand keys.

Key is dusty but is otherwise 100%.

Price is $65.00 + shipping ($5.00 U.P.S.). If you're interested, please e-mail me.

Thanks for the read!

Derek

Morse code has been a problem for me also ! I've been stuck as a general for years now and can't seem to get above 15 WPM BUT I'll keep trying because it gives me a goal to work toward ! The code requirement will distinguish me as one of those who cared enough to fulfill a set of requirements !
I've been around the bands and heard lids with every class of license, so I'm not naive enough to think it makes one a better ham, but at least my neighbor is not apt to buy a rig and jam me since he figures he needs a license !
I'm not too bright, but anyone can memorize the Q&A, so I'll have to practise a bit more on the code and not waste time whining about meeting existing criteria !
Best wishes, Ed K.

I'm selling an Atlas 220-CS desk console with the optional VX-5 VOX kit, in extremely nice condition.

This is the unit that includes the power supply and speaker, and the Atlas 210/215 slides into it. The VOX accessory mounts in the lower portion of the console with its controls front panel accessible. The VOX kit also allows the rig to switch from receive to transmit when the key is pressed, thereby solving a major irritation when using this rig on CW.

Manual/schematics included.

Price $125 plus shipping if needed (your choice of method) from Nashua, NH 03060.

e-mail or call (603) 889-1067

A great collection to have!

One thing however, I don't think this is a complete collection of the AM Press/Exchange. The publication was started in the late 70's by Howie, W2NRM, and later taken over by Don, K4KYV. Anyone have those "early" issues??

And I'm sure that learning how to drive was a real impediment in getting a driver's license.

Ah yes, the instant gratification generation. They now have motor/voter registration, maybe the best solution would be to issue licenses when you apply for a social security card. Yeah, that's the ticket--I'm sure the league will back it 100%.

BTW, I've never been a big CW fan, I was just willing to meet the requirement because I wanted to be a ham. With multiple-choice the tests are a joke anyway. Let's see if I can remember---draw a schematic of a 6-tube superhetrodyne receiver, include all resistor and capacitor values.....

Please accept this as the good -natured ravings of an old-timer as intended---we earned the right.

CQ CQ CQ......A1 operators only, no kids,no lids no space cadets.....

Welcome to ham radio, CW and old-timers come with the package.

Best 73, Greg K3EWZ

I have a few mil surplus modulator units from APS-104 search radar (from B-52 bomber - 1950s vintage). These were used to fire a large pulse magnetron (in another unit). Contains a thyratron, several HV rect tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual. Unused, still in original box, $85 plus shipping (110 lbs.) from southeast Alabama. (or pick up). 36330 zip. Email or call 334-347-5281.

5425. FS: Weatherproof antenna box

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-22 00:00:00 UTC
From: hudog@ibm.net
Message-ID: <33ADDC28.3B47@ibm.net>
Source record: 118728
Cross-posted to: rec.radio.swap,rec.radio.antenna,rec.radio.amateur.boatanchors

I have a very nice, never been used, heavy duty junction box. It's approx. 6"x12"x12", and is approx. 3/16" steel. It is painted light grey. It has a cover with a weatherstrip gasket, and internally it has 4 standoffs for mounting relays / boards / etc. No holes drill in it.

I'd like $15 plus shipping.

73, George N0GH

5429. FS: Galaxy GT-550

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-23 00:00:00 UTC
From: Peter Ferrand <petef@sprynet.com>
Message-ID: <33AF2C34.3FAF0D68@sprynet.com>
Source record: 118654
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale: Galaxy GT-550 transceiver, SC-550 speaker console and AC-400 AC
supply.

I had another years ago and really liked it, nice audio considering 2.1KC
filter, and just a nice tuning, stable, and easy handling rig.

Runs 550 watts SSB input 80-10 with switchable sidebands designed for SSB
and CW only. Includes a "taut band" S-meter/plate meter. Good rig for
anyone who appreciates the Galaxy philosophy of clever design for maximum
bang for the buck.

Front panel appearance is good, with one or two very minor scratches. Af

gain control knob is wrong but reasonable looking. Power on/off toggle switch neatly inserted into drilled hole centered above the rf/af gain control (haven't these people ever heard of line cord switches?). Paint coming off both black cabinets and a repaint would be simple and a good idea. Main tuning and plate tune knob trim inserts are scratched, may be

amenable to Dremel-polishing.

Electrically the set receives and transmits but there are two probably related problems - low power output (about 20 watts) and the 12 vdc is up
around 20 volts. Once I discovered this I stopped playing with it. However,
receive seemed OK sensitivity wise and the transmit fidelity seemed fine.
Off resonance the finals tubes draw plenty of current so they may well be
good.

Price $125 includes manual with detailed troubleshooting and alignment info. I'll be happy to securely box it up for shipping if needed, you pay
shipping by whatever method you like. COD acceptable.

73 es tnx,
-Pete

For Sale:

Millen 90651 Grid Dip Meter with coil set in metal stand. The coils still even have their little cardboard protective tubes. A few paint dings and nicks in the meter, but everything is in nice condition. Power cord has been replaced. Meter powers up and the needle moves up and down as you tune it - that's as far as I've tested it. No manual.

$75.00 plus shipping from zip 93401

Message-ID: <wa2iseEC7sLK.KF4@netcom.com>
Source record: 118742
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.audio.tubes

Talked to an old friend tube guru, and he suggested a different way of
wiring the radio's mixer tube circuit. The circuit that used to be
a 12BA6 tube. Instead of connecting a cap from the local
osc triode to the mixer screen grid, connect the triode's plate
to the mixer screen grid circuit. See:
http://www.netcom.com/~wa2ise

and look at both compactron and sub-miniature tube AM radio
pages. As both are very similar, except for different tubes.

You could call this a "work in progress". :-)

For Sale: Gonset Super 6 Model E mobile converter.

Covers 10,11,15,20,40,75,19,49 meter bands and outputs on the broadcast band.

The Model E is designed to work with "modern" hybrid radios having no B+ supply, and allows you to power the converter using a 45 volt B battery " however, you can still power it from higher voltages when available just as with previous models.

In reasonable shape " dial"s clean, few scratches on cabinet, been long time since I used this so don"t know if it works, but looks like it"s all there. Includes good quality manual copy from Hi-Manuals.

Price $35 plus shipping if needed from Nashua, NH.

E-mail or call (603)889-1067.

Tnx es 73,
-Pete

Hello -

Looking for manual or copy for Motorola (manufactured
by Measurements Corp) RF Signal Generator model
S-1320. This generator is the transistorized version
which resembles the older tube model T-1034. The
sig gen would be usually used in the commercial
two way radio trade.

Will pay any and all costs for copying, or will copy
and return at your pleasure. Please check your file
cabinets, and help me get my swap meet treasure
back on the air!

Thanks for reading this.

::::: DENTRON AT-1K ANTENNA TUNER :::::

SPECIFICATIONS:

Power Handling: 1200 w PEP input, 1 KW CW input

Metering: Relative forward power + SWR

Antenna Switching: Coaxial cable (50 / 75 ohm)
Random wire
Balanced output (ext balun)
Bypass (tuner out of circuit)
Alt (coax to 2nd ant or dummy load)

Dimensions: 3.75" H X 10" W X 9.5" D

Weight: 7 pounds

Color: Black steel case with white lettering

This unit is in absolutely perfect condition. 100% original. No mods.
No scratches. No stains. Absolutely NO arc-overs or flash-overs from
excessive power input.

This unit was manufactured in the mid-70s, and is one of the last
affordable REAL antenna tuners. In other words, it is ruggedly
constructed and built to last.

E-mail if you need additional information.

PRICE: $110 (I pay UPS / RPS shipping)

No, but new ones a a bit expensive & hard to find.
Especially good ones, lots of late model 8417
had grid current & bias stabillity problems..
That's more of a problems with some
amplifiers (Dyna Mk6 comes to mind)
than others..

I have the following pieces of 7/8" hardline coax for sale. All was in service and use until it was recently removed. No connectors, they were all removed to facilitate removal from towers and buildings. Almost all of the coax is Andrews LDF-50. Price is $1.25 per foot on runs less than 100 feet, $1 per foot if over 100 feet. Shipment will be made motor freight collect. If possible, shipment will be made by Watkins Motor Freight that is offering a 50% discount to areas that they service.

#1 120 feet #2 50 feet #3 48 feet #4 110 feet #5 80 feet #6 70 '

#7 65 feet #8 48 feet #9 80 feet #10 60 feet #11 90 feet #12-40'

#13 200 feet #14 180 feet #15 140 feet

All lengths are approximate.

I will also have a large amount of 1/2" hardline later this week.

Simple enough:
with a POWERFUL magnifying glass 20-30X, look at the pins. their
scrapes will say they sat in a single place a long time, or have been
put in and removed or not. If not, they are lo-time or new.

Understand, this says nothing about quality, just pin condition.

Hope this helps.

5496. Collins 30K Series

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-25 00:00:00 UTC
From: kj5ag@cyberback.com
Message-ID: <867237271.12636@dejanews.com>
Source record: 118613

I understand Collins made an additional series of the 30K transmitter other than the 30K-1. I think 2, 3, 4, ? They, I think were military issues. I have tried searching the web for this although no one mentions these units. I have a good friend who possibly has one of these, although the miltary nomenclature does not refer to 30K. This unit looks identical to a 30K-1 externally. The previous owner had taken all the guts out of this rig preparing to overhaul it and his house caught fire and destroyed it! The entire cabinet was luckily in another location and is in pristine condition. Does anyone have any info at all on these others (2-4), such as final tube complement, modulators, etc? Your response will be much appreciated!

5502. FL-dx-500 (FL-200B) TX trouble....and improvements

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-25 00:00:00 UTC
From: la8ak@online.no
Message-ID: <33b1a305.1202418@news.online.no>
Source record: 118619

Hi
In 1974 I bought a secondhand Sommerkamp/Yaesu FL-dx-500 from Lowe Electronics, UK,it was priced £110 (delived via securicor to my work outside Stratford-on-Avon), which I found quite reasonable. I believe it was an early version, and it would compare to Sommerkamp FL-200B in many respects. It compares to Yaesu FL-dx-400 (I believe G3NUE operated this version- with FR-dx-400). I used it until I got a Drake TR-4 (and HX-20) in 1978, FT-101B in 1979 (with Drake R-4C).

I spent much time improving the FT-dx-500. First the VFO was modified, a 6BL8/ECF80 (=ECF82/6U8) was found much better than 12AT7/ECC81 but possibly because of bad Miller effect with the old circuit, the VFO was pulled 200kHz, this had to be calibrated for. I used the triode in oscillator and pentode in buffer, with a 3rd order lowpass pi-filter in the anode.
secondly I improved the ALC. Good reports were achieved and local British friends told me "they now could understand my English language much better!"
Later I tried to improve the first TX mixer, bad spurious problems, possibly not as bad as with FT-dx-500, but still much worse than what is necessary for easy spotting with separate receiver (Drake 2-B)
I tested several versions of the 12AT7/ECC81 mixer, but those having good balance had rather poor gain. So I ended up installing a 9MHz ssb exciter and a 9MHz cw xtal osc for cw. the latter is easy and can improve the transmitter even if one does not fit a new ssb exciter.
after some experiments, the mechanical filter did not work any more, so I had to find a solution...
I installed a 47K 2W resistor on the pi-filter antenna side - to ground - to avoid having high voltage on the antenna!

Yea, it was good 30 or more years ago so it must be good today. And in keeping with that line of thought we need to get rid of penicillin (sp), TV, most surgery, cancer cures, Xerox machines, automobiles, aircraft, etc., etc. and any other technology that has been introduced in what, the last 100 years. Oh, the Internet definitely has to go.

5506. The Cold War, AM Stereo, and Compactrons

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-25 00:00:00 UTC
From: jbyrns@enteract.com
Message-ID: <jbyrns-2506972322360001@abraxas-0.d.enteract.com>
Source record: 118623
Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.radio.amateur.boatanchors

Hi Everyone,

Last week I was reading an article in the July 1997 issue of QST magazine titled "The Day the US Army Invaded W4TLV". Barry, the author of the piece, mentioned that back in the cold war days, a Gates salesman told him about a Military system that sent Teletype messages by FSK on the carrier of AM broadcast stations. The salesman showed him how to tune in the tests on WSM, the first station to be equipped with the system. The FSK Teletype messages were transmitted with no interference to the normal AM program. I have heard that WGN here in Chicago was also equipped to broadcast these Military Teletype messages. That got me to thinking about the development of AM stereo. Back in the late 1950's there was much work being done by many manufacturers on AM stereo broadcasting. There was even more work being done on AM stereo than on FM stereo, and everyone expected the FCC to approve a system. But in 1961 it was FM that got a stereo broadcasting standard, and the FCC said they would not approve AM stereo broadcasting. At the time the story was that this was done to try and level the playing field for FM, giving FM stations the advantage of stereo, to use in competing with the dominant AM stations.

After reading the QST article, I have been wondering if leveling the playing field, was just a cover story, for not approving AM stereo back in 1960. Could the real truth be, that AM stereo would have caused problems for the Military Teletype FSK signals the being broadcast on AM stations, and the Military leaned on the FCC to kill the AM stereo idea at the time?

Coincidentally, last week I came into possession of a number of issues of the RCA Review, a technical journal published by RCA. In the September 1960 issue was a description the AM stereo system RCA was trying to get approved by the FCC at the time. Included in the article were discussions of 4 possible methods of building an AM stereo system. Field test results for RCA's system, installed at WNBC in New York were also given. There was also a discussion of receiver design issues, with a number of different block diagrams. There was also a schematic diagram of table radio that had been modified by the addition of stereo decoding, and a second audio channel. Needless to say, in 1959 this was a tube radio.

This 1959 AM stereo tube radio got me thinking about what it might take to build an AM stereo radio using tubes, to work on the CQUAM system used for AM stereo today. I have started batting some ideas around in my head, and I will report on them when they are more fully developed. Meanwhile, does anyone else have any Ideas on how best to build a CQUAM AM stereo radio using tubes?

Robert Casey's work on his Compactron AA3 radio makes me think that a tube AM stereo radio should make use of Compactrons, and croma demodulator tubes designed for color television. The problems Robert had with heater dropping resistors/capacitors would go away if the heaters of about 4 more Compactrons were added to the circuit, making it an AM stereo CQUAM Compactron AA7. The tube count of the design I am thinking of will probably be more like 10 tubes, so I would forget the series string heater circuit, and use 6.3 Volt tubes with a filament transformer. That's what RCA did in their AM stereo AA8 design from 1959, but it was still a hot chassis design, with the line being rectified directly for the B+ supply.

Some corners can probably be cut in the CQUAM decoder, I think the 4 system radios of the 1980's such as the Sony SRF A100 did this, using one compromise decoder for the CQUAM, Magnavox, and Harris systems, and a second switched decoder for the Kahn system. National also had a design which used an FM demodulator, along with an AM envelope detector, to decode the CQUAM signal. No phase lock loop's were used in this design. If anyone has any thoughts on how to implement a CQUAM radio with tubes, I would like to hear your thoughts.

Regards,

John Byrns

Hi, Michael:
There was really not very much to it, and it was not only used by the military. It was simply FSK of the station carrier frequency, quite narrow. I seem to remember 28 Hz shift was one that was tried. By the way, this technique could have worked with Leonard Kahn's AM stereo system.

Hoy hoy,

I have heard that the military FSK was used on WABC, 770 here in
New York. Supposedly, WABC had such a potent signal and
down the East coast that it used for Naval communications.

Can anyone confirm this?

Does anyone have any information on this subcarrier FSK system?

From: Neil Heckt <neil@aade.com>
Message-ID: <33B2B462.4035@aade.com>
Source record: 118640

The Digital Frequency Display with backlit display module is now
available. Unfortunately they are expensive, $29.30 Digi-Key price.

Digital Frequency Display with backlit module $74.95+$1.50 S/H
Digital Frequency Display standard module $49.95+$1.50 S/H

DFD specifications have changed a little to make it easier to adjust
and assure temperature stability. IF offset range 16.383MHz max in steps
of 1 KHz.

Hi John,

I am not sure if there would have been an interference problem between the military FSK teletype system, and an AM stereo system or not, but the potential was certainly there, which is why I was speculating if that was the reason AM stereo was not approved at the time. I don't know why you single out the Kahn system as being one that the military TTY system could have worked with. If it would have worked with the Kahn system, it probably would have worked with most of the others too, at least the ones that are variations of QAM, like the Kahn system. All the AM stereo systems that have been proposed over the years, the Kahn system included, phase modulate the AM carrier, so the potential for interference to the TTY signal is there with all of them, Kahn included. To work together, the TTY signal would have to be low pass filtered before modulating the transmitter. Similarly the AM stereo difference signal function that phase modulates the AM carrier, in all AM stereo systems, would have to be high pass filtered. These filters would have to be non overlapping, and the phase effects of the high pass filter would have to be equalized by an all pass network to maintain low frequency separation in the AM stereo system. The AM stereo receiver would also need a high pass filter in the phase modulation channel, to keep the TTY signal out of the recovered audio. The TTY FSK signal would also have to be low pass filtered in its receiver, to keep the AM stereo phase modulation information from interfering with the TTY signal at the receiver.

The only advantage that the Kahn system would have over the later AM stereo systems, is that it doesn't include a low frequency stereo ID signal, but none of the early systems included this feature, and so would have caused no more of a problem from this source than the Kahn system. For instance today's CQUAM system uses a 25 Hz signal in the Q channel, to indicate to the receiver that a stereo broadcast is taking place. This 25 Hz modulation, which is not necessary for CQUAM to function, would

probably play havoc with the TTY signal. But in the context of 1959-1960, none of the systems proposed at the time, included an ID signal. The degree of the interference problems into the TTY signal would depend on the degree of phase modulation, used by the stereo system, at low frequencies. Some of the AM/FM systems might have been worse than the Kahn and the other QAM variants, because they would have had several radians of phase shift at low frequencies, while the Kahn and the other QAM variants would have less than one radian of phase shift at low frequencies. This would have produced worse interference from the AM stereo signal into the TTY signal, but the effect of the TTY signal on the stereo signal would have been reduced in these AM/FM signals. So I don't really see how the Kahn system would have worked much better with a TTY signal present, than most of the other systems proposed at the time?

Regards,

John Byrns

5532. Heath HW-32 For Sale

Newsgroup: rec.radio.amateur.boatanchors

From: markem@primenet.com
Message-ID: <5ovdd0$bul@nntp02.primenet.com>
Source record: 118645

I have a Heath HW-32 for sale. It's a 20M single band SSB rig. I got it in a package deal and have no use for it. No power supply but does include the power cable, a Heath desk mike (not sure what model), and a copy of an HW-32A manual (close but obviously some differences). I haven't even powered it up so I don't know if it works ("Worked fine last time I used it..." :-). It appears to be complete, all the correct tubes and knobs are there anyway. On looks, I'd rate it about an 8 out of 10 although the mike is a bit rougher. It's yours for $45 and I'll ship CONUS. Email if interested.

Hi Bill,

rec.radio.broadcasting is not a good place to redirect anything. I have submitted half a dozen articles to rec.radio.broadcasting in the last couple of weeks, and Bill P. has not seen fit to post one of them. He sort of does his own thing as far as moderating that group, and if he doesn't like something you
have to say, even if it's on topic, it won't see the light of day. I guess maybe I am persona non grata at rec.radio.broadcasting. Maybe Bill is sulking because John Kodis's Brodacast Station Location Page has out done Bill's similar data page, by giving plots of the antenna radiation patterns of AM stations. At any rate, rec.radio.broadcasting, being a moderated group, is not a good place to carry on a discussion if you want a free exchange of ideas.

Regards,

John Byrns

5536. WTB or trade for Collins 270G-2/G-3 SPKR

Hello all,

I'll be calling CQ on 50.400 AM all this weekend.

Was a bummer I missed out on lastnight's good opening.
Need to check the radio before I go to bed.

Sat I'll be on from 10:00 pdt - 22:00 pdt
Sun from 10:00 pdt - 18:00 pdt (later if there's openings)

Hope to hear from you...

P.S. If you have not checked out my 50AM web page, please do so......

I've given some thought to building a C-QUAM vacuum tube receiver, although I've never gotten around to it. I had some of the same ideas that you had, such as using multi-element tubes and "sheet-beam" chroma demodulators for the I and Q detector. I'd like to know how you got the tube count down to 10 tubes because my estimate was around 30 tubes for a complete receiver including push-pull 6L6 audio outputs. A receiver like that would be nice, and it would dim the lights when turned on!!

Happy Tubin' (i.e. keep your fingers away from the B+)

I don't recall if I've seen your AC-1 post before and/or sent you a note. Either way, good luck on your search. I have seen them listed (sometimes for outlandish prices). I do not have my first AC-1 Transmitter (ca. 1957), but I have my second, which I bought in about 1965/66. I'm doing a restoration on a KnightKit Ocean Hopper and may one day get them both on the air together.

Again, hope your search is successful.

Hi Alfredo,

My tube count of 10 was just a finger to the wind estimate for a receiver with a compromise CQUAM detector, in other words, not a true CQUAM detector. There are two different designs I was thinking of. The first based on ideas National used in an IC decoder. They used an envelope detector for the L+R signal, as is normal practice in CQUAM receivers, and an FM discriminator for the L-R difference signal. The "L-R" output from the FM detector was integrated, and then feed through an audio multiplier controlled by the L+R envelope signal. I don't know how well this works as a CQUAM decoder. When I get some time, I want to delve into the CQUAM math a little. RCA only used 8 tubes, mostly 7 pin miniature tubes, and a silicon diode for the B+, in an AM stereo receiver for their AM/FM system, so I figured, I could build a crude multiplier with two more tubes, to make a tube version of the National IC. The tube lineup of the RCA AM stereo radio was: 6BE6 Converter, 6BA6 IF Amplifier, 6AL5 AGC detector and envelope detector, 6BH6 Limiter, 6AL5 Discriminator, 12AX7 1st Audio amplifiers, and 2 - 6AS5's Audio Output's. That's eight tubes, add a couple more for a multiplier and we have a total of 10 tubes. If we use a few Compactrons, we can cut the tube count down by at least two tubes.

The other more original compromise design is inspired by the similarity of the CQUAM system to the Harris system. Basically it is a CQUAM receiver without the cosine corrector. The cosine corrector could be another project, as a later addition using additional tubes. The tube lineup would be something like the following:

Tube type Functions

Pentode Triode Mixer and Oscillator
Pentode Triode Reactance Tube and DC amplifier
Dual Remote Cutoff Pentodes Two stage IF amplifier
Triple Diode-Dual Triode AGC detector, envelope detector, and audio matrix
Sharp Cutoff Pentode 455 kHz Oscillator
Quad Diode Quadrature detector (ring modulator)
Triode Power Pentode Left channel 1st audio and audio output
Triode Power Pentode Right channel 1st audio and audio output

That's only 8 tubes, 2 of them Compactrons, leaving an extra 2 tubes from the count of 10, to cover unforeseen problems in the final design, or to get started on the cosine corrector circuit.

Besides a few more tubes for push pull outputs, what did your design use it's 30 tubes for? With thirty tubes, that would be an impressive radio. I think I like it already, sort of like one of those old monster tube count Zenith's.

Regards,

John Byrns

I am looking for something to receive 20 40 & 80 meters... I don't care if it operates by means of Transistors, Tubes, Rocks, or squirrel power! I would just like to be able to receive the above bands on a rig that has a readout or dial that will give me an idea of what fequency I am at.

I live in the Greenville South Carolina and could drive to pick up Rcvr if your location is close enough. Otherwise we could arrange prepayment and shipping.

Price wise.... I am looking for the cheapest thing I can find.

"Duh" thats a given... every buyer wants the lowest price.

What I guess I mean by the above is that.... I am not preoccupied with asthetics. If its missing a few knobs or lights are burnt out thats fine... Notch filters etc.... are not required. I don't have a lot of cash... I am a young married trying to pay for a new home and land..... and a boat anchor at the right price that I could build filters for etc... would be right up my alley.

Anybody feeling charitable.... I may be more trouble than I am worth.... but I will sing your praises high and low! <Grin>

Being a fairly new ham that just caught the HF bug 5+ months ago... I find myself ignorant of all these model #'s. Drake A-line..... is this a HF rig... if so..... What bands? where are you located?.... and if to far to drive... appoximately what would shipping cost to N.W. South Carolina? I am looking for a older HF rig... to use as receiver for QRP work. I have faith that my homebrewed transmitters will suffice, but so far the Rcvrs I have built really lack in quality.

There's an interesting article in the July 1997 issue of Smithsonian on climbing crews and building 500 foot plus towers. Looks like high definition television will drive add't demands for 1000 foot towers in addition to cellular phones and personal communications services.

5571. Re: Building 500 foot plus towers

5578. Re: The Cold War, AM Stereo, and Compactrons, C-QUAM description web page

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-28 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseECH1np.IAA@netcom.com>
Source record: 118587
Cross-posted to: rec.audio.tubes,rec.antiques.radio+phono,rec.radio.amateur.boatanchors

As part of this thread had mentioned building an AM stereo radio with compactrons, I dug up some info on how the Motorola C-QUAM AM stereo system is done. See web page:

http://www.netcom.com/~wa2ise/radios/amstmod.html

for a brief description and system block diagrams.

A brief description: Virtually all AM radios use envelope detectors. And envelope detectors can't handle a quadrature and in-phase modulated signal properly. If we call the "in-phase" modulation signal 1+L+R (for mono) and the quadrature signal (L-R), an envelope detector will output (square root of)((1+L+R)^2+(L-R)^2), which is not equal to the mono signal. Which means an old AM radio with an envelope detector will sound bad listening to a quadrature AM signal (QUAM).
What Motorola did to get around this problem was to produce a signal that would have an envelope detector yield the correct mono signal (!+L+R). Call the angle between the in-phase modulation and what the envelope detector detects "T" for theta. Then take the mono signal (1+L+R) and multiply it by cosine(T), and also multiply the diff signal (L-R) and also multiply it by cosine(T). Doing vectors, the envelope detector in an old AM radio will yield (1+L+R), proper sounding mono.

Thats called C-QUAM, for compatable QUAM.

AM AM stereo radio uses an envelope detector to get the (1+L+R) mono signal, and also uses an "in-phase" and "quadrature" synchronous detectors, which yield (1+L+R)cosine(T) and (L-R)cosine(T). We can divide the (1+L+R)cosine(T) by (1+L+R) to find out cosine(T). Then we can use that to do: (L-R)/((L-R)cosine(T)) to get (L-R) difference signal.

Then it's easy to get L and R.

Now, all we gotta do is figure out how to build a synchronous QUAM detector with compactrons. And do the (cosine(T)) thing. :-)

There was a design for a synchronous detector using tubes (what else) in
the June 1957 CQ magazine by John Webb (then W0AHM/2) and in the
September 1967 73 magazine by Bill Nagle, (still W3DUQ). Of course
these are C-QUAM detectors but they may serve as starting points.

Source record: 118595

Hi all!

I'm looking to buy the following for a BC-348-R receiver:

DM-28 dynamotor
The connector that fits on the shockmount
An original manual

(I have an original manual for the J,N and Q models, but, the physical layout in the IF and audio of the R version is VERY different and this radio also has what looks like a factory mod using a solid state diode)

If, perchance, you should have one or more of these treasured items that you would be willing to part with, for some amount of monitary compensation or items in trade, contact me at: rhs@pacbell.net.

Regards, cheers and best of health, Rudy Salomon - KD6NRQ

Source record: 118596

I'm in the process of restoring an S-19R. One problem that I haven't
been able to solve is the missing tuning dial marker. As I recall
this is a plastic triangle with a red center line marker. If you have
an S-19R would you please xerox me a copy of this piece of plastic?
Better yet, if you have a scanner, scan it and send it to me as a jpeg
file. I would be very grateful to anyone who can help me finish up
this wonderful old boat anchor.

73,
Ken K4XL

5601. Pirate operator quitting-BA FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-29 00:00:00 UTC
From: moo@midtown.net
Message-ID: <moo-2906972057500001@sl3.midtown.net>
Source record: 118460

I assembled a bunch of equipment to broadcast a pirate radio station-and then I totaled my car. So I have a Heathkit Cheyenne MT-1 with Heathkit HP-13 power supply FS for $100. I also have a 6 ft long 40m whip antenna with trunk mount FS for $60, and a battery and battery charger for $40, or take the whole thing for $160.

5602. Save my Hallicrafters S40!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-29 00:00:00 UTC
From: moo@midtown.net
Message-ID: <moo-2906972100370001@sl3.midtown.net>
Source record: 118461

There must be somebody in the Sacramento CA area who can align my Hallicrafters S40! I don't have a car, so I have to have relatives chauffeur me all over the place, and I doubt I can go anywhere farther than Vacaville, Marysville, Auburn, or Stockton. This BA is currently sitting on the floor-will pay to bring it back to life!

5604. Question about tubes?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-29 00:00:00 UTC
From: lordell@aol.com
Message-ID: <19970629025901.WAA16168@ladder01.news.aol.com>
Source record: 118514

Anybody out there know the main technical breakthough that made tubes manufactured after the middle 1960's have better life before the emission severely dropped. For example, the early television picture tubes would have a life of 3 to 4 years before the picture would dim out. Now they go for decades. I have had the same experience with receiver tubes in the last tube receivers built.

5607. WTB coax switch

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-29 00:00:00 UTC
From: Travis Martin <travism@copycraft.com>
Message-ID: <33B66F7B.2AB3@copycraft.com>
Source record: 118517

I'd like to have a good coax switch...I want a good solid American made one...50 years old is ok, just don't want import. A rotary with 3 or 4 positions would be great...more is ok, but don't really need more.

Thanks,

Travis N5AY

5608. WTB dummy load

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-29 00:00:00 UTC
From: Travis Martin <travism@copycraft.com>

From: paulc@snet.net
Message-ID: <33b69254.7296291@news.snet.net>
Source record: 118530

Hello Folks,

I have about 50 assorted highvoltage mica capacitors forsale.
manufactured by Cornell-Dubilier, Sprague, Sangamo, and Areovox.

I have some of the bolt down with the bolt on connections on the top.
As well as the blocks with the threaded holes and the type with the
solder tabs.

Anyone interested can email me with an offer or call

1-860-485-0355
East Coast time

Also I have a few doorknobs

5623. Wanted: ARC-5s

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-29 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <5p5v1e$rel@sjx-ixn10.ix.netcom.com>
Source record: 118533

WANTED: "ARC-5" Units.

I am a collector/preserver of WW-II avionics.
I am looking for the following
units and will negotiate a fair price plus shipping:

ARC-5 Units:
T-15, T-16, T-17, T-89 and T-90 transmitters.
Any transmitter or receiver factory or depot modified
for above 9 Mhz other then T-23/R-28.
Top cover with intact nomenclature plate for T-16 transmitter.

SCR-274-N
Any receiver or transmitter factory or depot modified
for any frequency above 9 mhz.
Any receiver or transmitter labeled in Cyrillic
or any other non-English language.
Any BC-442, BC-451, BC-453, BC-454, BC-455,
BC-456, BC-458 or BC-459 that is marked as
being produced by Aircraft Radio Corp.
(not W.E. or Colonial).

ATA/ARA:
7-9.1 Mhz transmitter.
Any receiver or transmitter factory or depot modified
for any frequency above 9 mhz.
Any receiver or transmitter labeled in Cyrillic
or any other non-English language.
Any mounting rack, shock mount or control box
labeled for radio set ATA or ARA
(except three-receiver control box).

RAT or RAV
Any radio or accessory marked as part of radio sets RAT or RAV.

Special:
I will pay $100 for the following SCR-274 ("ARC5") transmitter:
BC-696 3-4 Mhz, black wrinkle paint, Built by Western Electric
with the black-and-silver WE nomenclature plate on the top cover,
not the side. Full price for unmodified unit. Will negotiate
price of modified unit.

Also interested in certain units (not BC-453)
marked as Canadian or other non-U.S. markings.

HDTV, maybe, but not Cellular Phones or PCS. The architecture of those
systems generally precludes high towers.

Well, I think Dave hit the nail on the head ... FWIW

w5ntq posted a 51S-1 for sale. KJ6HI utilized what in my opinion is a pretty unsavory and frequent practice of tacking his own 51S1 For Sale on to the original as a "response". This is getting to be more and more common around rec.radio.swamp. Don't know if its just sleazy tactics in general or if its an indication that the reseller market has finally taken a well deserved nose-dive.

Grant/NQ5T

Electronic timer assemblies and components.
All items located 10 mi NW of Philadelphia, PA.
Prices do not include shipping.

```
************************************************************
* DYNAMIC TECHNOLOGIES INC. P/N 88052002 timer assembly *
* *
* Printed circuit, single board. Digitally counts power *
* line frequency to generate four precision timed intervals *
* of 15 sec., 30 sec., 1 min., and 2 min.; also manual *
* start/stop. Accuracy: +/- 1 cycle of line frequency. *
* *
* Control; manual input via membrane switch (or equivalent). *
* User selects one of 6 options on keyboard (DTI P/N *
* 88052003) start 15 sec, start 30 sec, start 1 min, start *
* 2 min, start continuous or stop. On-board piezo loud- *
* speaker beeps for each keyboard entry. Last command *
* entered cancels previous command or command in progress. *
* *
* Power input: 120/240 V 50/60 Hz. Frequency and voltage *
* selected by jumpers on mating connector (A/MP P/N 1-480287;*
* requires up to 10 ea. A-MP P/N 60617-1 pin). Connector is *
* available from A-MP or their distributors. Grounding is *
* required for best noise immunity. *
* *
* Output: Normally Open (NO) relay closes during timed *
* period. One terminal of relay is connected to one AC line *
* terminal (pin) on the connector; other relay contact to *
* independent pin on connector. Relay contacts rated 30A *
* resistive: printed circuit designed for 5A load. External *
* varistors required for inductive loads; can be mounted on *
* mating connector. *
* *
* Timer overcurrent protection; 2 ea fuses, 2AG, 1/8 ampere *
* fast blow, (Littelfuse P/N 225.125 typical) in clips on PC *
* board. 1 set of fuses is installed on board. *
* *
* Size: PC is 4-1/2" X 6" X 1-5/8" overall. Mounting *
* centers 4" X 5-1/2". Designed to mount with four nylon *
* snap mounts, RICHCO P/N DLCBS-4-01 typical. 1800 available;*
* 2 membrane switches included with each timer. 104 timers *
* per carton; shipping weight: approximately 60 lb/ctn. *
* 1; $10.00 w/shipping and schematic. *
```

```
* *
* All 1800: $3000. (reproducible drawings included) *
* *
* 1000 extra membrane switches available @ $100.00/lot *
* *
* 2AG-1/8A fast blow fuses, Littelfuse P/N 225.125. *
* 5800 available in original packing. $65 per 1000, *
* $300 all. *
* *
* NYLON snap-in printed circuit mounts; RICHCO P/N *
* DLCBS-4-01, Snaps into .156" hole at each end; *
* 1/4" spacer between. in bags of 1000. 25 bags available. *
* $20/bag; $400/lot *
* *
* Circuit breaker, Potter-Brumfield P/N W28X1A-5, 5 Ampere; *

MAGNETIC SURVEY INSTRUMENTATION

Prices include shipping in Lower 48.

MEDA uMAG-02WB Handheld, battery-operated digital fluxgate magnetometer. Sensitivity: +/- 0 - 20.00 - 200.0 - 2000 milliGauss F/S, DC-400 Hz (-3dB @ 400 Hz ref to DC). Analog output +/- 2.000 V F/S. Linearity .02% or better. Absolute accuracy +/- 0.5% or better, traceable to NIST. With 10 meter cable and transverse probe, 6 spare batteries in storage case, multiple-battery harness for up to 8 batteries (approximately 12 days continuous operation), analog output cable w/BNC (to oscilloscope input), manual, calibration certificate, transit case. In new condition. Current price from manufacturer is $900. Sell at $450. Three available: all three, $1300 including 3-channel chart recorder (see below).

DEXSIL MAGNUM 310. Handheld, battery-operated, micropro-cessor based 3-axis digital induction milliGaussmeter. Auto-ranging; 0.04-9.96 milliGauss (+/- 2%), 10 - 99.6 milliGauss (+/- 5%), 100-996 milliGauss (+/- 5%), 1.00 - 10.0 Gauss (+/- 5%) for 60 Hz signals in 60 Hz mode. F/S accuracy in 3rd harmonic mode is +/- 5%. In braodband mode (40-310 Hz @ -3dB) accuracy is +/- 10%. Displays all three vector components plus resultant or resultant only. Has low battery indication and automatic shutoff. Fully self-contained. WIth carrying case, manual and calibration certificate. New price $695. Used, very good condition; $250.

LEEDS & NORTHRUP SERVO RECORDER 136-304-304-304-00-00-00-L0088-L0088-L0088-6-BV-000. Three-channel servo recorder, modified for potential inputs. Can be internally adjusted from +/- 1 millivolt F/S to +/- 2V F/S. Set at +/- 1V F/S. Chart speed @ 60 Hz 2cm/hr or 2 cm/minute (at 50 Hz = 1.67 cm/min or 1.67 cm/hr). Internal line voltage selection for 100/120 V, 220 V or 240 V. Power burden: 27 VA. Power input; 3-wire IEC connector. (Uses standard IEC cords). With 2 sets spare pens, 2 boxes charts, a few spare parts, carrying case; Used, very good condition; $100.

UNIVERSAL IEC LINE CORD SET. Each 6-foot line cord has a standard female 3-wire IEC connector at one end, and a male connector at the other; one of each from the following list:

Australia 3-pin w/ground male pin
Denmark 3-pin w/ground male pin
Europe 2-pin w/ground female & strap

MAGNETIC SURVEY INSTRUMENTATION

Prices include shipping in Lower 48.

MEDA uMAG-02WB Handheld, battery-operated digital fluxgate magnetometer. Sensitivity: +/- 0 - 20.00 - 200.0 - 2000 milliGauss F/S, DC-400 Hz (-3dB @ 400 Hz ref to DC). Analog output +/- 2.000 V F/S. Linearity .02% or better. Absolute accuracy +/- 0.5% or better, traceable to NIST. With 10 meter cable and transverse probe, 6 spare batteries in storage case, multiple-battery harness for up to 8 batteries (approximately 12 days continuous operation), analog output cable w/BNC (to oscilloscope input), manual, calibration certificate, transit case. In new condition. Current price from manufacturer is $900. Sell at $450. Three available: all three, $1300 including 3-channel chart recorder (see below).

DEXSIL MAGNUM 310. Handheld, battery-operated, micropro-cessor based 3-axis digital induction milliGaussmeter. Auto-ranging; 0.04-9.96 milliGauss (+/- 2%), 10 - 99.6 milliGauss (+/- 5%), 100-996 milliGauss (+/- 5%), 1.00 - 10.0 Gauss (+/- 5%) for 60 Hz signals in 60 Hz mode. F/S accuracy in 3rd harmonic mode is +/- 5%. In braodband mode (40-310 Hz @ -3dB) accuracy is +/- 10%. Displays all three vector components plus resultant or resultant only. Has low battery indication and automatic shutoff. Fully self-contained. WIth carrying case, manual and calibration certificate. New price $695. Used, very good condition; $250.

LEEDS & NORTHRUP SERVO RECORDER 136-304-304-304-00-00-00-L0088-L0088-L0088-6-BV-000. Three-channel servo recorder, modified for potential inputs. Can be internally adjusted from +/- 1 millivolt F/S to +/- 2V F/S. Set at +/- 1V F/S. Chart speed @ 60 Hz 2cm/hr or 2 cm/minute (at 50 Hz = 1.67 cm/min or 1.67 cm/hr). Internal line voltage selection for 100/120 V, 220 V or 240 V. Power burden: 27 VA. Power input; 3-wire IEC connector. (Uses standard IEC cords). With 2 sets spare pens, 2 boxes charts, a few spare parts, carrying case; Used, very good condition; $100.

UNIVERSAL IEC LINE CORD SET. Each 6-foot line cord has a standard female 3-wire IEC connector at one end, and a male connector at the other; one of each from the following list:

Australia 3-pin w/ground male pin
Denmark 3-pin w/ground male pin

I still have this receiver...apparently it's pretty rare...has 6m and 2m built in; front panel badge reads "VHF". Also have matching speaker. Both are about a 7 or 8 on a 10 point scale...

I'll price it at $175 with the speaker, but would prefer to trade it for something. I was wanting a nice Vibroplex Original Deluxe bug, or a Collins mike, or a Geochron or something like that. Maybe a Collins dummy load, or a 500 watt Bird, or something...I'll add bucks to get something I want.

Thanks,

Travis N5AY

Just picked up a National receiver at a yard sale. looks similar to an NC-80 but...no AVC switch below main tuning, Says "National" on the dial but no model # present. Have looked at the in print receiver anthologies but have not found this radio. Someone took out the main tuning but there are "velvet vernier" parts loose in the cabinet. Under chassis appears to be untouched with all nasty paper caps in place but whole set extremely clean. Dial reads right-left, set is AC/DC 530-30, ant connection on side, phones on back. A variation of the NC-80/81?

I don't know when it was introduced or how it works, but CRTs use
something called a dispenser cathode (or something like that). If you
find out anything post it so the rest of us can learn.

Good luck,

5652. R390A Easy Audio Mod

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-30 00:00:00 UTC
From: nospams@nowhere.com
Message-ID: <33b71dd3.8631738@news-3.exis.net>
Source record: 118468

Some of you may know that I restore R390A receivers as a hobby. Here is an easy "soft " (reversable) modification which I came up with that really improves the R390A audio by mellowing it out a bit.

The audio tubes, V602A and V603 are coupled with 300V, .01mfd "Vitamin Q" type capacitors. These have been found to leak causing distorted audio. The values are also tend to make the audio amplifier somewhat restrictive.

Changing these to .022 (or even .47 or .5 mfd) 400V (min) Sprague Orangedrops improves bass response and the increased voltage rating coupled with modern construction helps to keep the leaking problem from re-occuring. Do NOT use disc ceramic capacitors!

Parts needed:
2- .022mfd Sprague Orangdrop Capacitors
1- 560 ohm, 2 Watt resistor

Unplug the receiver and remove the bottom cover. Locate the audio sub chassis (it's on the bottom of the radio and has 5 tubes on it) . Remove the audio chassis by pulling off the 2 modular plugs and loosening the 4 green captive phillips screws. Lift the audio chassis onto an appropriate workspace and turn it upside down.

There is a 2" wide curcuit board which runs 2/3 the long length of the audio chassis. Locate C-604, C-605 and R-614 which are mounted on that pc-board. Remove the two screws holding the board to the audio chassis then fold it with the cables off to the side in order to expose the bottom of the board.

Remove C-604, .01 mfd 300v Vitamin Q
Remove C-605 .01 mfd 300v Vitamin Q
Remove R614 560 ohm 1 watt resistor

Replace C-604 and 605 with the orangedrop capacitors. Be sure to first make sure the capacitors do not take up too much vertical space and not allow the audio deck to properly seat in the main chassis. If space is a problem, try mounting the capacitors on the opposite side of the pc board from which they were removed. This is especially true if you use .47's or .5's or use 600V capacitors.

Replace R614 with the 560 ohm 2 watt resistor.

Replace the PCB, put the audio chassis back in the receiver and re-assemble the radio.

During operation, you will immediately notice that there is a more mellow sound to the receiver. This is due to the increased bass response allowed by the larger value capacitors. If you check the 560 ohm resistor, R614, you will probably see that it has changed value going higher in resistance. I have seen them go to 700-800 ohms.

The receiver can be put totally back to "stock" in a matter of minutes by simply reversing the process.

- -

Redistribution ok with proper credit.

Hi Gang:

I have a fair quantity of 6BH6 tubes. These are used in the R-390, Johnson Viking Mobile and other radio equipment. They are Sylvania or RCA manufacture and are new but unboxed. A well-known vintage radio supply company sells these for >$3.00 plus a hefty packing and shipping fee but I will sell them for $1.00 each, 6 for $5.00 and 15 for $10.00 plus $1.00 per package to HELP with the packing and shipping costs. I will test them before sending them and guarantee them to be good.

If interested please reply by e-mail.

73,

Michael Crestohl, W1RC

I'm probably going to get some flak for being a crotchety old dinosaur (sort of like our boatanchors) but I think individuals who advertise such items for sale as Icom outfits, Yeasu outfits, telephone equipment and the like are posting in the wrong place. As an HT-37/Hammurlund 180C owner (we're talking *real* boatanchors here) I think the "newer stuff" has a place on the other amateur-related groups, but not here.

Source record: 118481

I have a Halli. SX-73/R-274 receiver that works well. The front panel and knobs are all original and excellent. The dial lock is missing. I also have an original (new) TM. I am curious as to the current range of values prior to actual committment to sell. I'd appreciate any intel anyone can provide. Thanks K3HVG

I paid $200 for mine a couple of months ago. It had two none original knobs, none original meter and missing dial lock. After alignment and cleaning of the gear train it works great on all bands except 6 where the sensitivity falls off severely. I rate the appearance as an 8 on a scale of 10. I'm still looking for the original tuning knob (with built in slip clutch), dial lock and meter.

Source record: 118489
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

EICO model 711 Space Ranger tube-type communications receiver. Raymond Moore's book says EICO only made one tube receiver (this one) and only made it for one year (1967). This one is in excellent+ cosmetic condition and receives well on all bands. Covers 550 khz - 30 mhz in three bands. Bandspread and BFO. Looks a lot like a Heath GR-64 but this one has a really nice glass dial cover rather than plastic like the Heath. I have all the orig. EICO branded tubes (two are out of the radio as they were duds). No manual.

$150 plus shipping.

email: doragsda@oboe.calpoly.edu

5674. FORSALE - Electro Voice 727 SR Ceramic Microphone

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-30 00:00:00 UTC
From: jpl@qc10.ho.lucent.com

Source record: 118490

I have an Electro Voice ceramic microphone (Model 727 SR) that I'd like to sell (or swap for a Kenwood desk mike -- MC 50, MC 60A, etc). It looks like it's in mint shape but it's missing the cord (it was cut off!) and I have no way of testing it.

Make offer!

Source record: 118491

Posted for a customer of mine:

For Sale:
RCA ACR-111 communication receiver.

It's from 1937, a big dark beast.

15 metal octal tubes.

2 RF amp stages, 2 IF amp stages, crystal filter, pentode noise limiter,
DC coupled AVC amp, push-pull 6F6's for audio output to a 12 inch speaker.

Modular RF chassis with separate main and bandspread capacitors.

Complete with original 2-tone heavy-duty cabinet.

Original speaker mounted in unoriginal box.

Just restored (by me). Mostly just needed the dust blown off and
all the leaky and dried out capacitors replaced.

About a 8.5 out of 10 in appearance and performance.

No exact going price determined due to its scarcity. Please make an offer
if interested.

Questions / $$$ offers? Write to grg@umn.edu. Thanks.

5676. Drake RCC4 Xtal Calibrator Pinouts and Voltages

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-30 00:00:00 UTC
From: chantz@well.com
Message-ID: <5p953p$3mn$1@was.hooked.net>
Source record: 118492

Hi! I was lucky enough to receive a Drake RCC4 xtal calibrator board, which I think comes from a Drake R4 or R4A receiver. I'd like to fire this up for use in a non-Drake boatanchor.

The board has a four-prong plug and uses a few transistors and an IC. I've thus far been able to identify ground and RF out :) but I'm darned if I can figure out what voltages it is supposed to take. Does anyone know what this usnit uses voltage wise? It may be that it is supposed to be powered by filament current but the diode seems to be a samll-signal, not power type.

Thanks!

The "Radios By Hallicrafters Book" by Chuck Dachis suggests $250 - $450
cost was $975 in 1952.

Great Book -- Great Radios
Rod in San Diego (SX-100 and S-40B)

Anyone know about this particular gem? Looks similar to an SX-16/17 with German style silver dial. Only goes up as far as 30 meters. Any help will be appreicated. Cal.

5680. WTB: Knight receiver and VFO

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-30 00:00:00 UTC
From: kr4wm@sccoast!.net
Message-ID: <MPG.e223cf0452310739896a5@news.infoave.net>
Source record: 118496

I recently obtained a Knight T-60 transmitter, which covers 80-6 meters. This is perfect for me, because I mostly want to work 6 meter CW. However, the fellow who had it didn't have the receiver or VFO to go with this "compact" boat anchor. So, I'm asking for help in locating a matching receiver (if it also covered 6 meters?), the VFO for the transmitter, maybe a microphone (don't know what it may have used for one of those), manual, accessories, etc. I have a Knight R-100A that I could be talked into trading, although it's not very good cosmetically. It receives stations, so it _is_ in working condition. Thanks for any advice/offers. This is a "project on the cheap", so please don't send me addresses of commercial businesses who specialize in manuals, antique parts, etc. I'm looking for kind (maybe generous is the word I should use) souls who'd rather see this stuff on the air than in a closet. JPG scans of a manual on the T-60 e-mailed to me would be kindly accepted ;-). Thanks & 73 to all, Web Williams, KR4WM in Myrtle Beach, SC

NOTE: Please remove the "!" from my e-mail address to reply. I've been getting ENTIRELY too much junk e-mail lately, and this method of adding an extra character when posting to newsgroups seems to stop a great deal of it.

5681. WTS: Swan 350D 80/40/20/10 HF Xciver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-06-30 00:00:00 UTC
From: Matthew Kleinmann <matthew@chiapet.geo.cornell.edu>
Message-ID: <33B7F320.64880EEB@chiapet.geo.cornell.edu>
Source record: 118497

I have a Swan 350D for sale. This is a pretty nice radio, much nicer then the 350. This has an intragated LED frequency display, and a much more modern look. I would place it above one of the Yesu or Kenwood's without the digital readout, and perhaps a notch or two below say a Kenwood 820S which is what I have now as far as features go. I do not have a manual for it, and I am not sure how to tune it up or set it up for transmitting. I am not even 100% sure that I want to sell it right now, but make me an offer if you have any interest. I may also be open for a trade.

Have you ever even heard of it??? My first "real"
radio after my Knight Space Spanner, circa 1960. Used it
till '65 when I sold it for college expenses (what an idiot
I was!). Email me if you have any leads on it. Heck,
email me if you've even heard of this model. Had about
13 tubes in it. Weighed enough to anchor a battleship.
Thanks,
Jim.
